

SECTION 1

Morning Briefing — Monday, 18 May 2026

London Pre-Open Edition

Generated: 05:45 BST | Data collected: 04:00–05:40 BST | Sources: Reuters, Bloomberg, CNBC, Yahoo Finance, Trading Economics, FXStreet, FX Leaders

2. Important News

Kevin Warsh officially assumes the Federal Reserve chairmanship as Powell's term expired Friday

NPR / PBS / Yahoo Finance — May 13–18, 2026

Warsh confirmed by Senate 54-45. Markets now price a 45% probability of at least one Fed rate hike in 2026 — up sharply. Warsh's hawkish lean and the ongoing criminal investigation into the Fed (since resolved) have amplified rate-path uncertainty. First public communications from Warsh will be closely watched for any forward guidance reset.

US markets sold off sharply Friday — Dow -537 pts, S&P -1.24%, Nasdaq -1.54% — as 10Y yield hit 4.55%, a 12-month high

CNBC / TheStreet — May 15, 2026

Tech led the decline. Rising yields = equity multiple compression, especially for high-duration growth names. The move signals a regime shift: markets are no longer pricing cuts, they are pricing potential hikes. European equities fell in sympathy (DAX -2.1%, Euro Stoxx -1.8%).

Trump warns Iran to "get moving, FAST" as US-Iran talks stall — Brent surges past \$109/bbl, Strait of Hormuz risk elevated

CNBC Asia / FX Leaders — May 18, 2026

Geopolitical risk premium now embedded in oil. Any Hormuz disruption would spike energy prices further, feed inflation expectations, and compound the rate hike narrative. Energy equities, tankers, and defense stocks are the direct beneficiaries; all other sectors face margin pressure from higher input costs.

Trump-Xi summit ends without major policy breakthrough — tariff uncertainty persists

CNBC / Reuters — May 15–18, 2026

No substantive de-escalation on tariffs announced. Markets had priced some optimism into the summit. The lack of outcome extends supply chain uncertainty and weighs on risk sentiment in Asia-Pacific, particularly on Hang Seng (-1.49% overnight). China-exposed European industrials and luxury names remain under pressure.

Empire State Manufacturing Index surges to 19.6 in May vs 6.2 consensus (April: 11.0) — strongest beat in months

Schwab / CNBC — May 15, 2026

Strong US manufacturing data corroborates the "no-cut, possible hike" narrative. Reinforces Warsh's inherited case for holding rates firm. Alongside sticky core PCE at 3%, this number pushes back against any near-term easing. US yields and the dollar responded positively.

3. European Futures — Pre-Open (~05:45 BST)

INDEX FUTURE	LEVEL	IMPLIED MOVE	BIAS
Euro Stoxx 50	<i>n/a</i>	<i>n/a</i>	Risk-off bias
DAX (Germany)	<i>n/a</i>	<i>n/a</i>	Risk-off bias
CAC 40 (France)	<i>n/a</i>	<i>n/a</i>	Risk-off bias
FTSE 100 (UK)	<i>n/a</i>	<i>n/a</i>	Mixed — oil support
S&P 500 (ESZ6)	<i>n/a</i>	<i>n/a</i>	Risk-off bias
Nasdaq 100 (NQZ6)	<i>n/a</i>	<i>n/a</i>	Risk-off bias

Specific pre-open futures levels were not retrievable at collection time. Based on Friday's heavy declines across US and European equities, persistent Asia weakness overnight, and continued geopolitical risk, European futures are expected to open under pressure. The FTSE 100 may show relative resilience given its commodity/energy weighting. Data collected approx. 05:40 BST.

4. Yesterday's Closes — Friday, 15 May 2026

INDEX	CLOSE	CHANGE	% CHANGE	TONE
Euro Stoxx 50	5,825	-106	-1.80%	Risk-off selloff
DAX (Germany)	23,951	-514	-2.10%	Tech & autos led lower
CAC 40 (France)	n/a	n/a	-1.97%	Broad selloff
FTSE 100 (UK)	n/a	n/a	-0.37%	Modest decline; energy offset losses

European equities closed sharply lower Friday as elevated energy prices, rising Treasury yields, and the Fed leadership transition weighed on risk appetite. Germany underperformed given heavy tech, autos, and chemicals weighting — all sectors sensitive to rate repricing and geopolitical supply disruption. FTSE 100 was the relative outperformer, cushioned by its large oil majors (Shell, BP) and miners. Data: Trading Economics / CNBC, ~17:30 BST Friday.

5. US Markets — Friday 15 May 2026 Session

INDEX	CLOSE	CHANGE (PTS)	% CHANGE
S&P 500	7,408.50	-93.1	-1.24%
Dow Jones Industrial Average	49,526.17	-537.29	-1.07%
Nasdaq Composite	26,225.14	-412.1	-1.54%

SESSION TONE & KEY TAKEAWAY

Risk-off Broad-based selloff. US 10-year Treasury yield spiked 9 basis points intraday to 4.55% — its highest level in 12 months — triggering repricing across equities. Technology and semiconductors were the session's biggest drags. Energy was the lone outperformer as WTI climbed towards \$106 and Brent broke above \$109 on Middle East tensions. Consumer discretionary and growth names were punished hardest.

LEADING SECTORS

Energy — Oil price surge lifted integrated majors and services. **Utilities** — defensive rotation bid in high-yield environment.

LAGGING SECTORS

Technology — Duration-sensitive; worst day in several weeks. **Consumer Discretionary** — Tariff overhang and rate fears. **Real Estate** — Yield-sensitive sector sold hard.

6. Asian Markets — Overnight Session, 18 May 2026

INDEX	LEVEL	% CHANGE	NOTE
Nikkei 225 (Japan)	n/a	-0.92%	Tech & exporters weighed by yield spike and JPY moves
Topix (Japan)	n/a	-0.77%	Broad Japanese selloff but marginally better than Nikkei
Hang Seng (Hong Kong)	n/a	-1.49%	Trump-Xi disappointment + Iran risk — tech and property led lower
Shanghai Composite (China)	4,126	-0.23%	Modest decline; domestic policy support limiting downside
Kospi (South Korea)	n/a	+1.15%	Outperformer; reversed early losses on domestic buying, Samsung bid
S&P/ASX 200 (Australia)	n/a	-1.32%	Resources weaker on China demand fears; banks fell

Asia-Pacific closed broadly lower. The dominant drivers were Trump's hawkish Iran warning, Wall Street's Friday selloff, rising US yields signalling tighter financial conditions globally, and the lack of tangible progress at the Trump-Xi summit. Hong Kong bore the brunt of the China/tariff disappointment. South Korea was the session's sole bright spot, with Kospi reversing initial losses on reported domestic institutional buying. Shanghai's modest fall suggests Beijing-linked stabilisation funds remain active. Data: CNBC Asia / Trading Economics, ~06:00 BST.

7. Commodities

COMMODITY	LEVEL	CHANGE	CONTEXT
Brent Crude (ICE)	~\$109.00 /bbl	+4.5%+ (Friday)	Iran/Hormuz risk premium. Highest in months. Watch \$110 resistance.
WTI Crude (NYMEX)	~\$106.00 /bbl	+4.5% (Friday)	Tracking Brent tightly. Spread stable ~\$3. Supply disruption fears dominant.
Gold (Spot)	~\$4,480 /oz	Slightly below \$4,500	Safe-haven demand tempered by rising real yields. Still well-supported.
Natural Gas (Henry Hub)	\$3.02 /MMBtu	+1.86% (May 17)	Near 7-week high on declining US output and in-line storage injection.
Copper (LME)	~\$6.35 /lb	n/a	China demand soft; tariff uncertainty caps upside. Trump-Xi no deal = headwind.

Notable: Brent above \$109 is significant — energy costs feed directly into European industrial margins, freight costs, and inflation indices. If geopolitical risk escalates further, a move toward \$115+ cannot be ruled out. Gold holding near \$4,480 despite rising real yields reflects ongoing uncertainty around Warsh's Fed path and geopolitical stress. Copper's relative weakness is a proxy for China demand skepticism post-summit. Data: OilPrice.com / Trading Economics / FX Leaders, ~05:40 BST.

8. Rates & FX

INSTRUMENT	LEVEL	CHANGE	NOTE
US 10Y Treasury Yield	4.63%	+9 bps (Fri session)	Highest since January 2025. Warsh + strong Empire State + oil = rate hike fears.
German Bund 10Y Yield	3.07%	Rising	Near highest level since May 2011. Energy inflation feeds ECB rate-hike expectations.
EUR/USD	1.1622	-0.04%	Dollar firming on rate hike narrative. EUR capped by ECB extended pause.
GBP/USD	1.3310	-0.13%	GBP weakened over week (high 1.365 on May 11). Month-to-date -1.66%.
DXY (US Dollar Index)	99.39	+0.11%	Approaching 1-month high. Rate hike odds + geopolitical safe haven.

Key watch: The US 10-year yield at 4.63% and rising is the single most important macro variable right now. A sustained move above 4.75% would trigger a meaningful equity repricing — particularly for tech/growth. The Bund at 3.07% is at historically elevated territory; European sovereign spreads (periphery vs core) merit monitoring. The DXY at 99.4 is approaching 100 — a psychological and technical level that could amplify dollar strength if broken. Data: Trading Economics / FXStreet / Federal Reserve, ~05:40 BST.

9. DCM — Primary Bond Market

Yesterday's Issuances

No specific deal data sourced for Friday 15 May 2026. Primary market activity was likely muted given the sharp rates move (+9 bps on US 10Y) and equity selloff. Issuers would have faced sharply wider IPT requirements on any late-session books. Verification recommended via IFR / GlobalCapital / Bloomberg DCM.

Pipeline / Expected Today

No specific mandates sourced. With 10Y yields elevated and sentiment risk-off, Monday morning supply is expected to be light. Any issuer attempting to open books early in the week faces a challenging backdrop. Watch for SSA/supranational names as potential early movers — they typically price regardless of conditions. Financials and corporates likely wait for market tone to stabilise.

Key Spreads

INDEX	LEVEL	CHANGE	DIRECTION
iTraxx Main (IG 5Y)	n/a	n/a	n/a — verify via Markit/Bloomberg
iTraxx Crossover (HY 5Y)	n/a	n/a	n/a — verify via Markit/Bloomberg
CDX IG (US 5Y)	n/a	n/a	n/a — verify via Markit/Bloomberg
Avg Euro Corp IG Spread	n/a	n/a	n/a — verify via Bloomberg/ICE BofA

Commentary

The primary market faces a difficult open. Friday's violent Treasury move (+9 bps on 10Y) and European equity selloff effectively shut the window for most risk-sensitive issuers. The Warsh transition creates additional uncertainty around the medium-term rate path — an unwelcome variable for IG and HY book-building alike. SSA and high-quality covered bonds will be the most resilient, but even those will face pushback on spread levels. This week's primary calendar will depend heavily on Monday's macro tone: if oil stays elevated and yields remain near recent highs, expect issuers to hold off until mid-week at earliest. High-yield primary almost certainly shut until risk appetite recovers. Financials and transport/energy corporates would face the steepest pricing penalty in current conditions. Data: ICMA / IFR / ION Analytics (general), specific spread levels unavailable at collection time.

10. Economic Calendar — Monday 18 May 2026

LONDON TIME	REGION	INDICATOR	CONSENSUS	IMPORTANCE
All day	Global	Warsh — first trading day as Fed Chair. Watch for any Fed communications/media appearances	—	HIGH
16:00	US	Foreign Portfolio Flows (March)	n/a	MEDIUM
19:50	Japan	GDP Q1 2026 (Preliminary)	n/a	MEDIUM

Light calendar day. The absence of major scheduled data releases shifts market focus entirely to geopolitics (Iran/oil), the Warsh Fed transition narrative, and corporate earnings (Ryanair, Baidu). Tuesday brings Pending Home Sales (US) and the data schedule picks up mid-week. Any unscheduled Fed-related statement from Warsh or FOMC members today would be the highest-impact event of the session. Data: Scotiabank / Trading Economics calendar.

11. Corporate Events & Earnings

Today — 18 May 2026

COMPANY	EVENT	KEY METRIC TO WATCH	TIMING
Ryanair Holdings (RYA / RYAAAY)	Full-year FY2026 results	Revenue vs \$15.47bn consensus; EPS vs \$2.07; Q4 EPS exp -\$0.42; traffic vs 208m passenger target	Pre-market
Baidu (BIDU)	Q1 2026 earnings	AI cloud revenue growth; advertising recovery; margin guidance	Pre-market

This Week — 19–22 May 2026

COMPANY	DATE	EVENT & FOCUS
Home Depot (HD)	Tue 19 May	Q1 2026; US housing market proxy; tariff impact on materials
NVIDIA (NVDA)	Wed 20 May	Q1 2026; \$78bn revenue consensus; \$1.77 EPS; AI data center demand, Blackwell ramp
Walmart (WMT)	Thu 21 May	Q1 FY2027; \$172.5-174.6bn revenue; \$0.65 EPS; tariff pass-through and consumer resilience
Target (TGT)	Wed 20 May	Q1 FY2026; discretionary spending vs tariff-hit SKUs
Lowe's (LOW)	Wed 20 May	Q1 2026; housing-adjacent spending
Generali (GASI IM)	This week	European insurer results; investment income in high-rate environment

SECTION 12

12. Stocks to Watch — 18 May 2026

RYAAY / RYA	Ryanair Holdings — Full-year FY2026 results today. Market watching for revenue vs \$15.47bn consensus and whether 208m passenger traffic target held. Fuel cost is key given Brent at \$109. Any miss on margin guidance given oil price trajectory will hit hard. Upside if Boeing delivery progress confirmed and summer capacity outlook raised.	VOLATILE
BIDU	Baidu — Q1 2026 earnings. Primary market focus: AI Cloud division growth trajectory and any read-through on China tech demand post-summit. Advertising revenue recovery pace. Geopolitical context: Trump-Xi summit without breakthrough = headwind for China tech sentiment.	VOLATILE
SHEL / BP / TTE	Shell / BP / TotalEnergies — Brent above \$109 is a direct earnings tailwind. Any further escalation of Iran/Hormuz risk would push these higher. Already benefiting from Friday's US selloff (energy was the sole outperformer). Watch for any Strait of Hormuz news during the Asian and London sessions.	UPSIDE
RHM / BA. / AIR	Rheinmetall / BAE Systems / Airbus — Ongoing Middle East military escalation sustains defense order book optionality. Rheinmetall and BAE are direct beneficiaries of both European defense spending (NATO 2% commitments) and Iran/Israel/US conflict escalation. Airbus watch: Boeing delivery schedule improvement could reduce competitive pressure but any Hormuz impact on aviation fuel is a cost risk.	UPSIDE (defense)
NVDA	NVIDIA — Reports Wednesday (May 20). Pre-earnings positioning today. Consensus at \$78bn revenue and \$1.77 EPS. AI data center demand, Blackwell GPU ramp, and any US-China chip export restriction commentary are the key variables. Friday's Nasdaq selloff (-1.54%) may have cleaned out some overhang, but rate sensitivity remains. Setup is binary.	BINARY (Wed)
HAFNI / TNK	Hafnia / Teekay Tankers — If Strait of Hormuz threats intensify, tanker rates would spike. Iran disruption scenario = rerouting of flows around Cape of Good Hope, dramatically extending voyage distances and tonne-mile demand. These names would move hard on any escalation headlines.	UPSIDE on escalation
UCG / DBK / BCS	UniCredit / Deutsche Bank / Barclays — Rising yields (Bund at 3.07%, US 10Y at 4.63%) are structurally positive for bank net interest margins. European banks have been among the strongest performers. Watch for any credit quality deterioration signals as rates bite borrowers — but for now, the rate environment remains a net positive for this sector.	UPSIDE bias

13. Macro / Corporate / Political Highlights

Macro

Federal Reserve transition: Kevin Warsh took the chair from Powell (term expired May 15). Warsh's economic lean is hawkish — he dissented against QE as a Fed Governor during the GFC era. Markets are pricing a 45% probability of at least one 2026 rate hike, with highest odds for a move to 3.75-4.00%. This is a material shift from the cut-cycle narrative that dominated late 2025.

US inflation / growth: Core PCE ended 2025 at 3% — a full percentage point above the Fed's 2% target. Empire State Manufacturing surged to 19.6 in May (consensus: 6.2). The US economy is growing, inflation is sticky, and the Fed may need to tighten. This combination — stagflation risk — is the worst-case scenario for equities.

European / ECB: German Bund yield at 3.07%, highest since May 2011. ECB in an "extended pause" — the bar for further easing is high unless data deteriorates sharply. Oil at \$109 makes an ECB cut in June very unlikely. European inflation will be re-anchored higher if Brent sustains above \$105.

Bank of England: BoE signalling dovish tilt — a cut may be imminent given UK labour market weakness. GBP at 1.3310 reflects this divergence from the US rate trajectory.

Corporate

Ryanair FY2026 results (today): The full year result is the definitive test of European aviation margins in a high-fuel, high-interest-rate environment. Boeing delivery improvements enabled Ryanair to push traffic guidance to 208m passengers — any confirmation of that target alongside decent unit revenue would be a positive read-across for Wizz Air, easyJet, and Lufthansa.

NVIDIA earnings (May 20) — the week's biggest event: \$78bn revenue and \$1.77 EPS is the bar. A beat + strong data center guidance could reverse last week's tech selloff. A miss or weak forward guidance could accelerate the de-rating. AI capex by hyperscalers (Microsoft, Google, Amazon, Meta) is the main revenue driver to watch.

Consumer proxies (Walmart, Home Depot — May 21+): These names will frame the US consumer spending picture: tariff pass-through, discretionary pullback, and whether lower-income households are being squeezed by inflation and higher rates. Critical for Fed policy calibration under Warsh.

Political / Geopolitical

Iran / Middle East: Trump's warning to Iran ("get moving, FAST") signals deteriorating diplomacy. Strait of Hormuz handles approximately 20% of global oil transit. Any disruption or naval incident would cause an immediate energy price shock — Brent could spike to \$120+ in a disruption scenario. Defense budgets, shipping rerouting, and inflation read-throughs are the market implications.

Trump-Xi summit fallout: The absence of meaningful tariff de-escalation leaves European exporters (autos, luxury, machinery) exposed to ongoing demand uncertainty in China. US-China tech restrictions remain in force. Hang Seng's -1.49% reflects the market's disappointment.

Fed independence concerns: Warsh's nomination came amid a DOJ criminal investigation into the Fed (since resolved) and sustained Trump pressure on Powell. Bond markets are watching whether Warsh will prioritise inflation control or yield curve management. Any signal of political interference in monetary policy would weaken the dollar and widen Treasuries vs Bunds.

14. Key Themes — Top 5 by Horizon

Today's Top 5 — Events Driving Monday's Session

1. Ryanair FY2026 full-year results

Test of European aviation cost resilience at \$109 Brent. Revenue, margin, and FY2027 guidance versus consensus will drive RYA and sector peers. Positive or negative surprise will ripple into easyJet, Wizz Air, and Lufthansa sentiment.

2. Baidu Q1 2026 — China AI/tech bellwether

China tech sentiment fragile after Trump-Xi disappointment. AI cloud monetisation progress is the bull case. Any miss on revenue or margin will compound HSI underperformance and extend risk-off in EM tech names.

3. Kevin Warsh's first day at the Fed

Markets will scrutinise any public statement or media appearance for signals on the rate path. A hawkish signal pushes US 10Y toward 4.75% and pressures equities. A neutral/calm tone could allow a partial recovery in tech. This is the dominant macro risk factor for today.

4. Oil at \$109 — inflation and sector implications

Brent above \$109 sustains the rate hike narrative, pressures airlines, chemicals, and consumer names, and supports energy majors, tankers, and defence. Every dollar above \$100 adds roughly 0.15-0.20pp to eurozone CPI — a direct ECB policy input.

5. Asia risk-off spillover into European open

Nikkei -0.92%, HSI -1.49% set a negative tone. European indices face a lower open. The question is magnitude — FTSE 100 should outperform given oil exposure; DAX and CAC face the most pressure given tech and luxury/China exposure respectively.

This Week's Top 5 — Events Structuring the Week

1. NVIDIA Q1 2026 earnings — Wednesday 20 May

The week's single most important event. \$78bn revenue, \$1.77 EPS consensus. AI infrastructure spend trajectory sets sentiment for semis, hyperscalers, and US growth equities for weeks. A beat could trigger a relief rally that offsets the Friday selloff.

2. Walmart Q1 FY2027 — Thursday 21 May

The most comprehensive read on US consumer health: tariff pass-through to prices, volume trends, and any downgrade to guidance under elevated oil/inflation backdrop. Walmart's CEO commentary on consumer behaviour under Warsh's Fed will be watched closely.

3. Iran / Hormuz escalation risk

Trump's warning creates a binary oil risk event. Any military incident in the Gulf would spike Brent above \$115, widen credit spreads, and force a reassessment of the ECB's extended pause. Defense names would surge; airlines and chemicals would collapse.

4. US 10Y yield — testing 4.75% resistance

A move through 4.75% on the US 10Y would be a structural break. It would force equity multiple compression, accelerate real estate/REIT selling, and create additional headwinds for European sovereign spreads. Watch closely against the data/Warsh backdrop.

5. Home Depot / Retail earnings — housing market proxy

Home Depot and Lowe's will reveal whether the US housing market is holding up under elevated mortgage rates. Any deterioration in home improvement spend signals consumer stress and adds weight to the "stagflation" scenario.

This Month's Top 5 — Events Structuring May 2026

1. Warsh's Fed policy reset — hawkish pivot risk

Warsh's first formal communications this month will define the 2026 rate path market narrative. A credible hawkish signal resets the entire yield curve and equity valuation framework. 45% rate hike probability today; this number will move materially in May.

2. US-Iran: war premium durability in oil

Whether the \$109 Brent level is sustained or escalates further is the central commodity story for May. A de-escalation (diplomatic breakthrough) would see Brent fall to \$90-95 rapidly, cutting inflation expectations and potentially reviving the cut narrative.

3. US-China tariff trajectory post-summit

The Trump-Xi summit ended without breakthrough. May will see whether the US reverts to tariff escalation or a quieter trade truce holds. European exporters, Chinese tech, and global supply chains are all exposed.

4. ECB June meeting — extended pause or forced action?

ECB is in "extended pause" mode. But Bund at 3.07% and oil at \$109 create an inflationary backdrop that makes a June cut nearly impossible. The question is whether the ECB talks hawkishly enough to prevent EUR/USD falling further toward 1.14.

5. European Bund yield trajectory — multi-decade levels

Germany's 10Y Bund at 3.07% is near its highest since 2011. A sustained move above 3.20% would challenge the valuation framework for European equities — particularly REITs, utilities, and infrastructure names. It also widened peripheral spreads (BTP-Bund) and tests Italian fiscal credibility.

15. Key Trends to Watch

1-Day Horizon — Today's Session Drivers

TREND	WATCH FOR	MARKET IMPACT
Ryanair FY2026 results	Revenue vs \$15.47bn; passenger traffic confirmation; fuel hedge commentary	Direct: RYA/RYAAY; Read-across: EZJ, WIZZ, LHA
Warsh Fed messaging	Any public statement, media interview, or official communication today	US 10Y yield direction; DXY; equities broadly
Oil price / Iran headlines	Any diplomatic or military developments in the Gulf	Brent, energy equities, tankers, airlines, inflation breakevens
European open tone	Gaps at open; volume confirmation; sector rotation (energy vs tech)	FTSE relative to DAX/CAC; risk appetite read

1-Week Horizon — Key Appointments & Themes

TREND	KEY DATE	MARKET STAKES
NVIDIA Q1 2026 earnings	Wed 20 May	AI capex demand confirmation or denial; tech sector direction for weeks
Walmart Q1 FY2027	Thu 21 May	US consumer health; tariff impact on margins; guidance revision risk
US 10Y yield — 4.75% test	Ongoing	A break higher = equity multiple compression, Bund widening, EUR/USD pressure
Iran/Hormuz situation	Fluid	Any binary escalation = oil spike, defense surge, airline/chemical selloff
Home Depot / Lowe's / Target	Tue–Wed	Housing market and consumer spending proxies under rate pressure

1-Month Horizon — Major Deadlines & Underlying Trends

TREND	TIMELINE	MARKET STAKES
Fed rate hike probability evolution under Warsh	May–June	Reprices equities, dollar, short-end Treasuries, EM carry trades
US-Iran military/diplomatic resolution	May–June	Oil de-rating (-\$15+) if resolved; spike if escalated. Energy sector binary.
ECB June meeting decision	June 4	Cut vs hold — will determine EUR/USD floor and European bank NIM outlook
US-China trade developments	Ongoing	Any tariff rollback = EM risk-on, copper, luxury, autos. Escalation = risk-off.
Bund yield at multi-year highs — European sovereign stress	Ongoing	BTP-Bund spread; Italian fiscal credibility; European bank capital ratios
