

Morning Briefing — Friday 10 July 2026

Generated 10 July 2026 • 07:00 BST (London) • Data collected between 06:00 and 07:15 BST • Reference timezone: Europe/London (BST = UTC+1)

2. IMPORTANT NEWS

US-Iran ceasefire collapses: CENTCOM strikes ~90 Iranian targets, Khamenei buried Friday morning

[Al Jazeera](#) / [CNN](#) • overnight into 10 July, ~06:00 BST

Trump declared the interim ceasefire "over" on 8 July. US strikes hit roughly 90 Iranian military targets; Iran retaliated with strikes toward a US-linked base in Jordan and drone attacks on sites in Kuwait, Qatar and Bahrain. Supreme Leader Khamenei's funeral concluded in the early hours of Friday. Pakistan and Qatar are mediating a return to talks. This is the dominant risk driver for the session: any de-escalation headline is bullish for risk assets and bearish for oil/gold; further escalation does the reverse.

Micron lifts US chip investment plan to over \$250bn, sparks overnight AI/semiconductor rally

[CNBC](#) / [Benzinga](#) / [Gurufocus](#) • announced 9 July, after US close

Micron raised its long-term US investment plan from \$200bn to over \$250bn through 2035, targeting ~40% of DRAM production onshore, and signed a 10-year supply deal with GlobalWafers. MU shares rose 4.5%. The announcement fuelled the overnight tech rally that lifted Nasdaq futures and Asian chip names (Kospi +2.6%), a tailwind for European semi-equipment names (ASML, ASMI, BESI) at the open.

SK Hynix prices \$28bn Nasdaq ADS offering at \$149, largest foreign listing on record, debut trading today

[CNBC](#) / [Gurufocus](#) • priced 9 July, trading begins 10 July

177.9m ADS priced at \$149 each; the book was covered roughly 7x. This is the largest first-share sale in history and a barometer for AI/memory-chip sentiment globally. A strong debut would reinforce the semiconductor risk-on trade already visible in Asia; a weak one would raise questions about froth in AI-linked names.

US equities closed higher Thursday despite the Iran escalation: S&P 500 +0.81%, Nasdaq +1.30%, Dow +0.27%

[CNBC](#) / [TheStreet](#) • close 9 July, US session

S&P 500 closed at 7,543.64, Nasdaq Composite at 26,206.89, Dow at 52,487.41 (+139pts). Chip stocks led on the Micron news and a pullback in oil prices offset war headlines. The resilience of US equities in the face of active Middle East conflict is itself a theme — markets are pricing the conflict as contained rather than systemic, for now.

Delta Air Lines reports Q2 earnings today, opening the US earnings season with a fuel-cost test

[Alphastreet](#) / [Zacks](#) / [Benzinga](#) • report and call before/at US open, 10 July

Consensus EPS around \$1.44-1.48 vs \$2.10 a year ago (~31% YoY), revenue seen up ~13% to \$18.7-18.9bn. American, United, JetBlue and Delta shares fell 3-5% this week as crude jumped on the Iran conflict; Delta is viewed as the most defensive major US carrier given its refinery hedge. Read-through for European carriers (IAG, Lufthansa, Air France-KLM) on fuel-cost guidance.

3. EUROPEAN FUTURES (PRE-OPEN)

CONTRACT	LEVEL	INDICATIVE MOVE	COLLECTION TIME
Euro Stoxx 50 futures (FESX)	6,326	Range 6,283-6,338 in session — direction n/a at collection time	~06:30 BST
DAX futures (FDAX)	n/a	Not reliably sourced this morning	—
CAC 40 futures (FCE)	n/a	Not reliably sourced this morning	—
FTSE 100 futures (Z)	n/a	Not reliably sourced this morning	—
US context — futures / overnight tone			
S&P 500 / Nasdaq futures	n/a	Tone positive — overnight Asia rally on Micron capex news	—

Opening bias leans constructive on the back of the Micron-led chip rally and a firm Thursday US close, but the session carries a binary geopolitical risk: the collapsed US-Iran ceasefire and overnight CENTCOM strikes could reverse sentiment quickly on any escalation headline out of the Gulf. Exact pre-open index-point levels for DAX, CAC 40 and FTSE 100 futures were not available via public sources at collection time; Euro Stoxx 50 futures traded in a 6,283-6,338 range around 06:30 BST.

4. YESTERDAY'S CLOSES — EUROPEAN INDICES (9 JULY 2026)

INDEX	CLOSE	CHANGE
Euro Stoxx 50	n/a (level)	+1.0% (STOXX 50)
STOXX 600 (pan-European)	640.88	+0.8%
DAX 40	25,118.27	+0.89% (+220.82 pts)
CAC 40	8,326.62	+0.90% (+73.96 pts)
FTSE 100	10,472.45	−0.16% (−16.59 pts)

European equities rebounded Thursday after three consecutive losing sessions, led by a tech rally (+2.7%) and basic resources (+3.2%) as investors bought the dip despite Middle East tensions. FTSE 100 was the laggard, dragged by AstraZeneca weakness offsetting broader optimism. The rebound was helped by a pullback in oil prices intraday, though that has since proven partly reversed by Friday's ceasefire collapse.

5. US MARKETS — YESTERDAY'S SESSION (9 JULY 2026)

INDEX	CLOSE	CHANGE	NOTE
S&P 500	7,543.64	+0.81%	—
Nasdaq Composite	26,206.89	+1.30%	Led by chip stocks post-Micron
Dow Jones Industrial Average	52,487.41	+0.27% (+139.02 pts)	—

Risk-on session despite active US-Iran hostilities: semiconductors rallied hard on Micron's \$250bn capex announcement, and a pullback in oil prices during the session helped broader sentiment. Leading sectors: semiconductors, mega-cap tech, communication services. Lagging sectors: energy (oil gave back gains intraday), airlines (fuel-cost concern ahead of the Delta print). Key takeaway: equity markets are for now treating the Iran conflict as a contained, tradeable risk rather than a systemic one — a stance that will be tested hard if Friday's ceasefire collapse escalates further over the weekend.

6. ASIAN MARKETS — OVERNIGHT SESSION (10 JULY 2026)

INDEX	LEVEL	CHANGE
Nikkei 225	n/a (exact level)	~+2%
Kospi (South Korea)	n/a (exact level)	+2.6%
Hang Seng	Prior close 24,030.18 (9 Jul)	Today's move n/a; MSCI Asia Pacific +0.5% overall
Shanghai Composite	Prior close ~4,037 (9 Jul)	Today's move n/a

Broad Asian rally overnight, led by a 2.6% surge in the Kospi as semiconductor, battery and steel names posted broad gains on Micron's capex announcement and SK Hynix's blockbuster Nasdaq debut. The MSCI Asia Pacific Index climbed 0.5%, though it remained on track for a weekly loss given earlier Iran-driven volatility. Hong Kong's Hang Seng had fallen 0.70% on Thursday on tech-listing volatility after a 3% rally the prior day; Shanghai gained 1.66% Thursday on local support. Exact Friday closing levels for Hang Seng, Shanghai and precise Nikkei/Kospi index points were not consistently available via public sources at collection time — treat the percentage moves above as the most reliable read.

7. COMMODITIES

COMMODITY	LEVEL	CHANGE	TIME
Brent (ICE, USD/bbl)	~74-77	Highly volatile intraday; fell toward \$77 Thu after dipping below \$73	as of 9 Jul close
WTI (NYMEX, USD/bbl)	~71.4-74.8 (range)	Volatile, tracking Brent	as of 9 Jul close
Gold (XAU/USD, USD/oz)	4,116	+0.94% intraday (prior close 4,077.52)	~07:00 BST
Natural gas (Henry Hub, USD/MMBtu)	~3.00	-0.27%	as of 10 Jul
Copper (COMEX, USD/lb)	~6.10-6.15 (as of 8 Jul)	Near two-week lows earlier in week	as of 8 Jul

Oil is the epicentre of the session's volatility: Brent has swung between the low-\$70s and mid-\$70s over the past 48 hours as the US-Iran ceasefire broke down, US strikes hit ~90 Iranian targets, and Iran attacked a Qatar-flagged tanker near the Strait of Hormuz. Strait transit remains roughly one-third of pre-war levels and war-risk insurance premiums have risen 2-3x. Gold has been equally volatile — it slid to a multi-week low near \$4,030 after Trump called the interim peace deal "over," then bounced back above \$4,100 on renewed safe-haven demand as strikes resumed. Copper is near two-week lows as rising energy costs hit the manufacturing outlook. Any further Hormuz disruption is the single largest upside risk to European headline inflation this quarter.

8. RATES & FX

INSTRUMENT	LEVEL	CHANGE	TIME
US Treasury 10Y	4.59%	Highest since mid-May	as of 9 Jul close
German Bund 10Y	n/a	Euro area 10Y proxy: 3.38% (7 Jul, +4bp)	as of 7 Jul
EUR/USD	~1.143-1.144	Defending trendline support near 1.1440	~07:00 BST
GBP/USD	~1.335	Rebounding from 1.3320 low	~07:00 BST
DXY (Dollar Index)	~100.9-101.0	Near 101, on track for weekly gain	~07:00 BST

The dollar is firm on safe-haven demand tied to the Iran escalation, keeping DXY near 101 and on track for a weekly gain. The US 10Y at 4.59% is at its highest since mid-May, reflecting both inflation risk from higher energy prices and a general repricing of term premium. Exact German Bund 10Y level was not reliably sourced this morning; the broader euro area 10Y yield stood at 3.38% as of 7 July. EUR/USD and GBP/USD are both holding key technical support levels into the London open, vulnerable to a break either way depending on the tone of Iran headlines through the session.

9. DCM — PRIMARY BOND MARKET

YESTERDAY'S ISSUANCES (9 JULY 2026)

ISSUER	CURRENCY	SIZE	MATURITY	COUPON/SPREAD	NOTES
--------	----------	------	----------	---------------	-------

No specific EUR/USD corporate, HY, SSA or financials print-level data was reliably sourced via public web search for 9 July 2026. IFR/GlobalCapital/Bloomberg terminal access required for deal-level detail (issuer, size, IPT-to-pricing move).

PIPELINE / EXPECTED TODAY

No specific mandated EUR deals for today were identified in public sources. Context: European government gross issuance is tracking toward ~€1.4tn for 2026, and euro IG corporate issuance is running at a record pace for the year, per market commentary (GlobalCapital, Amundi Research). Given the active Iran-driven volatility overnight, issuers are more likely to sit on the sidelines today and reassess Monday unless the geopolitical newsflow stabilises.

KEY SPREADS

INDEX	LEVEL (BP)	MOVE / DIRECTION
iTraxx Europe Main 5Y	n/a	—
iTraxx Europe Crossover 5Y	~315-320 (mid-May reference, stale)	No current print sourced
CDX IG 5Y (USD)	n/a	—
Avg euro corporate IG spread	n/a	Europe reported +1bp wider in recent weekly data (GlobalCapital)

Current-day iTraxx Main/Crossover and CDX IG levels were not obtainable via public web search this morning; these require Bloomberg Terminal, Markit/ICE or Refinitiv Eikon access for real-time confirmation.

COMMENTARY

The primary market window is likely to be choppy-to-shut for benchmark euro trades today given the overnight collapse of the US-Iran ceasefire and the resulting volatility in rates and oil. Issuers in industrials, transport and energy — the sectors we track most closely — are the ones most likely to pause new supply until the geopolitical picture stabilises, even as underlying 2026 euro IG issuance volumes remain on a record pace. Financials and SSA issuers with pre-existing mandates may still print opportunistically if Bund yields hold steady. Watch tanker/shipping-adjacent credits for any pipeline reaction to the renewed Hormuz risk premium.

10. ECONOMIC CALENDAR — TODAY (10 JULY 2026)

TIME (BST)	ZONE	INDICATOR	CONSENSUS	IMPORTANCE
15:00	US	Delta Air Lines Q2 2026 earnings call	EPS ~\$1.44-1.48 (cons.)	HIGH
n/a	Eurozone / UK	No high-importance EZ/UK releases reliably confirmed for today	n/a	MEDIUM

The economic calendar itself is light today; the session will instead be driven by Delta's earnings and Iran-conflict headlines. Looking just past today: FOMC June meeting minutes (the first under Fed Chair Kevin Warsh) are due for release this week, and Warsh's first Humphrey-Hawkins testimony before Congress is scheduled for 14 July (House) and 15 July (Senate). Bank earnings (JPMorgan, Bank of America, Citigroup, Wells Fargo, Goldman Sachs) kick off 14 July.

11. CORPORATE EVENTS & EARNINGS

COMPANY	MARKET	EVENT	TIME
Delta Air Lines (DAL)	NYSE, US	Q2 2026 earnings release + call	Pre-open / 10:00 ET (15:00 BST)
SK Hynix (SKHY)	Nasdaq, US	ADS debut — first day of trading, \$28bn raise	US cash open (14:30 BST)

Light European corporate calendar today; the market's attention is on Delta's earnings as the opening act of the Q2 season and on SK Hynix's Nasdaq debut as a sentiment gauge for the AI/memory trade. No large-cap European earnings were identified for today via public sources.

12. STOCKS TO WATCH

Delta Air Lines (DAL) — NYSE	Q2 earnings today; EPS consensus down ~31% YoY on fuel costs from the oil spike. Guidance on Q3 fuel assumptions is the key swing factor for the whole airline sector, including European carriers.	Volatile / binary
SK Hynix (SKHY) — Nasdaq	\$28bn ADS offering priced at \$149, ~7x oversubscribed, largest foreign listing ever. Debut trading today is a direct read on AI/memory sentiment.	Bullish debut
ASML / ASM International (Amsterdam)	Direct beneficiaries of the Micron \$250bn capex plan and the broader memory/AI capex supercycle narrative reinforced by SK Hynix's listing.	Bullish
Frontline and other Suezmax/VLCC tanker names	Hormuz-linked tanker earnings above \$340k/day (8 Jul), up \$50k on the week. Frontline +81.6% YTD on route-lengthening and Q1 EPS beat (\$2.51 vs \$1.58 est). Renewed ceasefire collapse extends the trade but raises headline volatility risk.	Bullish, high volatility
IAG / Lufthansa / Air France-KLM (Europe)	Fuel-cost read-through from US peers (American -5%, United -4%, Delta/JetBlue -3% this week on the oil spike) applies directly to European carriers ahead of their own Q2 prints.	Bearish, fuel cost pressure
European defence names (RENK, Leonardo, Rheinmetall)	US iShares Aerospace & Defense ETF on its longest win streak since February, hitting a fresh intraday high, as the Iran conflict reinforces multi-year defence demand visibility.	Bullish
AstraZeneca (AZN) — FTSE 100	Named as the specific drag behind FTSE 100's underperformance versus DAX/CAC on 9 July; watch for continuation or reversal at the open.	Bearish momentum
Gold miners (Fresnillo, Polymetal-adjacent, Newmont/Barrick for read-through)	XAU/USD swung from ~\$4,030 (post "peace deal over" comment) back above \$4,100 on renewed strikes — a highly volatile session for the sector on safe-haven flow reversals.	High volatility, watch flows
Micron (MU) — Nasdaq, for European semi-equipment read-through	+4.5% on 9 July after raising its US capex plan to \$250bn; sets the tone for chip-adjacent European names into the open.	Bullish

13. MACRO / CORPORATE / POLITICAL HIGHLIGHTS

MACRO

US 10Y at a two-month high (4.59%): Reflects both energy-driven inflation risk from the Iran conflict and a broader repricing of duration ahead of Fed Chair Warsh's first Humphrey-Hawkins testimony (14-15 July).

FOMC June minutes due this week: First set of minutes under Chair Warsh — markets will parse for early signals on his policy leanings, including stablecoin/CBDC commentary expected in the July testimony.

Euro area 10Y yield at 3.38% (7 Jul, +4bp): Government gross issuance for 2026 tracking toward ~€1.4tn, a meaningful step-up in refinancing needs against a steeper curve.

CORPORATE

Micron's \$250bn US capex plan: Raised from \$200bn, targeting 40% domestic DRAM production; triggered the overnight Asia semiconductor rally and a positive read-through for European chip-equipment names.

SK Hynix's record Nasdaq listing: \$28bn raised, ~7x oversubscribed — the largest foreign IPO ever, a direct gauge of AI/memory investor appetite as trading begins today.

Delta opens US earnings season: Q2 print today sets the tone for the airline sector and, on 14 July, hands off to bank earnings (JPMorgan, BofA, Citi, Wells Fargo, Goldman Sachs).

POLITICAL / GEOPOLITICAL

US-Iran ceasefire collapse: Trump declared the interim deal "over" on 8 July; CENTCOM has since struck ~90 Iranian targets, and Iran has retaliated against US-linked positions in Jordan, Kuwait, Qatar and Bahrain. This is the single largest swing factor for today's session.

Strait of Hormuz still largely disrupted: Commercial transit remains roughly one-third of pre-war levels; war-risk insurance premiums have risen two- to threefold since the conflict began in late February.

Mediation efforts continue: Pakistan and Qatar are reportedly working to bring Washington and Tehran back to the table despite the renewed strikes — any confirmed talks would be a strong de-escalation signal for risk assets.

14. KEY THEMES — TOP 5 BY HORIZON

TODAY'S TOP 5

1. US-Iran ceasefire collapse

Renewed CENTCOM strikes and Iranian retaliation create binary risk for oil, gold and safe-haven FX through the session.

2. Delta Q2 earnings

Fuel-cost guidance is the key read-through for the entire airline sector, Europe included.

3. SK Hynix Nasdaq debut

Largest foreign IPO ever; a live gauge of how much froth is left in the AI/memory trade.

4. Oil price whipsaw

Brent swinging between low-\$70s and mid-\$70s on Hormuz risk; a sustained break higher pressures European inflation and airline/consumer names.

5. Gold volatility

XAU/USD swung from ~\$4,030 to above \$4,100 in 48 hours on shifting safe-haven flows — a live proxy for war-risk sentiment.

THIS WEEK'S TOP 5

1. Warsh's first Humphrey-Hawkins testimony (14-15 Jul)

First major policy signal from the new Fed chair, including stance on stablecoins/CBDCs.

2. Bank earnings kickoff (14 Jul)

JPMorgan, BofA, Citi, Wells Fargo and Goldman all report; loan growth and credit quality signal the broader economy's health.

3. FOMC June minutes

First minutes under Chair Warsh — markets will parse for dovish/hawkish tilt.

4. Iran ceasefire negotiation attempts

Pakistan/Qatar mediation efforts could reverse this week's risk tone quickly if talks resume.

5. AI capex follow-through

Positioning into bank earnings will test whether the Micron/SK Hynix-driven rally has legs or fades.

THIS MONTH'S TOP 5

1. Q2 earnings season

Banks, airlines and mega-cap tech report through July; fuel costs and AI capex are the dominant cross-currents.

2. Iran conflict trajectory

Escalation vs. negotiated de-escalation determines whether the oil price regime resets structurally higher.

3. Fed policy path under Warsh

July testimony and subsequent commentary will set the rate-path narrative for H2 2026.

4. AI/memory capex supercycle

Micron's \$250bn plan and SK Hynix's listing mark a new leg in the cycle; watch for follow-on announcements from peers.

5. European primary bond market pace

2026 EUR IG issuance is running at a record pace; war-driven rate volatility is the main risk to that pace continuing.

15. KEY TRENDS TO WATCH

1 DAY

Iran headlines: Any confirmed talks or further strikes will move oil, gold and safe-haven FX sharply intraday.

Delta earnings: Fuel-cost guidance sets the tone for airline stocks into the European open.

SK Hynix debut: First-day trading action is a live sentiment read on the AI/memory trade.

1 WEEK

Warsh testimony (14-15 Jul): First major policy communication from the new Fed chair.

Bank earnings (14 Jul): JPMorgan, BofA, Citi, Wells Fargo, Goldman Sachs report before the US open.

Iran mediation: Pakistan/Qatar efforts to restart talks are the key de-escalation watch item.

1 MONTH

Q2 earnings season: Broad read across banks, airlines and tech on cost pressures and AI capex.

Fed rate path: Warsh's tone through July testimony and subsequent minutes shapes H2 2026 expectations.

Oil price regime: Whether Hormuz disruption becomes structural or resolves determines the inflation/rates backdrop into autumn.
