

MORNING BRIEFING

Monday, 1 June 2026 | Generated ~06:30 BST (London) | Data collected: 05:30–06:30 BST | Last European close: Friday 29 May 2026

2. IMPORTANT NEWS

US and Iran near ceasefire extension to reopen Strait of Hormuz

Source: CNBC / Yahoo Finance | ~06:00 BST

Reports suggest the US and Iran have agreed a memorandum paving the way to restore tanker flows through the Strait of Hormuz. Trump has not yet formally approved; Iranian state media has not confirmed finality. This is the dominant macro theme driving equities higher and oil lower in May.

Dell Technologies stock surges 32.76% — best single day on record — after AI server revenue up 757% YoY

Source: CNBC | ~06:00 BST

Dell Q1 revenue of \$43.84bn smashed consensus of \$35.45bn; AI server revenue alone hit \$16.1bn. Stock closed at +32.76% on Friday. Year-to-date gain now ~234%. Broad AI capex narrative now setting up HPE earnings today.

US equities close May at record highs; Nasdaq gains 8% for the month

Source: CNBC / Yahoo Finance | ~06:00 BST

S&P 500 hit 7,580.06, Dow 51,032.46, Nasdaq 26,972.62 on Friday. All major averages scored new records to close out May. Market is entering June having rallied sharply off March lows — potential for consolidation noted.

ECB held rates at April 30 meeting; June decision meeting is live for a 25bp hike

Source: ECB / CNBC | ~06:00 BST

ECB kept deposit rate at 2.00%, main refinancing rate at 2.15%. Eurozone inflation jumped to 3.0% in April, driven by energy. Economists flag June as the meeting where a 25bp hike to 2.25% becomes possible given persistent above-target inflation.

US Supreme Court struck down legal basis for broad 2025 tariffs; new measures enacted under alternative authority

Source: Rabobank / Kitces | ~06:00 BST

February 2026 ruling removed the original legal foundation for many of the 2025 tariff measures. The administration has since pursued alternative legal channels. Combined with Iran tensions, this is reshaping global trade flows and supply chains.

3. EUROPEAN FUTURES — PRE-OPEN

Note: Specific pre-open June 1 futures levels were not retrievable from real-time sources at time of generation. Direction context based on Friday US record closes and mixed-to-positive Asian overnight session. Verify levels on exchange platforms before market open.

CONTRACT	LEVEL	EXPECTED MOVE	CONTEXT
Euro Stoxx 50 (FESX)	n/a	Positive bias	US record close + Iran deal hopes
DAX (FDAX)	n/a	Positive bias	Fri +0.87%; inflation below expectations
CAC 40 (FCE)	n/a	Positive bias	Fri +0.83%; Iran risk easing
FTSE 100 (Z)	n/a	Neutral/cautious	Weekly -0.54%; oil decline hurts energy heavy index
S&P 500 (ES)	n/a	Positive bias	Friday close at record 7,580; Asia mixed-positive
Nasdaq 100 (NQ)	n/a	Positive bias	AI capex narrative strong; HPE earnings tonight

4. YESTERDAY'S CLOSURES — EUROPEAN INDICES

Last trading session: Friday 29 May 2026. Markets were closed Saturday 30 and Sunday 31 May.

INDEX	CLOSE	CHANGE	% CHANGE
Euro STOXX 50	6,065	+18	+0.30%
STOXX Europe 600	626.5	+1.3	+0.20%
DAX	n/a	n/a	+0.87%
CAC 40	n/a	n/a	+0.83%
FTSE MIB	n/a	n/a	+1.06%
FTSE 100	n/a	n/a	-0.54% (weekly)

Sources: CNBC, TradingEconomics. Exact close levels for DAX/CAC/FTSE not retrieved — verify on exchange.

5. US MARKETS — FRIDAY 29 MAY 2026 SESSION

INDEX	CLOSE	CHANGE (PTS)	% CHANGE
S&P 500	7,580.06	+16.68	+0.22%
Dow Jones Industrial Average	51,032.46	+363.49	+0.72%
Nasdaq Composite	26,972.62	+54.0	+0.20%

Session tone: Bullish. All three major averages hit fresh record highs to close out May. Nasdaq gained 8% for the month — strongest monthly performance since late 2024. Market is pricing in a positive resolution to the Iran conflict with potential Strait of Hormuz reopening.

Leading sectors: Technology (Dell +32.76% post-earnings, AI server narrative). Energy names muted on oil price decline. Defensive rotation minimal.

Key takeaway: Record closes heading into June. Dell's AI server beat (+88% revenue YoY) has reset AI capex expectations upward. Market note: June is historically the weakest month for stocks in midterm election years — scope for consolidation even as momentum holds.

Source: CNBC, Yahoo Finance

6. ASIAN MARKETS — OVERNIGHT SESSION (1 JUNE 2026)

INDEX	LEVEL	% CHANGE	NOTE
Nikkei 225	n/a	+0.17%	Modest gains; Topix -0.3% divergence
Topix	n/a	-0.30%	Domestic names lagged
Kospi (South Korea)	n/a	+1.31%	Record high; Samsung +3% all-time high
Kosdaq	n/a	-1.58%	Small-cap underperformance
Hang Seng	n/a	n/a	Data not retrieved
Shanghai Composite	n/a	n/a	Data not retrieved

Tone: Mixed. South Korea outperformed sharply with Samsung Electronics hitting a record high (+3%), benefiting from the same AI hardware demand narrative as Dell. Japan split between Nikkei and Topix. Hong Kong and mainland China data unavailable at time of generation — verify before open.

Drivers: Ongoing uncertainty around US-Iran deal timeline. AI server demand tailwind for tech-heavy Asian exporters. Samsung record high is notable. South Korea stocks hit a fresh record high, bucking mixed regional performance.

Source: CNBC

7. COMMODITIES

COMMODITY	PRICE	CHANGE	COMMENT
Brent Crude (USD/bbl)	\$93.26	+2.35%	Note: conflicting source data vs WTI — verify
WTI Crude (USD/bbl)	~\$87.2	~-2.0%	May MTD: -16.2%; Iran ceasefire hopes driving decline
Gold (USD/oz)	\$4,580	-0.8% (MTD)	Near-term dip on Iran deal optimism; support remains strong
Natural Gas	n/a	n/a	Data not retrieved
Copper (USD/t)	~\$12,100	n/a	S&P Global 2026 avg forecast; concentrate shortage + limited mine supply

Notable: WTI on track for a 16.2% decline in May — its worst monthly performance in a geopolitical easing cycle since 2023. The Brent-WTI spread appears wide at ~\$6, possibly reflecting continued Hormuz risk premium on North Sea/Brent benchmark. Verify Brent figure against Bloomberg or ICE at open.

Sources: TradingEconomics, EIA, S&P Global Market Intelligence, OilPrice.com

8. RATES & FX

INSTRUMENT	LEVEL	CHANGE	NOTE
US 10Y Treasury Yield	4.44%	Declining	Touched 2-week low; Iran deal hopes ease inflation anxiety
German 10Y Bund Yield	n/a	n/a	ECB at 2.00% deposit rate; verify on Bloomberg/Refinitiv
EUR/USD	n/a	n/a	DXY ~99 (late May); EUR/USD not sourced with confidence
GBP/USD	~1.344	n/a	Data from 28 May; approximately current
DXY (US Dollar Index)	~99	~-1.0% (MTD)	Near 2-week lows at end of May; dollar softening on Iran deal hopes

Context: US 10Y at 4.44% eased on optimism that a US-Iran deal would ease commodity price pressures and reduce inflation expectations. Dollar weakened (DXY ~99) as safe-haven demand faded. Bund yield and EUR/USD were not reliably sourced — verify before use.

Sources: CNBC, MarketPulse/OANDA, Federal Reserve H.10 release

9. DCM — PRIMARY BOND MARKET

YESTERDAY'S ISSUANCES

Specific bond deals priced on Friday 29 May 2026 were not retrievable from open web sources at time of generation. IFR and GlobalCapital paywalled content was not accessible. Verify against Bloomberg LEAG screen or IFR deal database.

Market context: Record equity highs and narrowing credit spreads through May provide supportive backdrop. EUR IG primary market has been active in H1 2026. Friday pre-holiday windows are typically quieter for new issuance.

PIPELINE / EXPECTED TODAY

No specific mandated deals were confirmed from public sources for Monday 1 June. First day of the month typically sees issuers looking to access fresh demand. Monitor IFR/GlobalCapital for mandate announcements during the morning.

Sector watch: Financial institutions group (FIG), SSA, and investment-grade industrials are the most active EUR issuance segments. MREL issuance continues as a key non-sovereign driver (CEE banks EUR ~20bn in 2026 YTD per ION Analytics).

KEY SPREADS

INDEX	LEVEL (BPS)	CHANGE	DIRECTION
iTraxx Main (5Y)	n/a	n/a	Not sourced
iTraxx Crossover (5Y)	n/a	n/a	Not sourced
CDX IG (5Y)	n/a	n/a	Not sourced
Avg EUR Corp IG Spread	n/a	n/a	Not sourced

COMMENTARY

Primary market tone through May was constructive, benefiting from the broad risk-on mood tied to Iran deal optimism and falling oil prices. Record equity closes going into June are a positive signal for IG credit issuance windows. The ECB's hold-with-hawkish-lean posture keeps EUR rates from falling materially, but investor appetite for spread product remains intact at current all-in yields. June is historically an active month for euro corporate supply ahead of the summer slowdown. Watch for any shift in spread direction if the Iran deal fails to materialize — energy sector issuers would be particularly exposed. Financials and SSA remain the volume drivers.

Sources: GlobalCapital, IFR, ION Analytics, ECB, ICMA (deal-level data not available via open web — use Bloomberg LEAG/CORP for live runs)

10. ECONOMIC CALENDAR — MONDAY 1 JUNE 2026

08:00 BST	Germany Retail Sales (April)	Consensus: n/a	MEDIUM
08:00 BST	Switzerland GDP (Q1 2026)	Consensus: n/a	MEDIUM
TBC	China Manufacturing PMI (May) — Caixin/S&P Global	Consensus: n/a	MEDIUM
14:45 BST	US S&P Global Manufacturing PMI Final (May)	Consensus: n/a	MEDIUM
15:00 BST	US ISM Manufacturing PMI (May)	Prev: 52.7 (Apr)	HIGH
15:00 BST	US Construction Spending (April)	Consensus: n/a	MEDIUM

Key release: ISM Manufacturing PMI (May) at 15:00 BST is the high-importance data point today. April read was 52.7 — manufacturing in expansion for 18th consecutive month. A surprise miss could dampen the record-high mood; a beat extends the constructive narrative into June.

Week ahead: Eurozone CPI (Tue 2 June), ADP employment + ISM Services PMI (Wed 3 June), US Nonfarm Payrolls (Fri 5 June — highest importance release of the week).

Sources: LiteFinance Economic Calendar, Babypips, ISM, Guggenheim Investments

11. CORPORATE EVENTS & EARNINGS — 1 JUNE 2026

Hewlett Packard Enterprise (HPE) — Q2 FY2026 Earnings After Close

US. Report after market close; earnings call 5:00 PM EDT.

Revenue est: \$9.82bn (+28.7% YoY). EPS est (non-GAAP): \$0.54 (+42% YoY). HPE raised FY26 EPS outlook to \$2.30-\$2.50 in Q1. Market will focus on AI/server commentary in the wake of Dell's blowout results. A strong beat would cement the AI capex super-cycle narrative.

Dell Technologies (DELL) — Post-Earnings Day

US. Digesting Friday's +32.76% surge.

Q1: Revenue \$43.84bn vs est \$35.45bn. AI server revenue \$16.1bn (+757% YoY). Multiple bank upgrades (JPMorgan, BofA, Wells Fargo) with raised price targets. Stock up ~234% YTD. Watch for continuation or partial mean reversion at open.

AGMs — June 2026 (not today)

Europe. No major AGMs confirmed for 1 June specifically.

Aegon AGM: 10 June 2026. Ermenegildo Zegna AGM: 26 June 2026. Lithium Argentina AGM (Zug + Sun Valley): 19 June 2026.

Sources: Alphastreet, TipRanks, MarketBeat, SEC filings, MarketScreener

12. STOCKS TO WATCH — 1 JUNE 2026

DELL	Post-earnings digestion after record +32.76% session. AI server revenue beat was extreme. Watch for continuation on fresh broker upgrades vs profit-taking. Up 234% YTD.	WATCH UP/VOLATILE
HPE	Q2 earnings after close today. EPS est \$0.54, rev est \$9.82bn. Dell results raise the bar — strong AI server commentary could catalyze a large move after close. Options pricing will be elevated pre-report.	WATCH UP ON BEAT
NVDA	Primary beneficiary of the AI server capex cycle. Dell's Nvidia GPU demand confirmation (+757% AI server revenue) is a direct catalyst. Watch for sympathy move with broader AI trade.	WATCH UP
005930.KS (Samsung)	Hit all-time high overnight (+3%) in Seoul session. AI chip demand driving memory and semiconductor exports. Kospi at record high. Positive for Asian tech sentiment into European open.	WATCH UP
NOC / LMT / RTX	Defense names in focus as Iran deal uncertainty persists. Trump has not yet approved the ceasefire extension — any deal breakdown would sharply lift defense stocks. Super-cycle of global military spending is structural. Watch Northrop (B-21, Sentinel ICBM), Lockheed (F-35), RTX (missiles, sensors).	WATCH — DEAL-SENSITIVE
GE Aerospace	Commercial aviation recovery + Hormuz reopening scenario supports jet engine demand outlook. Installed base of 50,000 commercial aircraft engines. Iran deal could unlock Middle East aviation routes.	WATCH UP
BA (Boeing)	737 MAX and 787 build rate progress. UBS expects accelerating cash flow. Iran deal normalisation positive for commercial order book. Watch for any deal-related developments.	WATCH UP
Energy (XOM, CVX, BP, SHEL)	WTI down ~16% in May on Iran deal hopes. FTSE 100 underperformed partly due to energy-heavy composition. Any breakdown of Iran negotiations would be a sharp positive catalyst for oil and energy stocks.	WATCH — IRAN-SENSITIVE
Shipping (MAERSK, HLAG)	Strait of Hormuz reopening would significantly reduce rerouting costs and improve tanker/container economics. Watch Maersk and Hapag-Lloyd for reaction to Iran deal headlines.	WATCH UP ON DEAL
Copper miners (GLEN, AAL, FCX)	Copper at ~\$12,100/t on concentrate shortage + limited new supply. Glencore, Anglo American, Freeport-McMoRan all leveraged to structural copper deficit. Watch for any macro demand signals from China PMI today.	WATCH UP

13. MACRO / CORPORATE / POLITICAL HIGHLIGHTS

MACRO

ECB: hold with hawkish lean. Deposit rate 2.00%, main refinancing 2.15% after April 30 decision. Eurozone CPI jumped to 3.0% in April (energy-driven). ECB forecasts 2.6% inflation for 2026, GDP growth 0.9%. Economists see June meeting as live for a 25bp hike given persistent above-target inflation. Growth forecast downgraded vs prior projections, citing commodity market disruption.

US manufacturing expansion intact. ISM Manufacturing PMI at 52.7% in April (18th consecutive month of expansion). New Orders Index 54.1%. May reading due today at 15:00 BST. Consensus not yet set — April reading is baseline reference.

Dollar softening. DXY near 99 and tracking toward 2-week lows. US 10Y at 4.44% — lowest in 2+ weeks. Iran deal optimism and falling oil reducing US inflation expectations marginally. Dollar weakness supportive of emerging market flows.

US NFP on Friday. Nonfarm Payrolls for May (Friday 5 June) is the dominant macro event this week. Labour market data will be critical for Fed rate path assessment. No Fed speakers scheduled for Monday — quiet for Fed chatter.

CORPORATE

Dell AI server reset. Dell Q1 revenue +88% YoY to \$43.84bn; AI server revenue +757% to \$16.1bn. This is the largest AI demand confirmation yet from a publicly-traded hardware vendor. Sets a very high bar for HPE today and resets upward AI capex assumptions across the sector.

Tech sector monthly performance. Nasdaq +8% in May. S&P 500 and Dow at record highs. Dell shares up 234% YTD. Market is pricing in a sustained AI investment super-cycle. Any macro or geopolitical shock could trigger sharp unwinding given elevated valuations.

Copper structural deficit. S&P Global projects 2026 copper average above \$12,100/t. Mine supply constraint combined with AI/data-centre copper demand. Relevant for Glencore, Anglo American, and infrastructure plays.

POLITICAL / GEOPOLITICAL

Iran ceasefire — not finalised. US and Iran reportedly agreed a memorandum toward restoring Hormuz tanker flows, but Trump has not signed off. Iranian state media denies finalisation. This is the single most important geopolitical variable for oil, energy equities, defense stocks, and global shipping. Expect headline-driven volatility.

US tariff reset. Supreme Court struck down the legal basis for many 2025 tariffs in February 2026. New measures enacted under alternative statutory authority. Combined with Iran conflict, this continues to reshape global trade flows and supply chains. Watch for any new trade-related executive action.

Energy crisis context. The Iran conflict has triggered what analysts describe as the most significant energy crisis since the 1970s. Oil prices rose sharply in Q1 2026 before the ceasefire narrative began defusing the premium in May. Any deal collapse would reverse May's 16% WTI decline almost entirely.

14. KEY THEMES — TOP 5 BY HORIZON

TODAY'S TOP 5

1. ISM Manufacturing PMI (May) — 15:00 BST

The first major US data point of June. Previous read was 52.7 (expansion). A surprise miss could prompt a risk-off correction from record highs; a beat extends the constructive tone. Market consensus not yet published — watch for revisions to the S&P Global flash PMI as guide.

2. Iran ceasefire / Hormuz deal progress

Trump is yet to formally approve. Any headline — confirmation or breakdown — will move oil by 3-5%+ and cascade into energy equities, defense names, and risk sentiment broadly. The dominant binary risk event of the session.

3. HPE earnings after close

Dell set an extraordinary bar with 757% AI server growth. HPE's Q2 results (EPS est \$0.54, rev \$9.82bn) will either confirm AI hardware demand is broadly robust or flag concentration risk. Options are pricing a significant move — likely 6-10% post-close.

4. AI capex spillover from Dell

Dell's record session (+32.76%) will lift the broader AI ecosystem — Nvidia, AMD, SuperMicro, and hyperscaler plays. Watch for desk flows into the AI theme in European tech and semiconductor names at the open.

5. ECB June meeting expectations building

Eurozone CPI releases Tuesday (2 June). Market is pricing in a potential 25bp ECB hike at June meeting. Any CPI surprise tomorrow shapes EUR rates and EUR/USD through the rest of the week.

THIS WEEK'S TOP 5

1. US Nonfarm Payrolls — Friday 5 June

The highest-impact macro event of the week. Strong payrolls would reinforce the no-cut Fed narrative; a miss would reignite rate-cut hopes and likely push equities higher (bad-news-is-good-news dynamic). Critical for USD, 10Y yields, and risk assets.

2. Eurozone CPI Flash (May) — Tuesday 2 June

Prior read was 3.0% in April. If energy effects from Iran crisis persist, a second high print locks in the ECB hike case. A softer read would ease EUR rates expectations. EUR/USD and Bund yields will react significantly.

3. ADP Private Employment + ISM Services PMI — Wednesday 3 June

ADP as a payrolls preview; ISM Services (the larger sector of the US economy) as a health check. Combined release day will anchor NFP expectations and set up Fed pricing for the week.

4. ECB rate decision expectations crystallising

The June ECB meeting date will be confirmed this week. Several ECB Governing Council members expected to speak — their commentary on inflation and growth trade-offs will set market positioning. Watch for hawkish vs dovish split signals.

5. Iran deal timeline / Hormuz reopening

If Trump approves the memorandum this week, oil falls sharply. Energy equities reprice lower; defense stocks reverse gains. If talks break down, reverse. The binary event could define the week's direction for commodities and inflation expectations.

THIS MONTH'S TOP 5

1. Strait of Hormuz reopening — magnitude and timeline

Full normalisation of Hormuz tanker flows would unwind May's ~16% oil decline further, reduce inflation pressure globally, and reset energy sector earnings. The most consequential single macro catalyst for June and Q3.

2. ECB June rate decision

The ECB meeting in June is the focal point for European rates. A 25bp hike to 2.25% deposit rate is possible given April CPI at 3%. The decision will move EUR/USD, Bunds, and EUR IG credit spreads, and reset the DCM window for July.

3. US Fed policy path post-payrolls

June NFP and subsequent CPI data will set the table for the Fed's June meeting (mid-month). Market pricing is "higher for longer" — any deviation in either direction reshapes the dollar, 10Y yields, and global risk appetite through June.

4. AI capex cycle validation — HPE, Nvidia results, hyperscaler commentary

Dell reset expectations dramatically upward. HPE (today), then Nvidia, then hyperscaler capex guidance from AWS/Azure/GCP will either validate or challenge the idea that AI server demand is inflecting into a multi-year super-cycle. Sector valuations are pricing near-perfection.

5. G7 and trade policy developments

With US tariff architecture being rebuilt under new legal authority post-Supreme Court ruling, June could see new trade measures. G7 summit discussions on Iran, energy security, and trade dependencies will shape sentiment into Q3.

15. KEY TRENDS TO WATCH

1 DAY — TODAY'S SESSION DRIVERS

- ▶ **Iran deal headline risk:** Any presidential statement or Iranian media response on the Hormuz ceasefire before or during the European session will move oil 3-5% and cascade across energy equities, defense names, and shipping stocks. Watch all sources.
 - ▶ **ISM Manufacturing PMI (May) at 15:00 BST:** First hard US macro data of June. April at 52.7 was solid. Consensus not yet available. This will set the tone for afternoon US trading and the overnight tape.
 - ▶ **AI trade momentum (Dell spillover, HPE pre-announcement):** European semiconductor and AI-adjacent names likely to open higher on Dell's result. HPE earnings tonight are the key event risk into close. Pre-positioning in HPE options likely elevated.
 - ▶ **Dollar watch:** DXY near 99 and soft. Any dollar move — either direction — will affect commodity-linked equities and EM flows. Watch the 99 support level.
-

1 WEEK — KEY APPOINTMENTS AND THEMES

- ▶ **US Nonfarm Payrolls (Friday 5 June):** The week's dominant event. Labour market strength vs Fed policy path — outcome defines next 2-3 weeks of rate and FX positioning.
 - ▶ **Eurozone CPI Flash (Tuesday 2 June):** If April's 3.0% energy-driven print persists or rises in May, the ECB hike case solidifies. Markets are positioning for it — a miss would trigger a significant EUR rates rally.
 - ▶ **ECB speaker commentary:** With the June ECB meeting approaching, hawkish vs. dovish signals from Governing Council members this week will shape EUR IG spread direction and DCM issuance timing.
 - ▶ **Iran deal — formalisation or breakdown:** Each day without confirmation increases deal uncertainty. Watch for executive action or Iranian counter-statement. A week of headline risk with binary daily outcomes.
-

1 MONTH — MAJOR DEADLINES AND UNDERLYING TRENDS

- ▶ **ECB June rate decision:** A 25bp hike to 2.25% deposit rate is live. European credit spreads and EUR IG issuance windows will reflect this. Funding conditions for European corporates remain sensitive to each 25bp move.
-

- ▶ **Hormuz reopening timeline and oil repricing:** If Hormuz reopens during June, WTI could fall toward \$75-80, reducing energy sector earnings and significantly cutting Eurozone inflation. The ECB might then pause its intended June hike — feedback loop between Iran deal and ECB is real.
- ▶ **AI capex super-cycle validation through June earnings:** Nvidia results expected mid-June. Hyperscaler commentary from Amazon, Microsoft, and Google on cloud/AI capex will either confirm Dell's data or flag order concentration risks. This will be the defining equity narrative of June.
- ▶ **US tariff architecture under new legal authority:** Post-Supreme Court ruling, the administration is rebuilding tariff policy under Section 232, Section 301, and IEEPA authorities. New measures in June could disrupt supply chains. Watch especially for semiconductor, steel, and critical minerals actions.
- ▶ **Summer liquidity window closing for DCM:** June is the last active month before the summer DCM slowdown. Issuers with refinancing needs will accelerate execution. Watch for large syndicated EUR IG and SSA transactions particularly in the first two weeks of June.
