Morning Briefing — 29 June 2026

Generated: ~06:00 BST | London timezone | Pre-European market open (Monday)

Data collected automatically from public sources. Verify all figures before acting. Items marked *n/a* could not be confirmed in this session.

2. IMPORTANT NEWS

Alphabet joins Dow Jones Industrial Average at today's open — Verizon exits after 22 years. Source: CNBC, Yahoo Finance.
Alphabet (~$350/share) carries roughly 8× the index weight of Verizon (~$45) in the price-weighted Dow. Six of 30 components are now mega-cap tech — the highest ratio in the index's 130-year history. Forces mechanical index-fund rebalancing at the bell and will amplify Alphabet's influence on Dow performance going forward.

Strait of Hormuz reopening: US-Iran MOU crushes oil. Source: CNBC, Reuters.
A US-Iran memorandum of understanding on nuclear/sanctions relief restored Persian Gulf exports to roughly 75% of pre-conflict levels. WTI crude fell to $68.86 — its lowest since early 2026, down 22.2% in four weeks. Brent near $72. Structural energy sector re-pricing underway. OPEC+ response is the key tail risk.

Core PCE due tomorrow (30 June) — consensus 3.4%, highest since October 2023. Source: BEA, CNBC, Fed SEP June 2026.
The June FOMC revised Q4 2026 core inflation from 2.7% to 3.3%. The Fed holds at 3.50–3.75%. A print at or above 3.4% removes any residual hope of a 2026 rate cut, pressuring rate-sensitive assets globally.

Nasdaq posts fifth consecutive losing session — AI infrastructure cost fears drive chip selloff. Source: CNBC, Fortune.
Nasdaq −4.6% on the week ending 27 June. Micron −8.5% on its worst single-session day; Intel −7.6%; AMD −6.2%. Trigger: rising semiconductor prices squeezing tech margins. IDC: global smartphone demand −13% YoY — largest annual decline on record. Apple raised MacBook and iPad prices citing chip costs. Mag7 broadly negative except Apple (+3% Friday rebound).

US NFP due Thursday 3 July — one day early ahead of Independence Day. Source: BLS, Trading Economics.
May payrolls: +172K vs 85K consensus. A strong June print keeps the Fed on hold; a soft print reopens July cut pricing. With PCE also due Tuesday, the week front-loads nearly all Fed-relevant data before a holiday curtailment.

3. EUROPEAN FUTURES — PRE-OPEN

Data collected ~06:00 BST

INDEX	FUTURES LEVEL	IMPLIED MOVE VS FRI CLOSE	CONTEXT
Euro Stoxx 50	6,326	**+1.8%**	Opened at 6,329 in early futures session; tracking Nikkei record high
DAX	24,994	**+1.03%**	Asia lead + oil price relief for energy importers supporting German industrials
CAC 40	*n/a*	*n/a*	Weekly: −0.43% through Friday; energy/luxury watch amid oil/China demand signals
FTSE 100	*n/a*	*n/a*	Weekly: +1.40% through Friday; oil price drag on BP/Shell will cap upside today
S&P 500 futures	*n/a*	*n/a*	Last cash close 7,354.02; Alphabet/DJIA rebalance key event at open
Nasdaq futures	*n/a*	*n/a*	Last cash close 25,297.62; chip sector direction sets session tone

4. YESTERDAY'S CLOSES — EUROPEAN INDICES

Last trading session: Friday 27 June 2026. June 28 was Sunday — markets closed.

INDEX	CLOSING LEVEL	DAILY CHANGE	WEEKLY CHANGE
Euro Stoxx 50	6,212	**−0.9%**	*n/a*
DAX	~24,741 *(est.)*	*n/a*	**−1.26% wk**
CAC 40	~8,385 *(est.)*	*n/a*	**−0.43% wk**
FTSE 100	*n/a*	*n/a*	**+1.40% wk**

Estimated levels derived from futures data and weekly % changes where daily closes were not confirmed. Verify at open.

5. US MARKETS — FRIDAY 27 JUNE 2026

INDEX	CLOSE	DAILY CHANGE	WEEKLY CHANGE
S&P 500	7,354.02	−0.05%	−2.0%
Dow Jones	51,876.11	−0.09% (−44.51 pts)	+0.6%
Nasdaq Composite	25,297.62	−0.24%	−4.6%

Session tone: Fifth consecutive losing session for Nasdaq. Broad indices nearly flat on the day, masking severe sector divergence. **Leading sectors:** Industrials (+2.19%), healthcare (+1.49%), materials (+1.39%). **Lagging sectors:** Consumer discretionary (−1.78%), consumer staples (−1.08%), communication services (−1.02%). Chip stocks resumed selling after Thursday's brief bounce: Micron fell >5%, Intel −7.6%, AMD −6.2%. Apple rebounded +3%. Alphabet and Nvidia declined within Mag7 while others held or gained.

Key takeaway: The weekly Dow/Nasdaq divergence (+0.6% vs −4.6%) is the most extreme since April. The market is rotating out of AI/tech and into defensives and industrials. AI infrastructure cost credibility — rising chip prices plus a 13% YoY smartphone demand collapse — is the core concern eroding confidence in the semiconductor supercycle.

6. ASIAN MARKETS — OVERNIGHT SESSION (29 JUNE 2026)

INDEX	LEVEL	CHANGE	NOTE
Nikkei 225	72,354	+1.55%	Fresh all-time closing high; AI & semiconductor optimism; yen weakness supports exporters
Hang Seng	*n/a*	*n/a*	Lagged regional peers; weak China consumption data weighing
Shanghai Composite	*n/a*	*n/a*	Returned from 3-day Dragon Boat Festival break; absorbed US-Iran MOU and Wall Street stabilisation
Kospi	*n/a*	*n/a*	Chip sector watch; Samsung and SK Hynix exposed to memory price dynamics

Overall tone: Positive, led by Tokyo's record print. Asia rebounded on accumulated global cues from the week: US-Iran oil supply relief, Wall Street's Friday stabilisation, and continued AI/semiconductor optimism in Japan. China return from holiday added some uncertainty; weak consumption data a structural drag. The divergence between Japan (record high) and China/Hong Kong (lagging) is a key theme for EM positioning.

7. COMMODITIES

Data as of Friday 27 June 2026 close / early Monday 29 June

COMMODITY	LEVEL	CHANGE	CONTEXT
Brent Crude	~$72.00/bbl	**Near 4-month low**	US-Iran MOU accelerates Hormuz shipping; Gulf exports ~75% of prewar. OPEC+ cut risk is key upside tail.
WTI Crude	$68.86/bbl	**−22.2% in 4 weeks**	Lowest since early 2026. Supply shock from Strait of Hormuz re-opening. Below many E&P breakevens.
Gold	$4,067.72/oz	**−0.47% Friday**	Edged up on PCE in-line data earlier in week; safe-haven demand moderating as risk-on mood from US-Iran deal.
Natural Gas (NYMEX)	*n/a*	**−3.35% Friday**	Long liquidation on expiry of July contract (NGN26); last day of front-month trading Friday.
Copper (LME)	*n/a*	*n/a*	2026 annual avg forecast ~$12,100/t; concentrate shortages and limited new mine supply underpin.

8. RATES & FX

Data as of late Friday 27 June / early Monday 29 June

INSTRUMENT	LEVEL	CHANGE / NOTE
US 10Y Treasury yield	~4.39%	Near 7-week low; dipped below 4.40% Thursday before stabilising
German Bund 10Y yield	~2.924%	Near lowest since mid-March; risk-off bid + ECB uncertainty capping
US–Germany 10Y spread	~150bp	Stable; dollar-euro funding differential intact
EUR/USD	*n/a*	Recent sessions: US data failed to bolster dollar; watch PCE June 30 for direction
GBP/USD	~1.3190	Level as of June 25; UK GDP data June 30 next catalyst
DXY	*n/a*	Dollar gained following US-Iran oil collapse; competing forces: risk-on vs inflation prints

Rate context: Fed held at 3.50–3.75% at June FOMC. June SEP raised Q4 2026 core PCE from 2.7% to 3.3%; end-2027 median dot at 3.6%; end-2028 at 3.4%. No cuts priced for 2026. ECB QT underway; gross Eurozone sovereign issuance projected near EUR 1.4 trillion in 2026 driven by German and French fiscal deficits. Rising refinancing costs especially at the 5Y tenor.

9. DCM — PRIMARY BOND MARKET

YESTERDAY'S ISSUANCES (WEEK OF 22–27 JUNE 2026)

Primary market operated at summer slowdown pace. EUR and USD IG combined new issuance totalled approximately $27bn for the prior week, slightly below weekly projections. Average orderbook cover: 3.5× subscribed. Specific deal-level data (issuer, size, coupon, spread, IPT-to-pricing tightening) were not confirmed from searches conducted in this session. *Individual deal terms: n/a — source from IFR Markets or GlobalCapital at open.* Financial Institutions continued to underperform Industrials and Utilities in secondary spread performance.

PIPELINE / EXPECTED THIS WEEK (29 JUNE–3 JULY 2026)

Window technically open. Supply expected to be thin. Issuers are cautious ahead of two high-impact data prints: core PCE (June 30) and NFP (July 3). US markets are shut Friday 4 July (Independence Day), which effectively closes the transatlantic primary window from Thursday afternoon. Summer seasonality is suppressing new mandates from both SSA and corporate issuers. *No specific mandated deals confirmed in this session — check IFR/GlobalCapital morning wires.*

KEY SPREADS

INDEX	LEVEL (BP)	MOVE (BP)	DIRECTION
iTraxx Main (5Y)	*n/a*	*n/a*	*n/a*
iTraxx Crossover (5Y)	*n/a*	*n/a*	*n/a*
CDX IG (5Y, NA)	*n/a*	*n/a*	*n/a*
Avg Euro Corp IG spread	*n/a*	*n/a*	*n/a*

Live iTraxx/CDX spread data not captured in this session. Obtain at open via Bloomberg CDSW, Refinitiv, or ICE settlement prices.

COMMENTARY

Primary tone is cautious but not closed. Issuers that front-loaded supply into April–May are comfortable on the sidelines. The core PCE print tomorrow and NFP Thursday represent the two decisive risk events before the July 4 holiday cuts the transatlantic primary window. Demand from insurance and pension accounts remains solid for long-duration paper. Energy sector issuers face a structural headwind: oil at $68–72 compresses the yield-pick rationale relative to equity issuance and limits appetite from energy credit desks. Financials remain under scrutiny on sub-prime and private credit stress signals from Q1 performance. Industrials and utilities are the preferred sectors for new paper if the window opens mid-week post-PCE.

10. ECONOMIC CALENDAR — WEEK OF 29 JUNE 2026

LONDON TIME	DATE	REGION	INDICATOR	CONSENSUS	IMPORTANCE
Market open	Mon 29 Jun	US	Alphabet joins DJIA; Verizon exits	—	MEDIUM
07:00	Tue 30 Jun	Germany	Retail Sales (May MoM)	*n/a*	MEDIUM
07:00	Tue 30 Jun	UK	GDP Final (Q1 2026)	*n/a*	MEDIUM
13:00	Tue 30 Jun	Germany	CPI Flash (June YoY)	*n/a*	HIGH
13:30	Tue 30 Jun	US	Core PCE Price Index (May YoY)	3.4% (prev. 3.3%)	HIGH
02:00*	Wed 1 Jul	China	Official Manufacturing PMI (June)	*n/a*	HIGH
10:00	Wed 1 Jul	Eurozone	HICP Inflation Flash (June YoY)	*n/a*	HIGH
13:15	Wed 1 Jul	US	ADP Employment Change (June)	*n/a*	HIGH
15:00	Wed 1 Jul	US	ISM Manufacturing PMI (June)	*n/a*	HIGH
tbc	Wed 1 Jul	UK	BoE Governor Bailey speech	—	MEDIUM
02:30*	Tue 30 Jun	Australia	RBA June Meeting Minutes	—	MEDIUM
13:30	Thu 3 Jul	US	Non-Farm Payrolls (June) — **early release**	~130K est.	HIGH
All day	Fri 4 Jul	US	Independence Day — US markets closed	—	MEDIUM

*Beijing/Sydney time, not London. Tankan Large Manufacturers Index (Japan) also due Tuesday.

11. CORPORATE EVENTS & EARNINGS

COMPANY	EVENT	DATE / TIME	CONSENSUS	KEY WATCH
Alphabet (GOOGL)	Joins DJIA at market open	Mon 29 Jun, open	—	Index-fund rebalancing buying pressure vs AI cost overhang; ~8× higher weight than Verizon
Verizon (VZ)	Exits DJIA at market open	Mon 29 Jun, open	—	Mechanical selling from index trackers; exiting after 22 years in Dow
Nike (NKE)	Q4 FY2026 earnings	Tue 30 Jun, after close	EPS \$0.13 (−7.1% YoY); Rev \$10.85bn (−2.2% YoY)	EMEA Rev −1%, Greater China −17%, N. America +9%. Q1 FY27 guidance crucial. Tariff GM headwind 175–225bp.
Honeywell (HON)	Continues in DJIA post-Aerospace spin-off	Ongoing	—	Will operate as "Honeywell Technologies"; Aerospace business not included in index

26 earnings reports scheduled today per EarningsWhispers; none market-moving pre-open. Q2 2026 earnings season begins in earnest second week of July. S&P 500 Q2 EPS growth consensus: +22.0% (FactSet). That figure will be stress-tested by AI cost and tariff data in Nike/July reports.

12. STOCKS TO WATCH

COMPANY / TICKER	REASON	PROBABLE DIRECTION
Alphabet (GOOGL)	Joins DJIA — forced index-fund buying at open. Counter-force: AI infrastructure cost narrative weighed on GOOGL all of last week (down with Mag7 except Apple).	**Lift at open; watch sustainability**
Verizon (VZ)	Exits DJIA — mechanical index-fund selling. Low price-weight ($45) means limited absolute Dow impact, but VZ-specific flows negative.	**Negative at open**
Nvidia (NVDA)	Underperformed Friday alongside chip sector; AI infrastructure cost fears; key bellwether for whether tech sell-off continues or stabilises.	**Caution; watch at open**
Micron (MU)	Fell >5% Friday despite strong Q3 earnings Thursday (‘memory tax’ narrative taking hold). Memory chip demand vs AI cost compression is the key debate.	**Ongoing pressure**
Apple (AAPL)	+3% Friday rebound after MacBook/iPad price increase news the day before. Tariff and chip cost passthrough to consumers. Watch for sustained recovery or second-day fade.	**Volatile; directionally uncertain**
Melrose Industries (MRO.L)	GKN Aerospace pure-play; +2.83% on 24 June. Defence spending and aircraft production ramp structural tailwinds. Watch European open for continuation.	**Positive bias; defence theme**
BP (BP.L) / Shell (SHEL.L)	Brent ~$72, WTI $68.86 — multi-month lows. Revenue and cash flow estimates under downward revision. FTSE 100 energy weight (~10%) means sector drag on index.	**Sector headwind; negative bias**
Nike (NKE)	Earnings after close June 30. EMEA −1%, China −17%, NA +9% in prior quarter. Tariff-driven GM headwind flagged. Q1 FY27 guidance is the event risk.	**Neutral pre-report; event risk Tuesday**
European banks (BNP, SAN, BARC)	DCM slowdown into summer; oil-sector loan exposure watch at $69 WTI; credit spread direction key for net interest margin and trading revenue outlook.	**Mixed; energy exposure negative**
Saudi Aramco / global oil majors	US-Iran deal re-prices the Gulf supply outlook. $72 Brent vs $80+ earlier in 2026 compresses the dividend sustainability math for high-yield energy names.	**Sector pressure; OPEC+ response key**

13. MACRO / CORPORATE / POLITICAL HIGHLIGHTS

MACRO

1. Fed holds, revises inflation up. Fed funds rate at 3.50–3.75% (June FOMC hold). Core PCE Q4 2026 forecast revised from 2.7% to 3.3%. End-2027 median dot 3.6%; end-2028 at 3.4%. No cuts priced for 2026. Core PCE print June 30 (consensus 3.4%) is the immediate test.

2. Labour market robust but NFP divergence risk. May NFP: +172K vs 85K expected. June report due July 3 (early). Strong labour data complicates the rate-cut case; a soft print would immediately revive it. ADP and ISM Manufacturing (both July 1) provide a preview.

3. European fiscal expansion pressures rates. Gross Eurozone sovereign issuance ~EUR 1.4 trillion in 2026. Germany and France driving net-net issuance to record levels. ECB QT reduces the bid; 5Y tenor most exposed to supply-demand imbalance. Rising refinancing costs a headwind for EUR corporate spreads.

4. China demand signal weak. Dragon Boat Festival return to market with consumption data disappointing. Global smartphone demand −13% YoY (IDC). Weak China consumption is a structural drag on copper, luxury goods, and European exporters.

CORPORATE

1. Alphabet joins Dow. Landmark shift in Dow composition. Six mega-cap tech stocks now in 30-component index. Alphabet's AI, cloud, advertising, and autonomous vehicle exposure adds breadth. Index construction reflects tech's dominance in the US economy.

2. Apple and Microsoft raise product prices. Both cited chip and component cost inflation, partly tariff-driven. Consumer electronics margin pressures are passing through to end prices. Watch consumer confidence response if price increases stick.

3. Nike Q4 FY26 on June 30. EMEA −1%, Greater China −17%, North America +9%. Tariff-driven gross margin compression of 175–225bp. Guidance for Q1 FY27 (August print) will be the signal for whether consumer pullback is accelerating.

POLITICAL / GEOPOLITICAL

1. US-Iran MOU — energy market structural re-pricing. Nuclear/sanctions deal progress unlocked accelerated Strait of Hormuz shipping. Gulf crude exports restored to ~75% of pre-conflict levels. WTI −22.2% in four weeks. Key risk: OPEC+ emergency cut mechanism; US domestic E&P breakeven risk below $65 WTI.

2. OpenAI IPO delay concerns. Reports of uncertainty around timing are adding to AI sector sentiment weakness. A delay would remove a key catalyst for re-rating high-growth AI names and compresses risk appetite in the segment.

3. Global defence spending structural ramp. NATO 2% GDP commitments, Germany's EUR 100bn+ defence fund, and geopolitical instability sustaining multi-year order books at Airbus, BAE Systems, Rheinmetall, and Melrose/GKN Aerospace. Not a 2026 data event but a persistent portfolio tailwind.

14. KEY THEMES — TOP 5 BY HORIZON

TODAY'S TOP 5 (29 JUNE 2026)

#	THEME	MARKET STAKES
1	**Alphabet enters the Dow at open**	Index-fund rebalancing sets early session tone; tech/non-tech rotation visible in Dow vs Nasdaq differential.
2	**Chip sector stabilisation or continued sell-off**	After five straight Nasdaq losing sessions, any bounce or continuation signals whether AI capex confidence can recover before PCE data.
3	**Oil at $68–72: energy sector pricing**	BP, Shell, and European energy are facing significant earnings headwinds. The FTSE 100's heavy energy weighting means UK equities diverge from DAX/SX5E trajectory.
4	**Asian positive lead holds into European session**	Nikkei at record high; DAX futures +1.03%; Euro Stoxx +1.8%. Whether this momentum carries or fades into core PCE caution defines intraday range.
5	**Dollar direction vs risk-on from US-Iran relief**	Competing forces: risk-on lifts EUR/GBP; oil collapse typically strengthens dollar. FX vol likely elevated; EUR/USD and DXY ranges critical for European equity translation.

THIS WEEK'S TOP 5 (29 JUNE – 4 JULY 2026)

#	THEME	MARKET STAKES
1	**US Core PCE (Tue 30 Jun, 13:30 BST)**	Consensus 3.4% YoY — highest since Oct 2023. A hot print confirms no 2026 cuts; cold print revives July pricing and triggers a bond rally and growth-stock recovery.
2	**US NFP (Thu 3 Jul, 13:30 BST)**	Released one day early due to July 4 holiday. May was +172K. Continued strength cements Fed hold; below 100K re-opens rate-cut debate and moves duration markets sharply.
3	**Eurozone HICP flash inflation (Wed 1 Jul)**	ECB QT pace and rate path dependent on June CPI. A surprise above 2.5% pushes Bund yields higher and widens European credit spreads; below 2.0% would be a significant dovish surprise.
4	**Nike Q4 FY26 earnings (Tue 30 Jun, after close)**	First major bellwether ahead of July earnings season. Guidance on consumer, tariff impact, and China recovery pace will set the tone for retail/discretionary positioning.
5	**US-Iran MOU implementation — oil price floor**	WTI at $68.86: watch for OPEC+ emergency signaling or Iran deal complication that would spike oil and reverse the energy sector re-pricing sharply.

THIS MONTH’S TOP 5 (JULY 2026)

#	THEME	MARKET STAKES
1	**Q2 2026 earnings season (mid-July)**	FactSet consensus: +22% S&P 500 EPS. AI capex, tariff margin compression, and weak China demand are the three tests for whether this multiple holds through reporting season.
2	**July FOMC rate decision**	PCE and NFP data this week set the tone. Hold is expected; market pricing of future cuts (or the absence of them) will reprice the entire rate curve and equity risk premium into summer.
3	**Oil market re-equilibration post-US-Iran**	OPEC+ formal response to $68 WTI is the critical variable. A credible production cut would rapidly reprice Brent back above $80 and reverse all energy-sector earnings revisions.
4	**AI infrastructure investment cycle credibility**	Rising chip costs, smartphone demand −13% YoY, and margin pressures test the hyperscaler capex supercycle thesis. Hyperscaler guidance in July earnings (Microsoft, Alphabet, Amazon) is the defining event.
5	**European defence and aerospace order execution**	NATO spending commitments and Germany’s defence fund deployment are driving a multi-year structural order book build at BAE, Airbus, Rheinmetall, and Melrose/GKN. The July reporting cycle will show initial conversion rates.

15. KEY TRENDS TO WATCH

1 DAY — WHAT MOVES TODAY'S SESSION

1. European open gap fill vs fade. DAX futures at 24,994 (+1.03%) and Euro Stoxx at 6,326 (+1.8%) reflect Asian positive lead. Watch whether this holds through the morning or fades as pre-PCE caution builds. Energy stocks (BP, Shell) are a cap given Brent at $72.

2. Chip sector at US open. Nvidia, Micron, AMD — the fifth Nasdaq losing week has stretched short-term oversold conditions. Any stabilisation could trigger a technical bounce; absence of buyers means further rotation to defensives.

3. Alphabet and Verizon at open. Pure mechanical flows: Alphabet buying, Verizon selling. First-day performance of Alphabet as a Dow component will get disproportionate media coverage and may amplify direction.

4. Oil price intraday. WTI at $68.86 with OPEC+ response risk. Any statement from Saudi Arabia or UAE on potential production cuts would spike crude and reverse energy sector direction within the session.

1 WEEK — KEY APPOINTMENTS AND THEMES

1. Core PCE (June 30) is the dominant macro event. 3.4% consensus. Hot print (above 3.5%) would be the week's dominant risk-off driver. Cold print (below 3.2%) would be the surprise rally catalyst. Either direction creates high volatility across rates, credit, and equities.

2. NFP front-loaded to Thursday 3 July. With July 4 closing markets Friday, all of the week's major data is front-loaded. Thursday close will be the last major positioning opportunity before a one-day liquidity gap.

3. Eurozone HICP and Germany CPI (1 Jul / 30 Jun). ECB's QT pace depends on whether Eurozone inflation is converging to 2% target. Energy price deflation from oil collapse may mechanically push headline lower; core ex-energy is the key read.

4. BoE Bailey (1 Jul). Any signal on UK rate path or currency management in the context of GBP/USD at 1.32 and oil price disinflation.

1 MONTH — MAJOR DEADLINES AND UNDERLYING TRENDS

1. Q2 earnings season from ~14 July. Banks open the season. AI capex spend data from hyperscalers (late July) will be the defining confirmation or refutation of the chip cost narrative. FactSet's +22% EPS estimate is ambitious against current headwinds.

2. OPEC+ production cut emergency decision. $68–72 Brent is below the fiscal breakeven for most Gulf states. A formal or informal OPEC+ output reduction is the highest-probability large-move tail event for energy markets in July.

3. July FOMC decision. PCE + NFP this week set the prior. The market needs two consecutive soft inflation prints to revive 2026 cut pricing; one soft print alone is unlikely to move the FOMC.

4. AI capex guidance from hyperscalers. Microsoft, Alphabet, Amazon, and Meta all report in late July. Their data centre and GPU spend commitments are the single most important variable for Nvidia’s valuation and the broader semiconductor sector. Confirmation of cuts would reverse months of AI premium pricing in tech equities.
