

Morning Briefing

Friday, 19 June 2026 • Generated approx. 06:30 BST (London) • **Pre-European open** • Dominant themes: **US Juneteenth (markets closed)** | **Nikkei 52-week high** | **FOMC hawkish hangover** | **US-Iran deal / Intel-Apple chip pact**

HOLIDAY ALERT — US equity and bond markets **CLOSED** today (Juneteenth, June 19). Reopen Monday June 22. Hong Kong markets also **CLOSED** (Dragon Boat Festival). European markets open on normal schedule.

2. IMPORTANT NEWS

Fed holds, Warsh signals rate hike possible in 2026 — Kevin Warsh's first FOMC meeting as Fed Chair concluded June 17. Rates held at 3.5%-3.75%. Median dot moved to 3.8% (from 3.4% in March), with 9 of 18 officials now pencilling in at least one hike this year. Policy statement dropped language indicating a bias toward cuts. Markets sold off Wednesday; partial recovery Thursday. — CNBC, NPR, Kiplinger (Jun 17-18 2026)

US-Iran interim peace deal digitally signed — Washington and Tehran have digitally signed an interim agreement ending the 2026 Iran conflict, including a commitment to reopen the Strait of Hormuz within 30 days and lifting of the US naval blockade. Ceasefire had been in place since April 2026. Brent fell to ~\$79, removing the geopolitical risk premium. IEA warned of potential supply glut (global supply +8 mb/d vs demand +2 mb/d by 2027). — Al Jazeera, Discovery Alert, IEA (Jun 17-18 2026)

Trump confirms Apple-Intel chip manufacturing deal — President Trump posted on Truth Social confirming Apple will partner with Intel to design and build chips in the US. Intel (INTC) surged 10.5% to \$133.82 on Thursday. Trump noted the US government owns ~10% equity in Intel, which he said has appreciated from \$100bn to \$600bn in total valuation. Key product targeting remains undisclosed. — CBS News, Cult of Mac, AppleInsider (Jun 18 2026)

SpaceX (SPCX) aftermarket rally continues — SpaceX shares continue to trade near post-IPO highs at ~\$174.90 (IPO: June 12, \$135/share). Investor optimism fuelled by US-Iran deal, Starlink surpassing 12M active subscribers (2x year-on-year), and \$6.4bn in new US Space Force contracts. SPCX reached all-time high \$225.64 on June 16 before cooling. — CNBC, Investing.com, Investment Week (Jun 18-19 2026)

US markets closed Friday (Juneteenth); thin European liquidity — NYSE, Nasdaq, bond markets and US futures closed today. European indices trade normally but will lack the cushion of US S&P futures as a reference anchor. Expect lighter volumes. Next US market open: Monday June 22. — Yahoo Finance, EBC Financial, Fidelity (Jun 19 2026)

3. EUROPEAN FUTURES — PRE-OPEN

Data collected approx. 06:00-06:30 BST. US futures CLOSED (Juneteenth).

INDEX	FUTURES LEVEL	CHANGE / DIRECTION	NOTE
Euro Stoxx 50	6,337	+0.4% vs prior open (~6,309)	Positive carry from Nikkei; US-Iran tailwind
DAX	<i>n/a — no confirmed pre-open level</i>	—	June 18 cash close: 24,979
CAC 40	<i>n/a — no confirmed pre-open level</i>	—	June 18 cash close: ~8,431
FTSE 100	<i>n/a — no confirmed pre-open level</i>	—	June 18 cash close: 10,382 (energy drag expected)
S&P 500 futures	CLOSED — Juneteenth holiday. Reopen Sunday evening / Monday June 22.		
Nasdaq futures	CLOSED — Juneteenth holiday.		

4. YESTERDAY'S EUROPEAN CLOSSES — 18 JUNE 2026

Closing levels as of European cash close, June 18, 2026.

INDEX	CLOSE	% CHANGE	SESSION NOTE
Euro Stoxx 50	6,300	+0.68%	Supported by Iran deal relief and tech rebound
DAX	24,979	+0.18%	Flat; industrials mixed, tech dragged by FOMC fears early
CAC 40	8,431	-0.20%	Energy and luxury names weighed
FTSE 100	10,382	-1.20%	Oil majors (BP, Shell) dragged lower on Brent slide; GBP strength added headwind

5. US MARKETS — THURSDAY 18 JUNE 2026 SESSION

Last trading day before Juneteenth. Markets CLOSED Friday June 19.

INDEX	CLOSE	% CHANGE	POINTS CHANGE
S&P 500	7,500.58	+1.08%	+80 pts
Dow Jones	51,564.70	+0.14%	+72 pts
Nasdaq Composite	26,517.93	+1.91%	+497 pts

SESSION NARRATIVE

Tone: Risk-on recovery after Wednesday's FOMC-driven selloff. Markets clawed back losses as investors digested Warsh's hawkish tilt and refocused on positives.

Leading sectors: Technology (Intel +10.5% on Apple chip deal), semiconductors (chip stocks broadly rallied on Intel/Apple announcement), communication services (SpaceX/Starlink optimism).

Lagging: Energy underperformed as Brent fell further on US-Iran deal supply fears; utilities soft on higher rate expectations from Warsh dot plot.

Key takeaway: The Apple-Intel chip deal announcement and US-Iran peace progress offset the FOMC hawkish surprise. Nasdaq led on tech momentum. S&P 500 at 7,500 represents a partial reversal of Wednesday's post-Fed losses. Next catalyst: PCE and Q1 GDP readings later in June; Micron (MU) and FedEx (FDX) earnings next week.

6. ASIAN MARKETS — OVERNIGHT SESSION, 19 JUNE 2026

Hong Kong CLOSED — Dragon Boat Festival public holiday. No Hang Seng trade today.

MARKET	LEVEL	% CHANGE	NOTE
Nikkei 225	~71,952 (intraday high)	+1.75%	52-week high; real estate, banking, textiles led gains
Hang Seng	CLOSED	—	Dragon Boat Festival. Last close: 24,312 (Jun 18, -0.7%)
Shanghai Composite	n/a	—	Data not confirmed at generation time
Kospi (S. Korea)	n/a	—	Data not confirmed at generation time

Overnight tone: **Broadly positive**. Japan led Asian session gains driven by global relief on US-Iran peace deal, technology momentum (Intel/Apple chip announcement), and carry-over optimism from Thursday's Wall Street recovery. Nikkei 225 touching a new 52-week high at 71,952 is the key overnight signal for European bulls today. The Japan session was unimpeded by the US Juneteenth closure.

7. COMMODITIES

Levels as of approx. 06:00 BST. Sources: TradingEconomics, OilPrice.com, Investing.com.

COMMODITY	LEVEL	CHANGE	CONTEXT
Brent Crude	\$79.24 /bbl	-\$0.31 (-0.4%)	US-Iran deal removes geopolitical risk premium; IEA supply glut warning weighs
WTI Crude	\$76.59 /bbl	-0.3% approx.	Intraday range \$74.60-\$79.93; bearish bias on Hormuz reopening expectations
Gold (XAU/USD)	\$4,168.65 /oz	-2.5% approx. from Wed high	Fed hawkish signal and Iran deal de-risking compress the safe-haven bid
Natural Gas	\$3.21 /MMBtu	+0.05% vs prior day	Steady; US summer demand building; LNG export flows remain firm
Copper	~\$6.40 /lb	Flat	Within June 2026 forecast range \$5.93-\$6.87; China stimulus backdrop supportive

Notable move: Brent has declined from a geopolitical risk premium well above \$80 toward \$79 on confirmation of the US-Iran peace deal. Analysts now model \$78-\$85 as a new Q4 2026 Brent range, versus prior \$90-\$95 forecasts. OPEC+ response to Iranian supply re-entry will be the key near-term variable. Energy stocks (BP, Shell, TotalEnergies) face continued headwinds.

8. RATES & FX

June 18 close / pre-open June 19. Sources: TradingEconomics, Bloomberg, Investing.com.

INSTRUMENT	LEVEL	CHANGE	NOTE
US 10Y Treasury Yield	4.46%	Flat	Steady post-FOMC; market digesting Warsh dot shift; US market closed Friday
German 10Y Bund Yield	2.93%	Flat	Spread vs US: ~153 bps; Bunds well bid amid European uncertainty
EUR/USD	1.1466	-0.31%	Euro fell on Fed hawkish signal and broad USD strength; tested below 1.15 intraday
GBP/USD	n/a	—	Estimated ~1.32-1.34 range; specific level not confirmed at generation time
DXY (Dollar Index)	~100.5	+0.3% approx.	Dollar firmed post-FOMC; Warsh hawkish tilt vs ECB on hold supports USD

Key dynamic: EUR/USD fell sharply on the Fed signalling a potential 2026 hike. The median dot now at 3.8% vs ECB rates anchored lower represents a widening rate differential in USD's favour. The euro briefly dipped below 1.15, a level last seen in late March. EUR/USD direction today will be driven by European data and any ECB commentary, with no US market reference.

9. DCM — PRIMARY BOND MARKET

YESTERDAY'S ISSUANCES (18 JUNE 2026)

Confirmed new corporate issuances from June 18 could not be sourced at generation time from public wires. Specific deal terms should be verified via Bloomberg or IFR before markets open.

Note: ISS Global A/S EUR 500m 0.875% bond matured June 18, 2026 — this is a maturity, not a new issue.

EU high-yield corporate bond issuance is running 26% ahead of the prior year pace as of mid-June 2026, per ICMA data. Strong technical backdrop has underpinned primary market activity through Q2.

PIPELINE / EXPECTED TODAY (19 JUNE 2026)

No confirmed new mandates or announced deals sourced at generation time for today. Friday sessions with a US holiday tend to see minimal or no primary supply. Any mandates expected for next week should emerge Monday.

European issuers likely held back pre-FOMC. The post-Warsh environment may delay new issuance until clarity on rate trajectory improves. Watch for SSA names (EU, KfW, EIB) or high-grade industrials opportunistically returning next week.

KEY CREDIT SPREADS

INDEX	LEVEL (BPS)	MOVE	DIRECTION
iTraxx Europe Main	<i>n/a</i>	—	<i>Not confirmed at generation time</i>
iTraxx Crossover	<i>n/a</i>	—	<i>Not confirmed at generation time</i>
CDX IG (US)	<i>n/a</i>	—	<i>Not confirmed at generation time</i>
Avg Euro Corp IG Spread	<i>n/a</i>	—	<i>Not confirmed at generation time</i>

DCM COMMENTARY

The primary market window is effectively shut today. A US holiday Friday, combined with the FOMC shock from Wednesday, creates a pause in supply momentum. The Warsh hawkish pivot raises new execution risk for borrowers: investors will demand spread concessions to price through uncertainty about the rate path. The positive Iranian news may partially offset, as Iran deal relief compresses credit risk premia in energy and emerging market names. Conditions for next week's window will depend heavily on how spreads settle post-holiday and whether the Fed narrative stabilises. SSA, sovereign, and high-grade issuers (industrials, transport, energy) are best positioned to exploit any re-open. HY will remain cautious until credit spread levels are clearer. Full market return Monday June 22.

10. ECONOMIC CALENDAR — 19 JUNE 2026

US data releases suspended today (Juneteenth federal holiday). Major US data resumes from Monday June 22.

TIME (BST)	REGION	INDICATOR	CONSENSUS	IMPORTANCE
All day	US	Juneteenth — all US market data suspended	—	HIGH
All day	HK	Dragon Boat Festival — HK markets closed	—	MED
n/a	Eurozone	No major confirmed releases today	—	LOW
n/a	UK	No major confirmed releases today	—	LOW

Upcoming (late June): US Q1 2026 GDP final revision and May PCE price index are the next major data anchors, expected in the coming week or two. These will test whether the Fed's hawkish pivot is validated by actual data. S&P 500 Q1 2026 EPS growth of 28.4% (highest since Q4 2021, per FactSet) provides positive earnings backdrop heading into Q2 season.

11. CORPORATE EVENTS & EARNINGS

COMPANY / TICKER	EVENT	NOTE
Intel (INTC)	Post-announcement follow-through	Apple-Intel chip deal confirmed by Trump (Jun 18). INTC +10.5% Thursday. Watch for further analyst commentary and target price upgrades. Stock at \$133.82.
Apple (AAPL)	Chip partnership implications	Diversification of chip supply away from TSMC. Short-term cost implications and product timing unclear. Analyst notes expected.
SpaceX (SPCX)	IPO aftermarket	Listed June 12 at \$135. Trading ~\$174.90. Starlink 12M subscribers. \$6.4bn Space Force contracts. Next catalyst: Q2 operational update.
General Electric (GE)	Board appointment	Judson Althoff (Microsoft Commercial CEO) joins GE board effective June 24. Board expanded to accommodate appointment.
Boeing (BA)	May delivery report noted	60 commercial aircraft delivered in May 2026 (51x 737 MAX, 6x 787 Dreamliner). Jefferies and Wells Fargo reiterated positive ratings citing demand visibility and production ramp.
Micron (MU), FedEx (FDX)	Earnings (next week)	Key earnings expected next week; will set tone for Q2 reporting season. MU: DRAM/NAND demand signal. FDX: freight volumes and consumer economy health.

12. STOCKS TO WATCH — 19 JUNE 2026

Skew: Aviation, Shipping, Metals & Mining, Aerospace & Defense, Banks, Energy. US names referenced for context given Juneteenth closure — European equivalents in focus today.

Intel (INTC) / Semiconductor sector — Apple-Intel chip deal catalyst. +10.5% Thursday. Expect continued analyst upgrades and sector rotation into chip hardware. European semiconductor proxy: ASML, BE Semiconductor (BESI). **Direction: UP (US closed; European semis may follow)**

BP, Shell, TotalEnergies — Brent at \$79.24 and trending soft on US-Iran supply normalisation. FTSE 100's heavy energy weighting dragged the index -1.2% Thursday. Further Brent softness = continued headwind. **Direction: DOWN / Underperform**

Siemens Energy (ENR GY) — Net profit nearly tripled in recent results; shares surged more than 5%. Beneficiary of European energy infrastructure build-out and grid investment. Watch for continuation or profit-taking today. **Direction: UP / Monitor closely**

Aerospace & Defense: Leonardo, Airbus, Rheinmetall, BAE Systems — Proposed US defense budget increase to \$1.5 trillion for FY2027 underpins the sector. US-Iran peace may slightly reduce conflict-driven demand urgency, but structural European rearmament continues. Rheinmetall and BAE positioned for European defence spend acceleration. **Direction: Neutral to slight UP; Rheinmetall, BAE strong catalysts intact**

Boeing (BA) — US closed but reference — Recovering production ramp. 60 deliveries in May. Jefferies and Wells Fargo positive. Iran deal reopens potential Middle East aircraft orders. Airbus (AIR FP) in Europe as proxy. **Direction: UP (Airbus as European play)**

Commerzbank (CBK GY) — Shares fell 1.8% after recent results failed to impress despite record 2025 operating profit. Monitor for continued selling pressure or recovery on thin Friday volumes. Unicredit stake overhang remains a topic. **Direction: Neutral to slightly DOWN — watch volume**

Gold miners (Fresnillo, Polymetal) — Gold at \$4,168/oz, off from recent highs as Iran deal reduces safe-haven demand and Warsh hawkish rate signal strengthens USD. Gold miners likely to soften in tandem. **Direction: DOWN**

Maersk (MAERSK B DC) / Shipping — Maersk June 2026 Europe market update highlighted trade flow shifts. Iran deal and Hormuz reopening normalises Red Sea-adjacent routes. Positive for shipping cost stability; monitor container rate direction. **Direction: Neutral to slight UP (supply chain normalisation)**

13. MACRO / CORPORATE / POLITICAL HIGHLIGHTS

MACRO

- **Fed Warsh hawkish pivot (June 17-18):** First FOMC meeting under Kevin Warsh. Rates held 3.5%-3.75%. Median dot moved to 3.8% from 3.4%, implying at least one hike this year. 9 of 18 members now lean toward a hike. Policy statement dropped cut-bias language. Markets priced partial selloff Wednesday; recovered Thursday. Dollar strength, EUR/USD under 1.15 at points.
- **ECB divergence risk increasing:** With the Fed shifting hawkish and ECB on hold, the rate differential widens in USD's favour. EUR/USD at 1.1466 reflects this. A further USD leg higher is possible if Warsh signals accelerate. Bund-Treasury spread at ~153 bps.
- **Q1 2026 US earnings record:** S&P 500 EPS growth of 28.4% in Q1 2026, highest since Q4 2021 (FactSet). Provides a strong fundamental cushion even if rates rise modestly.
- **IEA supply glut warning:** Global oil supply projected to grow 8 mb/d vs demand +2 mb/d by 2027. Iran deal accelerates the timeline. OPEC+ credibility under pressure.

CORPORATE

- **Apple-Intel semiconductor deal:** Trump confirmed Apple will source chips from Intel manufactured in the US. Intel +10.5% on Thursday (\$133.82). US government owns ~10% equity in Intel. Deal details (products, volumes, timeline) not yet disclosed.
- **SpaceX post-IPO momentum:** SPCX at \$174.90 after June 12 IPO. Starlink at 12M subscribers (2x YoY). \$6.4bn Space Force contracts. Company remains loss-making at the net level despite revenue growth.
- **Boeing production ramp:** 60 aircraft delivered in May 2026 (51x 737 MAX). Analysts at Jefferies and Wells Fargo positive. Iran deal may unlock Middle East order demand; Airbus is the European beneficiary.
- **Siemens Energy profit surge:** Net profit nearly tripled, stock +5%+. Strong validation of European energy infrastructure investment cycle.

POLITICAL / GEOPOLITICAL

- **US-Iran interim peace deal digitally signed:** After the April 2026 ceasefire, both parties formally signed the interim framework. Strait of Hormuz expected to reopen within 30 days. Oil risk premium partially removed; analysts revised Brent to \$78-\$85 range from \$90-\$95.
- **US manufacturing nationalism:** Trump's push for domestic chip and technology production continues (Apple-Intel deal, Nvidia and Tesla cited earlier). This represents a sustained policy theme affecting global supply chains and TSMC's market position.
- **US defense budget FY2027:** Proposed at \$1.5 trillion. Provides long-term structural support for defense contractors (Northrop Grumman, General Dynamics, Raytheon/RTX, BAE, Rheinmetall).

14. KEY THEMES — TOP 5 BY HORIZON

TODAY'S TOP 5 — DRIVERS OF FRIDAY'S EUROPEAN SESSION

1. US markets closed (Juneteenth) — reduced liquidity

European indices trade without US futures as reference. Expect thinner volumes and potentially amplified moves in either direction. Last EU close saw Euro Stoxx +0.68%, DAX +0.18%, but FTSE dragged by energy.

2. Nikkei at 52-week high (+1.75%) — positive Asian handover

Japan's rally to 71,952 provides a bullish tone for European open. Real estate, banking, and textile sectors led, suggesting broad risk appetite rather than a sector-specific story.

3. Energy sector under pressure — Brent \$79.24 and softening

US-Iran deal supply normalisation and IEA supply glut warning cap oil prices. FTSE 100 has heaviest energy weighting among major European indices and faces continued drag from BP, Shell.

4. FOMC hawkish hangover — dollar strength, EUR/USD 1.1466

Warsh's dot plot shift to 3.8% median adds upward pressure to USD. EUR/USD sub-1.15 potential if European data disappoints. Watch for any ECB speakers today to counter the narrative.

5. Tech / semiconductor momentum (Intel-Apple deal carry)

European semiconductor exposure via ASML, BE Semiconductor (BESI), STMicroelectronics. Chip sector optimism from Apple-Intel pact may provide a positive overlay for European tech names today.

THIS WEEK'S TOP 5 — STRUCTURAL WEEK THEMES (W/C 16 JUNE)

1. Fed Warsh's first FOMC — hawkish pivot dominates the week

The shift in the median dot from 3.4% to 3.8% and removal of cut-bias language was the single biggest event. Defines rates narrative for Q3 2026.

2. US-Iran peace deal digitally signed — risk premium unwound

Ceasefire since April, now formally inked. Strait of Hormuz timeline begins. Oil structural repricing to \$78-\$85 Brent target range.

3. SpaceX (SPCX) IPO aftermarket performance

Listed June 12, SPCX reached \$225 highs and trades ~\$174. Defines investor risk appetite for high-growth / pre-profit technology names. Starlink and Space Force contract wins provide fundamental support.

4. Apple-Intel US chip deal announced

Structural shift in semiconductor supply chain. US manufacturing push confirmed. Intel re-rating higher (\$100bn to \$600bn valuation cited by Trump). TSMC market share under long-term pressure.

5. Thin liquidity Friday — Juneteenth + Dragon Boat Festival

US and HK both closed today, removing two major market anchors. European session trading in a partial vacuum; moves may overstate or understate real sentiment.

THIS MONTH'S TOP 5 — JUNE 2026 STRUCTURAL THEMES

1. Fed Warsh's June FOMC — rate hike risk back on the table

The first meeting under the new Chair reintroduced hike risk. Markets must now price the possibility of a 25 bps hike before year-end. This resets the entire rate-path pricing for bonds, equity valuations, and FX.

2. US-Iran peace deal — Hormuz reopening timeline

30-day Hormuz reopening commitment begins. OPEC+ must respond to Iran's re-entry into export markets. Energy sector repricing underway. Winners: energy importers, airlines, industrials. Losers: E&P, oil majors.

3. SpaceX IPO (June 12) — new era for retail space investment

Largest US IPO of 2026 at \$75bn raise. Creates a new publicly traded vehicle for space economy exposure. Benchmark for investor appetite in high-growth, mission-driven tech.

4. Q1 2026 earnings wrap — strongest EPS growth since Q4 2021

S&P 500 Q1 EPS growth of 28.4% provides a strong fundamental base. The market now looks to Q2 season (July) to confirm whether momentum holds amid higher rates.

5. Late-June macro data: GDP Q1 final + May PCE

These releases will either validate or complicate the Warsh hawkish pivot. A hot PCE or upward GDP revision supports a hike. A miss opens the door to a more measured approach. Key market catalyst for late June.

15. KEY TRENDS TO WATCH

1 DAY — WHAT COULD MOVE TODAY'S EUROPEAN SESSION

- **Euro Stoxx 50 open:** Futures at ~6,337 suggest a modestly positive open. Watch whether the Nikkei 52-week high enthusiasm translates or fades as volumes thin.
- **FTSE 100 vs energy:** Oil at \$79.24/bbl limits FTSE upside. Energy sector will define whether FTSE can reverse Thursday's -1.2%.
- **EUR/USD at 1.1466:** Any European data or ECB comment could amplify the Warsh dollar trade. Below 1.14 is next technical support.
- **No US futures:** Absence of S&P futures as a reference could mean European indices drift or gap on any headline. Be prepared for volatility on thin order books.
- **Semiconductor names (ASML, BESI, ST):** European chip stocks may catch the Intel-Apple deal tailwind from the US Thursday session.

1 WEEK — KEY APPOINTMENTS AND THEMES (W/C 22 JUNE)

- **US market return Monday June 22:** First full US session after Juneteenth. Markets will reset from a three-day period of incomplete pricing. Expect a directional move on open.
- **Micron (MU) earnings:** Semiconductor demand signal for DRAM and NAND. Critical read-across for AI infrastructure investment and chip cycle.
- **FedEx (FDX) earnings:** Freight volumes as a leading indicator for goods economy and consumer activity heading into Q3.
- **Fed speakers:** Post-FOMC speeches from FOMC members will clarify the extent of the hawkish consensus. Any dovish dissent could ease USD pressure.
- **OPEC+ response to Iran deal:** Production cut adjustments in response to Iran's market re-entry will determine whether Brent holds \$78+ or breaks lower.

1 MONTH — MAJOR DEADLINES AND UNDERLYING TRENDS (THROUGH JULY)

- **US Q1 GDP final & May PCE (late June):** Two of the most important macro releases of Q2. Will define whether the Fed is right to signal a 2026 hike. Hot PCE = hike risk confirmed.
- **Q2 2026 earnings season (starts July):** With Q1 at +28.4%, bar is high. Analysts will be watching for margin compression from higher input costs, any tariff impact, and labour cost trends.
- **Strait of Hormuz reopening timeline:** 30-day clock starts with Iran deal signing. Physical re-opening of Iran export volumes will structurally reset global oil supply. OPEC+ credibility at stake.
- **Possible Fed hike timing:** With 9 of 18 officials pencilling in a hike, Q3 or Q4 2026 remains live. July or September FOMC meetings are candidate dates depending on data. Bond market will price this progressively.
- **SpaceX SPCX lock-up and analyst coverage initiation:** Post-IPO dynamics will mature. Institutional analyst coverage initiations expected. First quarterly report as a public company will be closely watched.
