

Morning Briefing

WEEKEND
EDITION

Saturday, 30 May 2026 | Generated: 07:00 BST | London Timezone

Next trading day: Monday, 1 June 2026 | Data collected: 06:30–07:00 BST, 30 May 2026

2. IMPORTANT NEWS

US-Iran 60-day ceasefire MOU reached; Strait of Hormuz reopening on the table — awaiting Trump approval

CNBC / Washington Post — 28 May 2026

US and Iranian negotiators agreed a 60-day MOU on 28 May to extend the ceasefire, reopen the Strait of Hormuz, lift some US restrictions, and start nuclear talks. Trump has not yet formally approved. Markets have already priced most of this: Brent -19% in May. Rejection by Trump would be a sharp reversal catalyst.

Dell Technologies surges 33% — best single day on record — after Q1 revenue +88% and AI server sales +757%

CNBC / Motley Fool — 29 May 2026

Dell Q1 FY2027: revenue \$43.8B (+88% YoY), AI server revenue \$16.1B (+757% YoY), AI order backlog \$51.3B. FY27 guidance raised to \$165–169B revenue (+47%) and EPS \$17.90 (+74%). Shares +234% YTD. Validates the structural AI infrastructure capex thesis.

S&P 500 posts ninth consecutive weekly gain, closes at new record 7,563.63 — longest streak since 2023

Yahoo Finance / TheStreet — 29 May 2026

Tech and healthcare led. Dow at 50,668.97. Iran ceasefire optimism and AI earnings enthusiasm drove the week. PCE at 3.8% failed to derail equities, signalling strong risk appetite even in a higher-for-longer rate environment.

April PCE headline at 3.8% YoY — highest since May 2023 — core at 3.3%; Fed June hold now consensus

CNBC / Fox Business — 28 May 2026

Headline PCE +3.8% YoY (+0.4% MoM); core +3.3% YoY (+0.2% MoM). MoM readings slightly cooler than feared. No rate cut before Q4 2026 at earliest. If Iran ceasefire holds, energy-driven inflation should mechanically ease in May and June CPI prints.

Brent crude posts biggest monthly loss since COVID (-19% in May) — closes at \$93.71 on Hormuz optimism

CNBC — 29 May 2026

Oil remains ~30% above pre-Iran-war levels. Ceasefire MOU has already priced in Hormuz reopening. Further downside to \$85–88 if Trump approves; sharp reversal toward \$110 if he rejects. The dominant commodity variable for next week.

3. EUROPEAN FUTURES (PRE-OPEN)

Weekend edition — futures are indicative only. European markets reopen Monday 1 June 2026.

INDEX	FUTURES LEVEL	VS FRIDAY CLOSE	NOTE
Euro Stoxx 50	~6,073	+0.1%	Indicative; Friday close 6,065
DAX	n/a	—	Not retrieved this session
CAC 40	n/a	—	Not retrieved this session
FTSE 100	n/a	—	Not retrieved this session
S&P 500 Futures	n/a	—	Context: Friday close 7,563.63
Nasdaq Futures	n/a	—	Context: Friday close 26,917.47

Data collected ~06:30 BST. DAX/CAC/FTSE pre-open levels unavailable at generation time — verify via Bloomberg or Eurex before Monday open.

4. YESTERDAY'S CLOSES — FRIDAY 29 MAY 2026

INDEX	CLOSE	CHANGE (PTS)	% CHANGE
Euro Stoxx 50	6,065	~+18	+0.30%
DAX	n/a	—	—
CAC 40	n/a	—	—
FTSE 100	n/a	—	—

DAX, CAC 40, FTSE 100 closing levels not retrieved. Verify via Bloomberg, Reuters or exchange sites before Monday open.

5. US MARKETS — FRIDAY 29 MAY 2026

INDEX	CLOSE	CHANGE (PTS)	% CHANGE	NOTE
S&P 500	7,563.63	+43.27	+0.57%	New record; 9th weekly gain in a row
Dow Jones	50,668.97	+24.69	+0.05%	Above 50,000; record close
Nasdaq	26,917.47	+242.74	+0.91%	Tech-led; Dell +33% biggest driver

Tone: Positive. Tech and healthcare led; energy lagged. Dell's 33% surge on AI server results was the session catalyst. Iran ceasefire MOU news supported risk appetite while partially tempering energy stocks.

Leading sectors: Technology (Dell +33%, AI supply chain), Healthcare (defensive buying)

Lagging sectors: Energy (oil fell on Hormuz reopening pricing)

Key takeaway: S&P 500's ninth straight weekly gain is the longest winning streak since 2023. AI capex validation (Dell: AI revenue +757%, backlog \$51.3B) sustains the rally. PCE at 3.8% limits rate-cut hope but did not derail equities — resilience signal.

6. ASIAN MARKETS — FRIDAY 29 MAY 2026 SESSION

INDEX	CLOSE	% CHANGE	DRIVER
Nikkei 225	66,329	+2.53%	US tech rally; Iran ceasefire optimism; yen exporters
Hang Seng	25,006	-1.30%	Domestic headwinds; divergent Iran risk reading
Shanghai Composite	4,058.47	-0.98%	Domestic deleveraging concerns
KOSPI	n/a	—	Not retrieved

Tone: Mixed. Japan surged strongly on US tech euphoria and ceasefire-driven risk appetite — yen-sensitive exporters led. China and Hong Kong fell amid domestic deleveraging pressures and a different sensitivity to Middle East risk. Asia overall shrugged off inflation concerns in favour of ceasefire optimism and US AI earnings momentum.

7. COMMODITIES

COMMODITY	LEVEL	DAY CHANGE	MTD	COMMENT
Brent Crude	\$93.71/bbl	-\$0.58 (-0.6%)	-19%	Biggest monthly loss since COVID. Iran ceasefire MOU has priced in Hormuz reopening. Still ~30% above pre-war level.
WTI Crude	<\$88/bbl (~\$87.80)	n/a	Sharp monthly loss	Fell below \$88. Same ceasefire-driven dynamics as Brent. On track for large monthly decline.
Gold	\$4,580/oz	+2nd session gain	-0.8% MTD	Two-session rally. Slight monthly loss as higher-for-longer rates and ceasefire temper safe-haven demand.
Natural Gas	n/a	—	—	Data not retrieved this session
Copper	~\$6.23/lb	From \$6.40 weekly high	—	Fell below \$6.25. Cautious optimism on Persian Gulf trade normalisation. \$6.25 is key support.

8. RATES & FX

INSTRUMENT	LEVEL	CHANGE	NOTE
US 10Y Treasury	4.44%	Eased	Iran ceasefire eased inflation fears; PCE MoM slightly cooler than expected
German 10Y Bund	2.96%	—	May 29 close. ECB on hold at 2.00% since April 30.
EUR/USD	~1.1630 *	-0.3% *	* As of 15 May only — verify current rate
GBP/USD	~1.3345 *	-0.4% *	* As of 15 May only — verify current rate
DXY (Dollar Index)	n/a	—	Not retrieved this session

* EUR/USD and GBP/USD figures are from 15 May data only. Current spot rates not confirmed. Do not use for trading without verification.

9. DCM — PRIMARY BOND MARKET

YESTERDAY'S ISSUANCES — FRI 29 MAY

No specific deals retrieved for Friday 29 May. Late-week European primary market is typically light. Corporate IG, HY, SSA and financial issuances for the day not confirmed from available sources. *n/a*

PIPELINE / EXPECTED THIS WEEK (W/C 1 JUNE)

Specific mandates not available (GlobalCapital/IFR paywalled). European issuers expected to accelerate issuance early in the week ahead of the summer primary market slowdown. IG financials, SSA and investment-grade industrials most likely. Window quality will depend on Iran deal news flow and Monday's spread opening. *Mandates: n/a*

KEY SPREADS

SPREAD	LEVEL	CHANGE	DIRECTION
iTraxx Main (5Y)	<i>n/a</i>	—	—
iTraxx Crossover (5Y)	<i>n/a</i>	—	—
CDX IG (North America)	<i>n/a</i>	—	—
Avg Euro Corporate IG	<i>n/a</i>	—	—

iTraxx/CDX levels not retrieved this session. Verify via Bloomberg CDSW or Markit before Monday open.

COMMENTARY

European primary bond market has been running at record issuance volumes throughout May, underpinned by ECB on hold and persistent investor demand for yield. The Iran ceasefire MOU, once formally approved by Trump, would likely compress credit spreads further — particularly for energy-adjacent issuers and transport names sensitive to Hormuz flows. The window remains open. The week of June 1–5 is expected to be active across IG, financials and SSA before summer shutters come down. Investor appetite for credit has been supported by the disinflation narrative: if PCE begins to cool from June onwards, duration could also rally, providing a tailwind for fixed-rate issuance.

10. ECONOMIC CALENDAR — WEEK OF 1–6 JUNE 2026

Saturday 30 May — no market data releases. Calendar below covers the upcoming trading week.

DATE	LONDON TIME	INDICATOR	CONSENSUS	IMPORTANCE
Mon 1 Jun	09:00	Eurozone Manufacturing PMI — Final (May)	<i>TBC</i>	MEDIUM
Mon 1 Jun	09:30	UK Manufacturing PMI — Final (May)	<i>TBC</i>	MEDIUM
Mon 1 Jun	15:00	US ISM Manufacturing PMI (May)	<i>TBC</i>	HIGH
Tue 2 Jun	10:00	Eurozone Unemployment Rate (Apr)	<i>TBC</i>	MEDIUM
Wed 4 Jun	09:30	Eurozone Services PMI — Final (May)	<i>TBC</i>	MEDIUM
Wed 4 Jun	13:15	US ADP Employment Change (May)	<i>TBC</i>	HIGH
Thu 5 Jun	10:00	Eurozone Flash CPI Estimate (May)	<i>TBC</i>	HIGH
Fri 6 Jun	13:30	US Non-Farm Payrolls (May)	<i>TBC</i>	HIGH
Fri 6 Jun	13:30	US Unemployment Rate (May)	<i>TBC</i>	HIGH

Consensus figures marked TBC — confirm via Reuters Eikon, Bloomberg or Investing.com. Times indicative; verify for BST.

11. CORPORATE EVENTS & EARNINGS

Today (Sat 30 May): No scheduled earnings or corporate events. Markets closed (weekend).

Dell Technologies (DELL)

Reported Q1 FY2027 after-hours on Thursday 29 May. Post-earnings reaction +33% on Friday — stock's best day on record. AI server backlog \$51.3B; FY27 revenue guidance \$165–169B. Next update: analyst day TBD.

SpaceX (private)

IPO timeline reportedly accelerating as of 27 May (Kraken blog). No confirmed date or filing. Would be among the largest US tech IPOs in history if it proceeds in 2026.

Upcoming week (June 1–5): Q1 2026 European earnings season largely complete. No major confirmed earnings for w/c June 1 retrieved. Verify via MarketScreener or FactSet for any late reporters.

12. STOCKS TO WATCH — MONDAY 1 JUNE 2026 OPEN

COMPANY / TICKER	SECTOR	REASON	DIRECTION
Dell (DELL)	Technology	Best day ever +33% on AI server blowout. Backlog \$51.3B, guidance raised, shares +234% YTD. Momentum vs. profit-taking tension after a single-day surge of this magnitude.	UP / VOLATILE
Shell (SHEL.L) / BP (BP.L)	Energy	Brent -19% in May. Trump Iran MOU decision is the key binary. Approval = further oil decline, sector pressure. Rejection = sharp reversal. Dominant sector risk Monday.	BINARY
Maersk (MAERSK-B.CO)	Shipping	Strait of Hormuz reopening is the direct catalyst. Container routing normalisation and freight rate direction tied to Trump's Iran decision. Upside on ceasefire confirmation.	UP if MOU approved
Ryanair (RYA.L) / IAG (IAG.L)	Aviation	Oil -19% in May translates directly to lower jet fuel costs. European aviation margin expansion thesis re-activated if Brent holds below \$95. Most direct beneficiaries of sustained ceasefire.	UP
Rheinmetall (RHM.DE) / BAE Systems (BA..L)	Aerospace & Defense	Defense names face positioning unwind risk if Iran ceasefire holds and geopolitical risk premium deflates. YTD gains are substantial across European defense. Profit-taking pressure likely.	DOWN / WATCH
Agnico Eagle (AEM)	Metals & Mining (Gold)	Gold at \$4,580/oz; second consecutive session gain. Central bank buying and inflation hedge demand persist. PCE at 3.8% supports the gold-as-inflation-hedge narrative.	UP
Antofagasta (ANTO.L) / Freeport (FCX)	Metals & Mining (Copper)	Copper below \$6.25/lb key support from \$6.40 weekly high. Cautious on Gulf trade flow outlook. Persian Gulf reopening marginally positive for copper logistics and demand sentiment.	WATCH \$6.25
TotalEnergies (TTE.PA)	Energy	Most exposed European oil major to Hormuz LNG and crude flows. Monday direction almost entirely dependent on Trump's Iran MOU decision. High binary risk.	BINARY

13. MACRO / CORPORATE / POLITICAL HIGHLIGHTS

MACRO

1. **PCE April 2026:** Headline +3.8% YoY (highest since May 2023), core +3.3% YoY. MoM readings (headline +0.4%, core +0.2%) slightly cooler than feared. Fed on hold; June 16–17 FOMC hold is consensus. No cut before Q4 2026 at earliest.
2. **ECB hold:** Rate held at 2.00% for the seventh consecutive meeting on 30 April. ECB cited Iran war impact on European growth and energy costs. No timeline for resuming cuts given inflation uncertainty.
3. **Oil disinflation signal:** Brent -19% in May. If ceasefire holds, energy component of CPI should mechanically ease from June prints. Potentially the most significant disinflationary development of 2026.
4. **Consumer expectations:** Jumped +2.5pp since Iran conflict began (~90 days ago). Reversal expected if ceasefire holds — additional disinflationary and consumption-supportive impulse.

CORPORATE

1. **Dell Q1 FY2027:** Revenue \$43.8B (+88%), AI server revenue \$16.1B (+757%), AI order backlog \$51.3B. FY27 guidance: \$165–169B revenue (+47%), EPS \$17.90 (+74%). Shares +234% YTD. Structural AI infrastructure capex thesis fully validated.
2. **SpaceX IPO:** Timeline reportedly accelerating per 27 May reports. No confirmed date. Would rank among the largest US tech listings in history.
3. **Robinhood (HOOD):** Mizuho raised PT to \$115 from \$110, citing AI trading tools. Represents 36% upside. Signals continued analyst enthusiasm for retail fintech with AI integration.

POLITICAL / GEOPOLITICAL

1. **US-Iran MOU (28 May):** Negotiators agreed a 60-day MOU: ceasefire extension, Strait of Hormuz reopening, some US sanction relief, nuclear talks. Trump approval pending. Weekend statement expected. Most consequential near-term geopolitical catalyst.
2. **Oil risk asymmetry:** Markets have priced most of the peace dividend (Brent -19% in May, still ~30% above pre-war). Approval extends decline to \$85–88; rejection sends Brent sharply higher, potentially \$110+.
3. **Iran war macro impact:** The conflict (started late February 2026) added ~30% to oil at peak and pushed headline PCE from ~2.5% to 3.8%. A durable ceasefire would be the single largest macro pivot of 2026, reversing energy-driven inflation across the US and Eurozone simultaneously.

14. KEY THEMES — TOP 5 BY HORIZON

| TODAY'S TOP 5 (MONDAY 1 JUNE OPEN)

1. Trump-Iran MOU Decision

The dominant binary. Approval extends oil decline to \$85–88, compresses credit spreads, sustains equity rally. Rejection reverses all of May's oil move — \$110+ back in play and equity risk-off.

2. Post-Dell AI Momentum

Dell's +33% session confirms AI capex as structural. European AI-adjacent names (ASML, STMicroelectronics, Infineon) and US tech futures will signal Monday's continuation or reversal.

3. European Futures Open After Weekend

Euro Stoxx 50 at ~6,073 indicative (+0.1%). Friday's US record close (+0.57%) is a tailwind. Iran news flow and PMI data at open will set direction for the session.

4. Eurozone Manufacturing PMI Final (09:00 BST)

Expected below 50 (contraction). Any upside surprise supports EUR and European equities. A miss deepens the industrial weakness narrative and weighs on EUR/USD.

5. Month-End / Quarter-Start Rebalancing

June 1 is the first day of Q2 for some fund calendars. Portfolio rebalancing flows at record equity highs may amplify early moves and create intraday volatility.

| THIS WEEK'S TOP 5 (1–6 JUNE)

1. US Non-Farm Payrolls — Fri 6 Jun

The defining near-term Fed input. Strong print (>200K) with low unemployment kills 2026 cut expectations; a weak print reopens the policy debate and could trigger a rates rally.

2. Eurozone Flash CPI May — Thu 5 Jun

First May inflation read for Europe. Oil decline should mechanically reduce headline. If core stays sticky, ECB holds longer; if core falls too, EUR rates could rally and compress spreads.

3. US ISM Manufacturing — Mon 1 Jun

Industrial health check under tariff regime. Below 50 adds to growth-risk narrative ahead of June FOMC and may weigh on USD/support Treasuries.

4. Iran MOU Formal Confirmation

Any Trump statement this week moves oil $\pm 5\%$ and equities $\pm 1\%$. This is the dominant macro variable for the entire week.

5. European DCM Pipeline Activation

Issuers expected to hit market heavily in early June before summer. Demand quality and IPT-to-pricing tightening will indicate investor appetite at current spread levels.

| THIS MONTH'S TOP 5 (JUNE 2026)

1. FOMC Meeting — 16–17 June

Rate hold consensus with PCE at 3.8%. The dot plot and Powell presser define whether the Fed signals any 2026 cuts. Material for all asset classes including EUR/USD and credit.

2. Inflation Trajectory — CPI/PCE through June

Energy component should ease mechanically in May and June prints. Core stickiness is the swing factor. If core falls meaningfully, the rate-cut path reopens faster than expected.

3. Iran 60-Day Ceasefire Window

If approved, formal nuclear talks begin. Progress sets oil's path through Q3. A breakdown sends Brent back toward \$110. This is the single biggest macro variable for June.

4. AI Capex Cycle Q2 Validation

Dell's blowout set the bar. AMD, Nvidia supply chain, and cloud hyperscaler capex commentary through June will confirm or challenge the AI demand thesis underpinning the equity rally.

5. European Primary Market Summer Close

DCM window shuts by late June. Compressed issuance timeline creates supply risk — potential indigestion if volumes overwhelm demand. Window quality sets H2 borrowing conditions.

15. KEY TRENDS TO WATCH

1 DAY — MONDAY 1 JUNE

Iran binary: Trump approval/rejection of MOU is the single dominant driver. Oil $\pm 5\%$, energy sector $\pm 3\%$, equities $\pm 1\%+$ depending on outcome. Weekend news flow is critical.

Dell/AI momentum: Will $+33\%$ single-session surge carry into European tech open? ASML, STMicro, Infineon likely to reflect AI capex enthusiasm. Profit-taking risk in US tech after a historic run.

European open: Euro Stoxx 50 indicative $\sim 6,073$ ($+0.1\%$). PMI data at 09:00 BST and Iran news flow will determine direction by mid-morning.

Credit spreads: Watch for any spread movement at European open — Iran ceasefire tightening vs. month-end supply risk widening is the tension in credit markets Monday.

1 WEEK — 1–6 JUNE

US Non-Farm Payrolls (Fri): Labor market resilience is the key input for Fed timing. Strong print delays any cut; weak print reopens the 2026 rate-cut debate.

Eurozone Flash CPI (Thu): Oil decline should reduce headline. Core inflation persistence is the key watch — ECB's reaction function depends on where core settles.

DCM volume and spread quality: June 1–6 issuance pace and bid-to-cover ratios will reveal whether the primary market window is truly open or only superficially active.

Iran deal confirmation: Dominant macro overhang for the entire week. Any formal Trump statement is an immediate catalyst across oil, equities and credit.

1 MONTH — JUNE 2026

FOMC 16–17 June: Hold consensus, but Powell presser on forward guidance will set Q3 narrative for rates, USD and equity multiples. Key risk is a hawkish hold that extends the sell-off in rate-sensitive assets.

Iran ceasefire stability: 60-day window, if approved, sets oil's trajectory through Q3. Sustained ceasefire = Brent $\$85$ – $\$88$, continued disinflation. Collapse = $\$110+$ and macro reversal.

AI capex cycle: Dell blowout is the bellwether. Chip names, data centre REITs, power infrastructure stocks, and cloud hyperscalers are all priced for acceleration. Any demand disappointment in June would have systemic equity implications.

European summer DCM close: Issuers have until approximately late June to fund. Compressed window creates potential for supply indigestion — quality of demand for first two weeks of June is the critical variable.
