

Morning Briefing

Saturday, 16 May 2026 | Generated ~06:00 BST (London) | Data collected 04:30-06:00 BST

WEEKEND EDITION — European and US markets CLOSED Saturday. Next trading day: Monday 18 May 2026. Futures inactive. This briefing covers Friday 15 May closes and sets up Monday's open.

2. IMPORTANT NEWS

Trump-Xi Beijing summit ends with no major breakthrough on Iran or Taiwan. | Reuters / CNBC / Euronews

Two-day summit produced only modest deliverables (China to buy US oil, 200 Boeing planes, trade councils established). Key flashpoints – Iran war, Strait of Hormuz, Taiwan – unchanged. Markets sold off sharply on disappointment; CSI 300 snapped five-week winning streak. **Risk-off driver for Monday open.**

US 10Y Treasury yield spiked 9bps to 4.55% – highest in over a year – on war-linked inflation data. | TheStreet / Motley Fool

April US PPI and CPI both printed above expectations (biggest CPI increase since 2023; PPI fastest since 2022). Energy shock from Iran conflict driving goods and services prices. CME FedWatch now shows 45% probability of a Fed rate hike this year. **Equity valuation headwind; DCM window constrained.**

Federal Reserve Chair Jerome Powell's term expires 15 May – succession creates policy uncertainty. | IShares / Reuters

No successor formally named. Markets sensitive to any nomination announcement given current inflation debate. New chair could shift rate path materially in either direction. **Key political-market risk this week.**

India raises gold import tariff to 15% from 6% – gold slides ~2.7% on day, ~4% on week. | Vantage Markets / ISABullion / Fortune

India is the world's second-largest gold consumer. The tariff hike, combined with reduced safe-haven demand after partial Trump-Xi de-escalation, drove gold to ~\$4,530/oz on Friday. Gold is now 18.3% below its January 2026 all-time high of \$5,589. **Negative for gold miners and jewellery exporters.**

Empire State Manufacturing jumps to 19.6 in May vs 7.0 consensus – best reading since April 2022. | Charles Schwab / TheStreet

Surprise upside in NY-area factory activity signals resilient US manufacturing despite geopolitical headwinds. Positive data point partially offset by inflation concerns. **Manufacturing and industrial names positive catalyst.**

3. EUROPEAN FUTURES (Pre-open)

Weekend – European futures not actively trading. CME Globex closed Saturday. Data below is Monday open bias, not live quotes.

Future	Last Close Ref.	Monday Open Bias	Note
Euro Stoxx 50 (SX5E)	<i>n/a – weekend</i>	Negative	Carryover from -1.80% Friday close at 5,825
DAX (FDAX)	<i>n/a – weekend</i>	Negative	Closed Friday at 23,951, down 2.1%
CAC 40 (FCE)	<i>n/a – weekend</i>	Negative	Closed Friday at 8,034.64, down 0.59%
FTSE 100 (Z)	<i>n/a – weekend</i>	Slightly negative	Closed Friday down ~0.50%; mining/banking led losses
S&P 500 (ES)	<i>n/a – weekend</i>	Negative	Cash closed 7,408.50 (-1.24%) Friday
Nasdaq 100 (NQ)	<i>n/a – weekend</i>	Negative	Nasdaq cash closed 26,225.14 (-1.54%) Friday

Bias assessment based on Friday close levels, Trump-Xi disappointment, US yield spike, and no positive weekend catalysts identified as of 06:00 BST.

4. YESTERDAY'S CLOSES – European Indices (15 May 2026)

Index	Close	Change	% Change	Note
Euro Stoxx 50	5,825	▼	-1.80%	All sectors in red; tech and industrials led losses
DAX 40	23,951	▼	-2.10%	Steepest European decliner; auto and industrial names hit
CAC 40	8,034.64	▼	-0.59%	Defensives cushioned decline; luxury names resilient
FTSE 100	<i>n/a</i>	▼	~-0.50%	Mining and banking weighed; energy partially offset

Sources: Trading Economics, MarketScreener, 247 Wall St | Collected ~05:30 BST

5. US MARKETS – 15 May 2026 Session

Index	Close	Change (pts)	% Change
S&P 500	7,408.50	-92.7	-1.24%
Dow Jones Industrial	49,526.17	-537.29	-1.07%
Nasdaq Composite	26,225.14	-411.1	-1.54%

Session tone: Risk-off. Equities sold off as the Trump-Xi Beijing summit concluded without meaningful policy breakthroughs. Tech bore the brunt as rising Treasury yields (US 10Y +9bps to 4.55%) compressed growth-stock multiples. Materials and mining stocks also fell sharply on the day (copper -4.2%, gold -2.7%, silver -8%). Energy was the sole positive sector, with oil names gaining as WTI rose 4.2%.

Leading sectors: Energy (WTI surge). **Lagging sectors:** Technology, Materials, Communication Services.

Key takeaway: The market had priced in an optimistic Trump-Xi outcome. The reality – a shallow agreement to buy Boeing planes and US oil, with no progress on Iran, Hormuz, or Taiwan – triggered profit-taking across risk assets. Investors are now watching for escalation or a weekend diplomatic development.

Sources: TheStreet, 247 Wall St, CNBC, Sunday Guardian Live | Collected ~05:00 BST

6. ASIAN MARKETS – Overnight / 15 May 2026

Index	Close	% Change	Note
Nikkei 225	61,409.29	-2.00%	Tech and export names led decline; USD/JPY movement weighed
Hang Seng	n/a	-1.60%	Down in final trading hour; summit outcome prompted profit-taking
Shanghai Composite / CSI 300	n/a	-0.30% (week)	CSI 300 snapped five-week winning streak; lack of trade breakthrough
Kospi (S. Korea)	7,493.18	Volatile	Breached 8,000 intraday (fresh record) then surrendered gains to close at 7,493.18; heavyweight tech sold off sharply

Overall tone: Negative. Asia-Pacific markets fell broadly on Friday as the Trump-Xi summit's underwhelming result removed the expectation premium that had driven the five-week rally in Chinese equities. Japan's Nikkei fell 2% on combined pressure from US yield fears and a strengthening yen. The Kospi's spectacular intraday swing – touching a fresh record above 8,000 before closing at 7,493 – illustrated the sharp reversal in sentiment. Chinese authorities did not announce additional stimulus. Safe-haven flows into yen and bonds were the dominant overnight dynamic.

Sources: CNBC Asia, Bloomberg | Collected ~04:30 BST

7. COMMODITIES – 15 May 2026

Commodity	Price	Change	Unit	Note
Brent Crude	\$109.26	+3.35%	/bbl	Up ~84% YTD; IEA warns global undersupply through Oct if Hormuz stays disrupted
WTI Crude	\$105.42	+4.20%	/bbl	US Iran sanctions on 12 entities re-imposed; no ceasefire progress; energy sector gains
Gold (XAU/USD)	\$4,530	-2.70%	/oz	India raised import tariff to 15% from 6%; safe-haven demand eased after summit
Natural Gas (Henry Hub)	\$3.26	n/a	/MMBtu	Remains below \$3.50 near-term; Dec 2026 contract above \$4
Copper (LME)	n/a	-4.20%	/t	Metals broadly sold off on dollar strength and risk-off; specific LME level not sourced

Oil remains the dominant commodity story. Brent is up ~84% year-to-date, driven entirely by the Iran conflict and Strait of Hormuz disruption. The IEA reported crude flows through Hormuz fell by ~4 million barrels per day in March-April. With Iran-US negotiations stalled after Trump rejected Tehran's May 10 proposal as "totally unacceptable," the market sees no near-term resolution. Gold's sharp weekly decline (-4%) is a regime shift: the India tariff hike removes a structural demand pillar. If Hormuz disruption persists, natural gas prices are expected to rise significantly into winter.

8. RATES & FX – 15 May 2026

RATES

Instrument	Level	Change
US 10Y Treasury	4.55%	+9bps
German 10Y Bund	3.07%	n/a (chg)
ECB Deposit Rate	2.00%	Hold (Apr 30)
Fed Funds (target)	~3.50–3.75%	On hold

FX

Pair	Level	Change
EUR/USD	1.1624	-0.37%
GBP/USD	1.3321	-0.62%
DXY (Dollar Index)	~99.3	+~1% wk

The US 10Y yield's 9bps spike to 4.55% – the highest in over a year – is the key macro development of the week. It is driven by two forces: war-related energy shock feeding through to CPI and PPI, and rising market bets on a Fed rate hike (now 45% probability). The dollar index climbed to ~99.3, its strongest level since early April, pressuring EUR/USD below 1.17 and 1.16. EUR/USD has now fallen five consecutive sessions from its May high of 1.1789. The ECB's Kazaks signalled the ECB may need to hike if energy inflation feeds into expectations. The German Bund yield at 3.07% is near its highest since 2011, reflecting eurozone inflation re-anchoring risk. GBP was hit harder than EUR on the day (-0.62%) though BoE's Breeden downplayed inflation-shock risk.

9. DCM – PRIMARY BOND MARKET

YESTERDAY'S ISSUANCES (15 MAY 2026)

No confirmed EUR or USD corporate / SSA deals sourced for Friday 15 May 2026.

Context: Friday sessions are typically the lightest day of the week for primary issuance. The combination of a 9bps US Treasury yield spike, risk-off equity markets, and the Trump-Xi summit uncertainty made Friday an unsuitable window. It is highly probable no IG or HY transactions priced in Europe on this date.

PIPELINE / EXPECTED THIS WEEK (18-22 MAY)

The primary market had been active in EUR IG ahead of the risk-off Friday. With Monday's open carrying negative sentiment, issuers with flexible mandates are likely to assess the yield environment before launching. Expect a quiet Monday; midweek window (Tuesday-Wednesday) dependent on yield stabilisation.

Specific mandated transactions not sourced – verify IFR / GlobalCapital on Monday morning.

KEY SPREADS

Index	Level	Move	Direction
iTraxx Main (5Y)	<i>n/a</i>	<i>n/a</i>	Likely widening – risk-off Friday
iTraxx Crossover (5Y)	<i>n/a</i>	<i>n/a</i>	Likely widening – HY under pressure
CDX IG (5Y)	<i>n/a</i>	<i>n/a</i>	Likely widening – US rate vol
Avg Euro IG Corp Spread	<i>n/a</i>	<i>n/a</i>	Directionally wider on week

Specific spread levels not sourced – directional assessment based on equity and rate moves.

COMMENTARY

The primary market window is effectively shut going into Monday. A 9bps yield spike in US Treasuries, combined with a -1.8% to -2.1% move in European equities, signals investor risk appetite has deteriorated sharply. Issuers in energy, industrials, and transport may attempt midweek windows if yields stabilise, but concessions will be wider than last week's tight levels. Financials and SSA issuers with rated mandates will likely be first movers once sentiment stabilises. High yield is expected to remain shut. The Bund at 3.07% – a multi-year high – compresses the relative value case for new EUR IG issuance and will require generous new-issue premiums.

11. CORPORATE EVENTS & EARNINGS – Week of 18-22 May 2026

	Date	Company	Event	Significance
	Mon 18 May	Baidu (BIDU)	Earnings (pre-market)	China AI bellwether; US-China tech relationship post-summit
	Tue 19 May	Home Depot (HD)	Earnings	US consumer health and construction activity signal
	Tue 19 May	Toll Brothers (TOL)	Earnings	US homebuilder; housing market conditions under high rates
	Tue 19 May	Cava Group (CAVA)	Earnings	US consumer discretionary health check
	Wed 20 May	Nvidia (NVDA)	Earnings – KEY	Most watched report of the week; AI-driven demand vs. macro headwind for tech sector direction
	Wed 20 May	Analog Devices (ADI)	Earnings	Semiconductor and industrial electronics demand
	Wed 20 May	TJX Companies (TJX)	Earnings	Discount retail; consumer trading-down trends
	Wed 20 May	Lowe's (LOW) / Intuit (INTU)	Earnings	Home improvement and software; two consumer/SME sectors
	Thu 21 May	Walmart (WMT)	Earnings	Consumer spending and supply-chain inflation read
	Thu 21 May	Deere & Co (DE)	Earnings	Agricultural equipment; farmland economics and US-China agri deal
	Thu 21 May	Ralph Lauren (RL) / Ross Stores (ROST)	Earnings	Luxury and discount retail; broad consumer trend read
	Week	Boeing (BA)	Trump-Xi deal follow-up	China to purchase 200 Boeing planes; details and timeline market-moving for BA stock
	Fri 15 May	Cerebras Systems	Day-2 post-IPO trading	Nasdaq debut gained 68%; subsequent -2% premarket slide on day 2

Sources: Kiplinger, Motley Fool, Yahoo Finance, CNBC | European corporate calendar – verify MarketScreener Monday

12. STOCKS TO WATCH – Monday 18 May 2026

Company	Ticker	Sector	Catalyst	Probable Direction
Boeing	BA	Aerospace / Defense	China agreed to buy 200 planes as part of Trump-Xi deal; only concrete large-ticket outcome of summit	Positive – potential multi-billion order flow
Energy Majors (BP, Shell, TotalEnergies)	BP.L / SHEL.L / TTE.PA	Energy	Brent +3.35% to \$109.26; oil up 84% YTD; no Iran resolution in sight; energy is sole positive sector	Positive – earnings and cash-flow upgrades likely
Cerebras Systems	CBRS	AI / Semiconductors	IPO debuted +68% on Nasdaq; day-2 -2% premarket; subject to post-IPO volatility and lock-up dynamics	Volatile – watch for continued profit-taking
Gold Miners (Barrick, Fresnillo)	GOLD / FRES.L	Metals & Mining	Gold -2.7% Friday, -4% on week; India tariff hike removes demand pillar; \$4,500 support being tested	Negative – earnings downgrades if gold holds below \$4,600
Copper Miners (Antofagasta, Glencore)	ANTO.L / GLEN.L	Metals & Mining	Copper -4.2% Friday on dollar strength and risk-off; mining stocks fell broadly in London and NY	Negative – further pressure if risk-off continues Monday
ASML	ASML.AS	Semiconductors / Technology	Raised 2026 revenue outlook on AI chipmaking demand; outperformed peers; China export clarity post-summit?	Positive bias – raised guidance; watch Monday re-rating
S. Korean Tech (Samsung, SK Hynix)	005930.KS / 000660.KS	Technology / Semiconductors	Kospi breached 8,000 then plunged to close at 7,493; heavyweight tech stocks drove the reversal	Negative – dramatic intraday reversal; risk of follow-through selling
Steel Dynamics (STLD)	STLD	Metals & Mining	Analyst forecasts 20.7% annual earnings growth; Empire State Manufacturing beat signals industrial demand	Positive – US manufacturing strength; watch Monday reaction

Company	Ticker	Sector	Catalyst	Probable Direction
Indian Jewellers / Gold Importers (Tanishq / Titan)	TITAN.NS	Consumer / Retail	India gold import tariff raised to 15%; major demand headwind for gold jewellery market	Negative – cost of gold inputs rises sharply for Indian retailers
US Regional Banks	KRE ETF	Financials	US 10Y at 4.55% and widening credit concerns; Fed hike pricing at 45% creates NIM benefit but also credit risk	Mixed – NIM improvement vs. credit stress; monitor closely

Sources: CNBC, TheStreet, 247 Wall St, Yahoo Finance, Schwab | Sector skew: energy, mining, aerospace, tech

13. MACRO / CORPORATE / POLITICAL HIGHLIGHTS

MACRO

US inflation re-accelerating on energy shock. April PPI rose at fastest pace since 2022; CPI recorded biggest increase since 2023. Both driven by oil pass-through from Iran war. Fed hike probability now 45% for 2026 (CME FedWatch). This is the dominant macro risk for equity and credit markets.

ECB holds rates at 2.15% (deposit: 2.00%) but faces competing pressures. ECB professional forecasters cut 2026 eurozone GDP growth to 1.0% while raising inflation to 2.7%. Kazaks flagged potential rate hike if energy inflation feeds into expectations. Markets pricing 3 hikes in 2026 but ~85% of economists expect no change through year-end.

Empire State Manufacturing jumps to 19.6 in May vs 7.0 estimate – best in 4+ years. Suggests US factory activity robust despite geopolitical uncertainty. Partially contradicts stagflation narrative. Industrial and materials companies worth watching for re-rating.

Fed Chair succession highly uncertain. Powell's term expired May 15. No successor announced. The nomination is politically sensitive given ongoing inflation debate and ongoing war-related pressures.

CORPORATE

Trump-Xi deal: China to buy 200 Boeing planes and US crude oil. Trade and investment councils to be established. Limited in scope but positive for Boeing and US energy producers. No tech export clarity or agricultural concessions obtained.

Cerebras Systems Nasdaq IPO: +68% on debut then -2% in next-day premarket. AI chip company raised expectations; volatile post-IPO dynamics typical of high-profile tech listings in current environment.

ASML raised 2026 revenue outlook on strong AI chipmaking tool demand. Aixtron also raised guidance. Semiconductor equipment names diverging from broader tech sell-off. AI capex cycle remains structurally intact despite macro headwinds.

India gold import tariff raised to 15% from 6%. Policy decision with immediate global gold market impact. Gold now 18.3% below January 2026 all-time high of \$5,589/oz.

POLITICAL / GEOPOLITICAL

Iran-US peace negotiations stalled. Trump rejected Tehran's May 10 counterproposal as "totally unacceptable" and "garbage." April ceasefire is on "life support." Iran demanded full sanctions relief, asset releases, Hormuz sovereignty recognition, and deferred nuclear curbs. Oil remains at \$109 Brent with no resolution in sight.

US re-imposed sanctions on 12 entities involved in Iranian oil sales to China, plus three Iranian currency exchanges and a Chinese oil terminal. The sanctions escalation occurred even as Trump was in Beijing – a dual-track pressure strategy. Adds tension to US-China energy cooperation discussions.

Xi warned Trump that Taiwan could push the two countries into "conflict" if mishandled, during the Beijing summit. No progress on Taiwan. Market interpretation: geopolitical risk premium on Taiwan Strait remains elevated. Semiconductor supply chain vulnerability unaddressed.

IEA warns global oil market could remain materially undersupplied through October even if the Hormuz conflict resolves next month. Crude flows through the Strait fell ~4 million barrels per day in March-April. Energy market structurally tight for the next 5+ months.

Sources: CNBC, Bloomberg, Reuters, Euronews, NBC News, Heritage Foundation, IEA | Collected ~05:30 BST

14. KEY THEMES – TOP 5 BY HORIZON

TODAY'S TOP 5 (MON 18 MAY)

1. Trump-Xi fallout. Markets reopen after disappointed summit; profit-taking likely to continue in tech and China-exposed names. Watch for any weekend diplomatic statement.

2. US yield pressure. 10Y at 4.55%; if yields hold or push higher Monday, equity multiple compression continues and DCM window stays shut.

3. Fed Chair nomination. Any name emerging over the weekend would be a major market catalyst in either direction depending on candidate's known rate policy lean.

4. Oil and Hormuz. Any escalation or de-escalation over the weekend moves Brent sharply. Stalled negotiations mean upside risk to \$115+.

THIS WEEK'S TOP 5 (18-22 MAY)

1. Nvidia earnings (Wed 20 May). The single most important corporate event of the week. Strong AI data-centre demand vs. macro risk-off; result sets tone for entire tech and semiconductor sector.

2. FOMC Minutes (Wed 20 May). April meeting minutes will reveal internal debate on inflation vs. growth. Any hawkish lean confirms 4.55% yield and potential hike.

3. Eurozone and UK CPI (Tue-Wed). Energy pass-through from oil shock is the key variable. Hot print = ECB hike debate intensifies = Bund spreads widen further.

4. Boeing order materialisation. Will China follow through on 200-plane commitment? Formal announcement or term-sheet would be a major BA catalyst and US-China tension gauge.

THIS MONTH'S TOP 5 (MAY 2026)

1. Iran-Hormuz resolution or escalation. IEA sees undersupply through October minimum. Brent at \$110+ is a structural inflation driver that makes any central bank normalisation plan obsolete.

2. ECB June meeting (rate hike or hold?). The most consequential ECB decision since 2023. Energy inflation + ECB forecasters raising outlooks suggest June hike risk is real; markets pricing it but economists sceptical.

3. Fed Chair nomination and rate path reset. New Fed Chair = new communication framework. Markets cannot price the rate cycle with confidence until nomination is confirmed.

5. Gold retest of \$4,500 support. If Indian demand destruction is larger than priced, \$4,400 becomes the next technical level. Mining stocks at risk.

5. ECB speakers (Mon-Fri). Post-April hold, any hawkish signal from Kazaks, Lagarde, or other GC members on June meeting changes EUR rate pricing materially.

4. US-China trade deal implementation. Boeing and oil commitments need formalisation. Any reversal or delay = risk-off for industrial, energy and aerospace names.

5. Gold new price range establishment. January ATH \$5,589 now 18% above spot. India tariff + summit cooling = structural demand shift. Whether \$4,500 holds defines the commodity sector's second-half setup.

15. KEY TRENDS TO WATCH

1 DAY – MONDAY 18 MAY 2026

Risk sentiment reopening: European indices carry a negative bias from Friday's -1.8% to -2.1% closes. A gap lower at open is the base case unless a positive weekend development emerges (Iran ceasefire rumour, Fed Chair name, China stimulus).

US Treasury yield trajectory: Will 10Y hold 4.55% or retrace toward 4.45%? Stability or further rise = additional pressure on growth stocks and IG credit spreads. A meaningful retrace = potential relief rally.

Oil vs. equities divergence: If Brent pushes toward \$112-115 on any Iran escalation signal, the market faces stagflation pricing – equities down, energy up, defensives bid.

Gold \$4,500 support test: Key technical and psychological level. Break lower = further mining stock selling; hold = potential mean-reversion trade.

1 WEEK — 18-22 MAY 2026

Nvidia earnings (Wed): Direction-setting for global tech and AI capex theme. A beat with strong forward guidance could reverse the week's risk-off mood. A miss or cautious outlook = second leg of tech sell-off.

Rate vol regime: FOMC minutes and CPI prints determine whether 4.55% US 10Y is a peak or a springboard to 4.75%. The former reopens IG primary; the latter keeps it shut.

ECB June hike debate: Every ECB speaker this week is a data point. Markets currently pricing 3 hikes; move toward confirming June = EUR/USD likely reverses off 1.1624 and reprices higher.

Consumer data (HD, WMT, CAVA): US household spending under energy price pressure. Strong prints = stagflation soft landing scenario; weak = recession risk re-enters narrative.

1 MONTH — THROUGH JUNE 2026

Iran-Hormuz outcome: The most consequential single variable in global markets. Resolution (however temporary) = Brent drops \$20-25, inflation scare reverses, rate hike odds collapse, equity rally. Escalation = Brent \$125+, global recession pricing.

ECB June meeting rate decision: If ECB hikes at June meeting (first hike in this cycle) it signals a new regime for eurozone rate pricing. EUR/USD would rally; European bank stocks positive; peripheral bond spreads under pressure.

Fed Chair confirmation: Markets need clarity on US rate trajectory. A hawkish appointee would confirm the 45% hike probability currently priced; a dovish one would rally bonds and pressure USD.

China stimulus watch: Trump-Xi summit delivered limited US market access gains. Chinese authorities may respond with additional domestic stimulus to shore up the CSI 300 after the five-week winning streak ended. Stimulus = positive for global metals demand (copper reversal).

Gold's new floor: India tariff decision and reduced safe-haven premium may set a new trading range for gold at \$4,300-\$4,700 vs the \$4,800-\$5,200 range of Q1. Watch for central bank buying (China, Russia) to establish a floor.
