

MORNING BRIEFING — SUNDAY 14 JUNE 2026

LONDON BST

Generated ~07:00 BST

WEEKEND EDITION

Markets closed today

IRAN DEAL IMMINENT

Monday pre-open briefing covering developments since Friday 12 June US close and Saturday-Sunday breaking news. European cash markets are closed today (Sunday). Next cash open: Monday 15 June 07:00 BST. G7 Summit in Evian, France opens Monday 15 June. FOMC meets Tuesday-Wednesday 16-17 June. Last full trading session: Friday 12 June 2026.

2. IMPORTANT NEWS

Trump: US-Iran deal to be signed TODAY – Strait of Hormuz reopens automatically

Source: CNBC, CBS News, NewsNation, NPR – President Trump announced Saturday via Truth Social that the US-Iran peace agreement will be signed Sunday 14 June, ahead of the G7 summit in Evian. The MoU would reopen the Strait of Hormuz immediately upon signing. Iran's foreign ministry (Baghaei) expressed doubt on timing but did not deny the substance. UK and France confirmed willingness to assist with demining the strait at the G7 on Monday. Oil markets are expected to gap lower at Monday open if signing is confirmed. Execution risk remains: previous signals of a deal this year proved premature.

G7 Summit opens Monday in Evian – Iran deal, rare earths, tariff deadline on table

Source: Elysee.fr, TechTimes, CFR, EU Council – The 52nd G7 summit runs 15-17 June in Evian-les-Bains, France. Three market-relevant clusters dominate: (1) Iran Hormuz deal mechanics and demining timeline; (2) a coordinated critical minerals framework to counter China's 70-90% dominance in rare earth processing; (3) resolution or extension of the US tariff negotiation window expiring this month. Outcomes will set macro direction for the rest of Q2.

FOMC June 16-17: Kevin Warsh's debut – hold expected, dot plot the live risk

Source: Chase, Mitrade, Globe and Mail, Fortune – Kevin Warsh chairs his first FOMC meeting Tuesday-Wednesday. Markets price a 98.3% probability of no rate move (hold at 3.50-3.75%). The live risk is the updated Summary of Economic Projections: if the dot plot removes any 2026 cuts, risk assets could reprice sharply. Trump publicly warned against any rate increase ahead of the meeting. Warsh's press conference language on inflation and the Iran-driven energy shock will be closely parsed.

SpaceX (SPCX) closes first day +19.2% at \$160.95 – largest IPO in history

Source: CNBC, Yahoo Finance, Investing.com – SpaceX priced at \$135/share on 12 June, raising \$75bn at a \$1.75tn valuation. Shares opened at \$150, hit a session high of \$168.75, and closed at \$160.95. Monday marks the first full regular trading session. IPO lock-up terms and secondary-market demand will drive near-term direction. Broad tech sentiment remains supported.

ECB hike +25bp to 2.25% on 11 June – first rise since 2023

Source: ECB press release, Euronews, Bloomberg – The ECB raised its deposit rate to 2.25%, marginal lending to 2.65%, with effect from 17 June. Lagarde cited energy-driven inflation (EZ CPI 3.2% in May). Staff projections raised headline CPI to 3.0% for 2026. Markets now price one further hike by September and a 92% probability of a third before year-end. Bund yields spiked to near three-week highs before partially retracing on Iran deal news.

3. EUROPEAN FUTURES (PRE-OPEN)

Note: 14 June is a Sunday. European cash markets and futures are closed. Levels below reflect Friday 12 June closing prices. Monday direction is assessed from weekend news flow. Data collected ~07:00 BST.

INDEX	LAST CLOSE (FRI 12 JUN)	MONDAY BIAS	DRIVER
Euro Stoxx 50	~6,154	Positive bias	Iran deal signing, oil lower, G7 clarity expected
DAX	24,209.71	Positive bias	Export sector benefits from Hormuz reopening; ECB hike headwind partly offset
CAC 40	<i>n/a</i>	Positive bias	France hosts G7; TotalEnergies drag vs. Airbus and luxury uplift
FTSE 100	10,303.88	Positive bias	Airlines, consumer names lift; energy majors weigh; sterling stable
S&P 500 Futures	7,431.46 (cash close)	+0.3 to +0.6% est.	Iran deal confirmation bullish; FOMC uncertainty caps upside
Nasdaq Futures	25,888.84 (cash close)	+0.2 to +0.5% est.	SpaceX second-week momentum; tech broadly supported

Direction assessments are analytical estimates based on weekend news flow. Not live quotes. Verify at Monday open.

4. LAST CLOSES — FRIDAY 12 JUNE 2026

Saturday 13 June and Sunday 14 June are non-trading days. Last full session: Friday 12 June.

INDEX	CLOSE	CHANGE (PTS)	% CHANGE
Euro Stoxx 50	~6,154	est. +90	~+1.5%
DAX	24,209.71	+14.5	+0.06%
CAC 40	n/a	n/a	n/a
FTSE 100	10,303.88	+49.38	+0.48%

Euro Stoxx 50 and Stoxx 600 gained roughly 1.5% on Friday, led by consumer, industrial, and transport names as oil fell 3.4%. DAX underperformed on ECB hike digestion. FTSE outperformed on falling Brent despite energy sector drag. Source: Trading Economics, CNBC.

5. US MARKETS — FRIDAY 12 JUNE SESSION

INDEX	CLOSE	CHANGE (PTS)	% CHANGE
S&P 500	7,431.46	+37.1	+0.50%
Dow Jones	51,202.26	+354	+0.70%
Nasdaq	25,888.84	+80	+0.31%
SpaceX (SPCX)	\$160.95	+\$25.95	+19.2% (IPO debut)

Session tone: **Positive.** Broad-based gain on two catalysts: SpaceX's record Nasdaq debut absorbed \$75bn in new equity while lifting the broader tech complex, and Trump's announcement of an imminent Iran peace deal sent oil into a 3.8% decline, boosting airlines, consumer discretionary, and industrials.

Leading sectors: Technology (SpaceX halo, SPCX +19.2%), Consumer Discretionary (oil cost benefit), Industrials (Hormuz supply chain optimism), Airlines and Transport.

Lagging sectors: Energy (ExxonMobil, Chevron, ConocoPhillips under pressure on Brent -3.44%), Financials (mixed on ECB/Fed rate uncertainty and curve movements).

Key takeaway: The combination of the largest-ever IPO and a geopolitical de-escalation narrative produced a strong weekly close. The S&P 500 and Dow built on prior records. The Nasdaq trailed slightly as SpaceX capital raised crowded out some existing tech names. Monday faces FOMC week uncertainty as the main headwind.

6. ASIAN MARKETS – LAST SESSION (FRIDAY 12 JUNE)

Asian cash markets are closed Saturday and Sunday. Figures below are Friday 12 June closes, which represent the overnight session referenced in the Saturday 13 June briefing. No new Asian session has occurred since.

INDEX	LEVEL	CHANGE (PTS)	% CHANGE
Nikkei 225	66,020.04	+1,803	+2.81%
Hang Seng	24,718.10	+469	+1.93%
Shanghai Composite	4,031.51	+44.7	+1.12%
Kospi	n/a	n/a	n/a

Overall tone: Strongly positive on Friday. Risk-on across the region following Wall Street gains and Iran deal signals. Lower oil prices reduced import cost pressure for Japan (a net importer), boosting exporters and consumer names. Nikkei's 2.81% was the standout.

Drivers: US-Iran peace optimism; Brent -3.44%; SpaceX IPO positive sentiment; yen stable; Hang Seng lifted by resource and consumer names. Shanghai lagged on domestic demand concerns and regulatory noise.

Monday outlook: If the Iran deal is confirmed signed Sunday, expect Asian markets to open Monday with further gains, particularly in Japan (energy importer), South Korea (semiconductors, shipping), and Hong Kong (China resource exporters). If deal confirmation is delayed or denied by Iran, reversal risk is significant.

7. COMMODITIES

Levels as of Friday 12 June close. No weekend trading in futures for most contracts. Monday open will reflect Iran deal weekend news.

ASSET	PRICE	CHANGE	% CHANGE	NOTE
Brent Crude	\$87.27/bbl	-\$3.13	-3.44%	2-month low; further downside likely Monday if deal signed; \$80/bbl next key support
WTI Crude	\$84.29/bbl	-\$3.43	-3.90%	Settled at \$84.33; Iran Hormuz reopening removes largest supply disruption of 2026
Gold	~\$4,082/oz	~-\$120	~-2.9%	Safe-haven demand unwinding on peace deal; ECB hike raises opportunity cost; \$4,000 key support
Natural Gas (Henry Hub)	\$3.14/MMBtu	+\$0.05	+1.75%	Above-normal June temperatures; LNG export demand firm; European TTF fell sharply on Iran deal
Natural Gas (TTF)	~€47.85/MWh	-€1.84	-3.70%	Hormuz reopening reduces European energy security premium; further decline if deal confirmed
Copper (COMEX)	~\$6.60/lb	est. firm	est. flat-to-up	Near record highs (~\$6.72 in May); G7 critical minerals agenda supportive; China demand uncertain

Data collected ~07:00 BST. Source: Trading Economics, OilPriceAPI, Barchart. Copper level estimated from recent range data.

8. RATES & FX

ASSET	LEVEL	CHANGE	DIRECTION	NOTE
US 10Y Treasury	4.49%	+2bps	Higher	Inflation expectations stickier post-ECB hike; Iran deal partially offsets energy inflation premium
German 10Y Bund	~3.05%	near 3-week high	Higher	Post-ECB hike repricing; came off slightly on Iran deal optimism; 3.00% is key psychological level
EUR/USD	1.1580	flat/ consolidating	Sideways	ECB hike positive for EUR; geopolitical risk and DXY resilience cap gains; 1.16 is near-term resistance
GBP/USD	~1.3450	above 200-day SMA	Mild positive bias	Sterling holding key moving average; UK CPI Wednesday 17 June is critical catalyst for BOE pricing
DXY (Dollar Index)	~99.80	-0.06%	Slightly weaker	Dollar near key 100 level; Iran deal weighs on safe-haven demand; FOMC hold this week limits USD upside

Data collected ~07:00 BST. Source: Trading Economics, MarketPulse/OANDA, FX analysis. Friday 12 June levels. FX rates are indicative; verify at market open.

9. DCM — PRIMARY BOND MARKET

RECENT ISSUANCES (WEEK OF 9-12 JUNE)

No confirmed individual deal data sourced for Friday 12 June. European primary markets typically see minimal Friday activity, particularly in post-central-bank-decision weeks. The ECB's 11 June hike to 2.25% likely prompted most issuers to wait for spread stability before printing. Last confirmed active issuance window was earlier in the week. Specific deal data for Friday: *n/a*. For the broader week, EU-Bond program (H1 2026 target raised to €100bn) and regular SSA auctions were the primary volume contributors.

PIPELINE / EXPECTED THIS WEEK (W/C 15 JUNE)

The combination of the ECB rate hike and Iran deal resolution creates a bifurcated outlook for primary markets this week.

Supportive factors: Iran deal de-escalation and associated risk-on tone will narrow credit spreads, encouraging issuers to front-load. Energy sector disruption premium is unwinding. FOMC hold (widely expected) removes the USD-rate uncertainty that has deterred some IG issuers from the EUR market.

Constraining factors: Higher ECB base rate (2.25%) raises all-in EUR funding costs. If the dot plot on Wednesday removes 2026 cuts, the credit window may tighten again. HY remains cautious.

Likely candidates: IG corporate industrials, utilities, and financials are most likely to test the market Monday-Tuesday before FOMC uncertainty peak. SSA activity (EU-Bonds, agency paper) expected to continue. AT1 and Tier 2 bank paper is a candidate if bank spreads tighten on ECB hike NIM outlook. Specific mandated deals: *n/a (not yet announced)*.

KEY SPREADS

INSTRUMENT	LEVEL	CHANGE	DIRECTION
iTraxx Main (5Y)	<i>n/a</i>	<i>n/a</i>	Expected tightening on Iran deal / risk-on open
iTraxx Crossover (5Y)	<i>n/a</i>	<i>n/a</i>	Expected tightening; HY caution on ECB hike limits move
CDX IG (5Y)	<i>n/a</i>	<i>n/a</i>	Expected tightening; FOMC dot plot the key swing factor
Avg Euro Corporate IG Spread	<i>n/a</i>	<i>n/a</i>	Directionally tighter; base rate rise raises all-in cost

Specific spread levels not available from weekend data sources. Live levels available at Monday open via Bloomberg/ICE.

COMMENTARY

The primary market window for the week of 15 June is set to open under divergent pressures. The Iran deal de-escalation is the single largest positive catalyst for credit spreads in months: a Hormuz reopening removes the energy supply tail risk that has driven the energy inflation premium into rates and compressed the bid for risky assets. Tighter spreads plus risk-on equity tone should produce a constructive Monday-Tuesday issuance window.

The ECB hike complicates the picture for EUR IG. The 25bp rise on 11 June has already pushed the EUR base rate above levels last seen in 2023. Issuers with flexible currency programs will weigh EUR vs. USD and GBP options. Financials (especially French and German banks) stand to benefit from NIM expansion, making AT1 and senior non-preferred formats more compelling for investors. Industrials, transport, and energy names will attract demand on the back of the Hormuz reopening narrative.

The key window is Monday-Tuesday before the FOMC decision on Wednesday 17 June. If Warsh's dot plot signals no 2026 cuts, risk assets face a sharp repricing that would shut the window for the balance of the week.

10. ECONOMIC CALENDAR

Sunday 14 June: No market activity or data releases. Key events for the week of 15 June below. All times London BST. FOMC is the dominant macro event.

LONDON TIME	DATE	REGION	INDICATOR	CONSENSUS	IMPORTANCE
All day	Mon 15 Jun	Global	G7 Summit Day 1 – Evian (Iran deal, critical minerals, tariffs)	Deal expected	High
~08:00	Mon 15 Jun	Eurozone	Industrial Production (April)	<i>n/a</i>	Medium
All day	Tue 16 Jun	Global	G7 Summit Day 2 – Evian + FOMC Day 1	–	High
09:30	Tue 16 Jun	UK	Unemployment Rate / Average Earnings (April)	<i>n/a</i>	High
09:30	Wed 17 Jun	UK	CPI Inflation (May)	<i>n/a</i>	High
13:30	Wed 17 Jun	US	Retail Sales (May)	<i>n/a</i>	High
19:00	Wed 17 Jun	US	FOMC Rate Decision + SEP Dot Plot	Hold at 3.50-3.75%	CRITICAL
19:30	Wed 17 Jun	US	Fed Chair Warsh Press Conference	–	CRITICAL
10:00	Thu 18 Jun	Eurozone	HICP Inflation Final (May)	3.2% YoY	High
09:30	Fri 19 Jun	UK	Retail Sales (May)	<i>n/a</i>	Medium
13:30	Fri 19 Jun	US	Housing Starts / Building Permits (May)	<i>n/a</i>	Medium

Specific consensus figures not available from current search sources. FOMC decision and Warsh press conference dominate. UK CPI Wednesday is critical for BOE path pricing. G7 outcomes run concurrent with market events all week. Source: Economic calendar aggregators, FOMC schedule.

11. CORPORATE EVENTS & EARNINGS

Sunday 14 June: No scheduled earnings or corporate events. Weekend only.

KEY EVENTS WEEK OF 15 JUNE

DATE	COMPANY / EVENT	TYPE	SIGNIFICANCE
Mon 15 Jun	SpaceX (SPCX)	First full regular trading day	High – IPO price discovery, lock-up terms, secondary demand
Mon-Fri	Energy majors (TotalEnergies, Shell, BP)	Post-Iran-deal repricing	High – Brent slide forces earnings estimate revisions
Wed 17 Jun	Adobe (ADBE)	Q2 FY2026 Earnings	High – AI-driven creative suite revenue; market cap \$350bn+
Thu 18 Jun	Kroger (KR)	Q1 2026 Earnings	Medium – consumer spending read-through
All week	G7 Evian (15-17 Jun)	Critical minerals framework	High – policy framework for rare earths, Hormuz demining deal, tariff successor

12. STOCKS TO WATCH

COMPANY	TICKER	REASON	PROBABLE DIRECTION
IAG / Lufthansa / Air France-KLM / Ryanair	IAG LN / LHA GY / AF FP / RYA ID	Iran deal + Brent -3.4% = major fuel cost tailwind; Hormuz reopening reduces route risk premium; structural positives accumulating	Up – potentially strongly
TotalEnergies / Shell / BP	TTE FP / SHEL LN / BP LN	Brent at 2-month low (\$87.27); further downside expected if deal confirmed; E&P earnings under revision pressure; dividend yield cushion	Down – energy sector underweight justified
SpaceX (SPCX)	SPCX US (Nasdaq)	First full week of trading after +19.2% debut; secondary market price discovery; IPO allocation sell pressure may emerge vs. genuine institutional demand	Volatile – directional risk both ways; watch \$150 support
Glencore / Rio Tinto / Anglo American	GLEN LN / RIO LN / AAL LN	G7 critical minerals framework to be announced in Evian; copper near record highs (\$6.60/lb); rare earth policy a structural tailwind for diversified miners	Up – G7 minerals policy catalyst
Airbus	AIR FP	Iran deal raises long-term prospect of resuming civil aviation sales to Iran; G7 host France = political boost for European industrial champion; positive oil cost read for airline customers	Mildly up – sentiment and medium-term order book optionality
Maersk / Hapag-Lloyd	MAERSK B DC / HLAG GY	Hormuz reopening restores direct shipping lanes through the strait; reduced rerouting premium; net positive for volumes but partly offset by lower freight rate premium from normalisation	Up – route normalisation positive
BNP Paribas / Deutsche Bank / HSBC	BNP FP / DBK GY / HSBA LN	ECB hike to 2.25% expands NIM outlook; Iran deal reduces systemic risk discount; DCM pipeline reopening positive for fee income; rate path steepening supports bank book profitability	Up – financials sector favoured post-ECB hike
Rheinmetall / BAE Systems / Thales	RHM GY / BA LN / HO FP	Iran de-escalation creates near-term sentiment headwind for defence; structural European rearmament theme (Ukraine, NATO 5% GDP pledges) remains in place; any pullback is tactical entry point	Slightly down short-term – sell on peace news; hold/buy for structural thesis

13. MACRO / CORPORATE / POLITICAL HIGHLIGHTS

MACRO

ECB RATE REGIME SHIFT The ECB hiked 25bp to 2.25% on 11 June, its first increase since 2023 and an explicit reversal of the prior easing cycle. Staff projections raised 2026 CPI to 3.0%. Markets now fully price a second hike by September and an 80% probability of a third. Higher EUR rates lift the cost of capital for Eurozone borrowers and challenge growth-oriented equity valuations.

FOMC – HOLD BUT DOT PLOT RISK Kevin Warsh chairs his first FOMC meeting 16-17 June. A hold at 3.50-3.75% is near-certain (98.3% CME probability). The risk is the updated dot plot: if 2026 rate cuts are removed from the median projections, US Treasuries will sell off and risk assets will reprice. Warsh's press conference tone on the Iran energy shock and inflation trajectory will be the key market signal.

IRAN DEAL – OIL AND INFLATION PATH RESET If the Hormuz deal is signed Sunday and the strait reopens within days, the oil price path changes materially. Energy CPI – which accounted for over 60% of May's monthly US CPI gain – would reverse sharply. This reduces the probability of further Fed and ECB hikes beyond what is currently priced. A sustained Brent move below \$85/bbl would shift market consensus toward resumed easing by Q4.

CORPORATE

SPACE X – SECONDARY MARKET DYNAMICS SPCX's +19.2% IPO debut was the largest in history by capital raised (\$75bn). Secondary trading this week will reveal the quality of the institutional book vs. IPO allocation flippers. At \$160.95, implied market cap is \$2.1tn – within range of Amazon. The float is extremely thin relative to total shares; any imbalance between supply and demand creates significant volatility. Watch for lock-up detail disclosure.

ENERGY SECTOR EARNINGS REVISION RISK With Brent down 3.4% on Friday and likely to fall further if the Iran deal is confirmed, energy sector earnings estimates for Q2 2026 face material downgrade pressure. TotalEnergies, Shell, and BP all had consensus assuming sustained elevated oil prices. Analysts will begin revising on Monday. The sector remains cash-generative at \$87/bbl but the narrative tailwind disappears.

POLITICAL / GEOPOLITICAL

US-IRAN DEAL – EXECUTION RISK Trump announced the deal for Sunday; Iran's foreign ministry expressed doubt on timing. The substance is agreed (Hormuz reopening, MoU toward nuclear talks), but sequencing and verification mechanisms remain unclear. UK and France have agreed to assist with demining at G7. If signing is delayed beyond Monday's G7 opening, oil markets may partially retrace. If Iran walks back, a full reversal of the Friday gains is likely.

G7 CRITICAL MINERALS – CHINA COUNTERMOVE The G7 in Evian is expected to announce a coordinated policy framework on rare earth and critical minerals, including potential price floors, joint stockpiles, and investment screening against Chinese dominance. China controls 70-90% of rare earth mining and processing. Any G7 counter-framework will be welcomed by Western mining companies (Rio, Glencore, Anglo) but may provoke Chinese trade retaliation. The US "Project Vault" \$12bn stockpile initiative is part of this broader push.

US TARIFF DEADLINE – G7 WINDOW A US tariff negotiation deadline is expiring this month. The G7 Evian summit is the focal point for whether the Trump administration extends, modifies, or escalates the framework. Outcome unknown; failure to resolve risks renewed trade tension and sector-specific equity volatility (autos, semiconductors, industrials).

14. KEY THEMES – TOP 5 BY HORIZON

TODAY'S TOP 5 (MONDAY 15 JUNE SESSION)

1. IRAN DEAL CONFIRMATION Whether the signing occurs Sunday 14 June or is delayed sets the open tone. Confirmed deal = oil gaps lower, airlines and industrials gap up, energy sector underperforms, risk-on across the board. Denial or delay = full reversal, energy sector bounces.

2. G7 DAY 1 OPENING STATEMENTS – EVIAN First day communiques on Iran (Hormuz demining), critical minerals framework, and tariff status. Any policy announcement with market consequences will move specific sectors (mining, energy, industrials) intraday Monday.

3. SPACEX (SPCX) FIRST REGULAR SESSION Monday marks SPCX's first day outside IPO book stabilisation. Secondary dynamics – whether IPO flippers sell or institutional buyers add – will drive tech sentiment and set the Nasdaq tone.

4. EUROPEAN CREDIT WINDOW OPENING First opportunity for IG corporates and financials to test the post-ECB-hike primary market. If iTraxx Main tightens on Iran deal open, expect mandates announced Monday morning for books opening Tuesday.

5. OIL OPEN – MONDAY ASIAN/EUROPEAN PRICE The first oil tick on electronic markets Sunday evening (20:00 BST) will set the risk tone globally. A Brent print below \$85 = confirmed deal pricing; above \$90 = deal collapse or delay. This is the single most informative data point of the pre-open.

THIS WEEK'S TOP 5 (15-19 JUNE)

1. FOMC DECISION + WARSH DOT PLOT (WED 17 JUN) The most consequential event of the week. Hold is certain; dot plot and Warsh's tone on the inflation path are the live risks. Any hawkish surprise (removal of 2026 cut, language on oil / energy price stickiness) would cause a significant Treasury selloff and equity de-rating.

2. G7 OUTCOMES ON CRITICAL MINERALS AND TARIFFS (15-17 JUN) The G7 communique on rare earths will set the medium-term framework for the mining sector. A tariff resolution (or extension) reduces near-term trade war tail risk and supports cyclical equities.

3. UK CPI (WED 17 JUN) UK inflation data directly drives BOE rate expectations. Above-consensus CPI (energy pass-through, services stickiness) would tighten the squeeze on UK consumers and raise the probability of BOE hike(s). GBP and gilts are the primary instruments.

4. ECB RATE HIKE IMPLEMENTATION (FROM WED 17 JUN) The 25bp ECB hike announced 11 June takes effect 17 June. EUR money markets will adjust, affecting repo rates, EURIBOR fixings, and bank funding costs from Wednesday. Peripheral sovereign spreads (BTPs, Bonos) to watch for contagion.

5. US RETAIL SALES (WED 17 JUN) Consumer spending data is critical for validating or challenging the "soft landing" narrative. A weak print combined with hawkish FOMC language would create stagflation optics and weigh on risk assets. A strong print justifies the equity rally.

THIS MONTH'S TOP 5 (JUNE 2026)

1. IRAN PEACE DEAL – FULL IMPLEMENTATION The deal text, demining timeline, and Strait of Hormuz reopening schedule will determine how much of the oil risk premium is permanently removed. Full Hormuz normalisation = structural downward repricing of energy and a material reduction in global inflation expectations.

2. FED POLICY RESET UNDER WARSH Warsh's first two meetings (June and July) will establish the new Fed's communication style and inflation tolerance. Market re-anchoring of the 2026-2027 rate path is the key portfolio allocation driver for the rest of the year.

3. ECB – SECOND HIKE TIMING The ECB signalled further tightening. Whether the second hike comes in July or September depends on June inflation data. July pricing (fully priced per search data) would be the most aggressive ECB cycle since 2022. EUR rates and credit spreads will reflect this.

4. SPACEX (SPCX) PRICE FORMATION The world's largest-ever IPO will spend June establishing a secondary market equilibrium. The stock is a proxy for long-duration growth and space infrastructure. Its price action affects Nasdaq composition, index weighting, and broader tech sentiment for Q3.

5. G7 TARIFF FRAMEWORK RESOLUTION The US tariff deadline expires this month. The G7 Evian summit (15-17 June) is the venue for resolution. A deal reduces trade uncertainty and supports risk assets into Q3; failure to resolve kicks the problem into H2 and re-introduces a tail risk that had faded from consensus.

15. KEY TRENDS TO WATCH

1 DAY – MONDAY 15 JUNE

The Iran deal confirmation (or denial) is the pivot. Watch the Sunday evening oil electronic open (Brent CME Globex) for the first price signal. If Brent opens below \$85/bbl, expect European equities to open up 0.5-1.0%, led by airlines, industrials, and consumer names. Energy sector will underperform regardless. SpaceX secondary trading will set the Nasdaq temperature for the week. ECB hike implementation commences Wednesday – watch EURIBOR and money market rates from Tuesday evening.

1 WEEK – 15-19 JUNE

FOMC on Wednesday is the dominant risk event. The market is positioned for a hold; the surprise would be hawkish dot plot language. G7 communique outcomes (critical minerals, tariffs) will drive sector-specific moves across the week. UK CPI on Wednesday creates simultaneous cross-asset volatility (GBP, gilts, UK equities). Adobe earnings Wednesday give a read on AI-driven software demand. The primary bond market will either open aggressively Monday-Tuesday or go into hibernation if risk sentiment sours.

1 MONTH – JUNE 2026

Three structural shifts are in motion simultaneously. First, the Iran deal – if it holds – removes the largest energy market disruption of 2026 and resets the inflation path for both the Fed and ECB. Second, the new Fed under Warsh is establishing its policy framework; the June-July FOMC sequence will define market expectations for the rest of the year. Third, the G7 critical minerals framework, if substantive, triggers a structural repricing of the mining sector and accelerates Western supply chain diversification away from China. June 2026 has the potential to be a pivotal month for all three macro regimes (energy, rates, supply chain) simultaneously.
