

Morning Briefing – Saturday 6 June 2026

Generated: 06:00 London BST (UTC+1) | Next European open: Monday 9 June 2026 | Data collected: 05:30–06:00 BST

⚠ Saturday edition. European and US cash markets closed. No pre-open futures quotes available. Data below reflects Friday 5 June closes. Monday 9 June direction section provided.

| 2. IMPORTANT NEWS

Semiconductor selloff wipes ~\$1.3 trillion from global markets – Nasdaq falls 4.2%

[TheStreet](#) / [Yahoo Finance](#) / [CNBC](#) – 5 June 2026

Broadcom guidance missed analyst estimates for Q3 AI chip revenue (~\$16bn vs. ~\$17.2bn expected). Triggered coordinated unwind of the “Parabolic 7” basket (Marvell, Micron, SanDisk, Intel, AMD, Broadcom, Dell). Philadelphia Semiconductor Index (SOX) fell 10.3%, its worst single day since March 2020. Contagion reached European semis: Infineon -4.9%, ASML -3.2%, STMicro -3.2% at European close.

US May non-farm payrolls: +172,000 vs. forecast ~130,000 – labour market tighter than expected

[US Bureau of Labor Statistics](#) / [Reuters](#) – 5 June 2026

Beat adds pressure on the Fed to delay or cancel anticipated rate cuts. US 10-year Treasury yield pushed above 4.50%. Equity markets sold off further on the news; strong jobs data seen as inflationary given energy-driven price backdrop.

ECB June rate hike becoming less certain as oil fails to spike as feared

[Bloomberg](#) – 14 May 2026

Bloomberg survey earlier in May had flagged two ECB rate hikes for 2026; by mid-May the June move was in doubt. Eurozone economy stagnating, inflation spillover from energy costs limited so far. Decision expected at 12 June ECB meeting. Markets now pricing a coin-flip for June.

Middle East: Israel-Lebanon ceasefire talks progressing; US-Iran nuclear negotiations ongoing

[Reuters](#) / [CNBC](#) – 5 June 2026

Ceasefire hopes drove Brent crude off recent highs, down ~3% on Thursday, below \$95/bbl. DXY slipped to 99.2. Any breakdown in talks or escalation could spike oil and reprice risk assets sharply. Iran deal remains a major variable for energy markets.

SpaceX IPO expected in June 2026 – defense and space sector interest surging

[CNBC](#) / [Investing.com](#) – June 2026

Historic interest in SpaceX listing fueling the entire space/defense sector. Applied Aerospace & Defense (AADX) priced its IPO June 2 at \$68/share on NYSE, raising \$1.68bn. Defense budget ramp-ups globally generating strong M&A and deal flow in the sector.

3. EUROPEAN FUTURES – PRE-OPEN

Saturday: European cash markets closed. Futures volumes minimal. Data below reflects last quoted levels; direction into Monday 9 June driven by Friday's sharp US and Asian selloff.

CONTRACT	LAST QUOTED LEVEL	LAST MOVE	MONDAY DIRECTION SIGNAL
Euro Stoxx 50 (FESX)	<i>n/a (Saturday)</i>	-0.6% (Fri close)	Negative. Semi/tech contagion from US session.
DAX (FDAX)	<i>n/a (Saturday)</i>	-0.89% (Fri close)	Negative. Infineon, SAP, ASML drag expected.
CAC 40 (FCE)	<i>n/a (Saturday)</i>	-0.92% (Fri close)	Negative. ST Micro, Schneider Electric under pressure.
FTSE 100 (Z)	<i>n/a (Saturday)</i>	-0.38% (Fri close)	Mildly negative. Energy/commodity names may provide partial buffer.
S&P 500 (ES)	<i>n/a (Saturday)</i>	-2.6% (Fri close)	Sharply negative. First losing week in 10.
Nasdaq 100 (NQ)	<i>n/a (Saturday)</i>	-4.2% (Fri close)	Strongly negative. Semi unwind not yet exhausted.

4. YESTERDAY'S CLOSES – EUROPEAN INDICES (Friday 5 June 2026)

INDEX	CLOSING LEVEL	CHANGE (%)	NOTE
Euro Stoxx 50	<i>n/a (verify Bloomberg)</i>	-0.60%	Tech/semi drag; STOXX 600 -0.30%
DAX	<i>n/a (verify Bloomberg)</i>	-0.89%	Infineon -4.9% led declines
CAC 40	<i>n/a (verify Bloomberg)</i>	-0.92%	ST Micro -3.2%, Schneider -1.9%
FTSE 100	<i>n/a (verify Bloomberg)</i>	-0.38%	Outperformed; energy names provided support

Sources: CNBC, Euronews, MarketScreener – 5 June 2026. Absolute index levels not confirmed; verify on Reuters/Bloomberg before use.

5. US MARKETS – YESTERDAY’S SESSION (Friday 5 June 2026)

INDEX	CLOSE	CHANGE (PTS)	CHANGE (%)
S&P 500	~7,409 (est.)	~-200 pts	-2.60%
Dow Jones	50,941	-621 pts	-1.20%
Nasdaq Composite	n/a (verify)	n/a	-4.20%

SESSION TONE

Risk-off, driven by two simultaneous shocks: Broadcom’s below-consensus AI chip guidance and the May payrolls beat (+172,000 vs. ~130,000 expected). The double hit repriced both earnings expectations for the AI trade and the rate path simultaneously.

SECTOR LEADERSHIP

LAGGARDS: Technology (-5.2% est.), Semiconductors (SOX -10.3%), Consumer Discretionary. Marvell -8%, Micron -13%+, AMD -8%, Intel -8-11%, Broadcom -3.8%, Nvidia significant losses. The “Parabolic 7” basket unwound heavily.

RELATIVE OUTPERFORMERS: Energy, Utilities, Financials (modest gains/flat). Strong jobs data and higher yields supported banks. Oil names cushioned by geopolitical bid.

KEY TAKEAWAY

The S&P 500 ended its 10-week consecutive winning streak. The AI/semiconductor trade that drove markets to record highs (S&P above 7,600 as recently as June 2) is under serious technical pressure. The Philadelphia Semiconductor Index (SOX) is at its worst single-session decline since March 2020. Watch for follow-through selling Monday or a technical bounce attempt.

6. ASIAN MARKETS – OVERNIGHT SESSION (Friday 5 June 2026)

INDEX	CLOSE	CHANGE (%)	COMMENT
Nikkei 225	66,588.12	-1.31%	Semiconductor names led decline; SoftBank, Tokyo Electron under pressure
Hang Seng	24,948.96	-1.20%	Tech and AI-related names dragged; defensive sectors limited losses
Shanghai Composite	4,045.45	-0.30%	Relative outperformer; domestic policy support cushioned the selloff
Kospi	8,160.59	-5.54%	Worst performer in region; Samsung, SK Hynix crushed by semi selloff
ASX 200 (Australia)	8,625.10	-0.70%	Miners and energy outperformed; tech underperformed

Overall tone: Sharply negative. South Korea bore the brunt as Samsung and SK Hynix are direct proxies for the global memory chip cycle. Kospi -5.54% is the standout. Shanghai's relative resilience reflects its lower AI/tech weighting and continued domestic stimulus narrative. Australia's commodity exposure provided a partial buffer. Heading into Monday, Asian markets will key off any weekend commentary from Broadcom or major semiconductor names.

7. COMMODITIES (as of Friday 5 June 2026 close)

COMMODITY	LEVEL	CHANGE	NOTE
Brent Crude (\$/bbl)	~\$95.00	-3.0% (Thu-Fri)	Israel-Lebanon ceasefire talks easing supply fear premium
WTI Crude (\$/bbl)	~\$91.00	-3.1% (Thu-Fri)	US-Iran negotiations progressing; demand concern from rate hike risk
Gold (\$/oz)	\$4,366.00	-4.0% (week)	Lowest since March 2026. Strong USD + rising yields undermined safe-haven bid
Natural Gas (\$/MMBtu)	\$2.89	n/a (day chg)	Elevated vs. prior year; Middle East supply risk premium persists
Copper (\$/lb)	~\$6.40	Declining	Retreating from record highs. Monetary tightening expectations weigh on demand outlook

Notable: Gold's 4% weekly decline is the sharpest since Q1 2026. The combination of a strong US jobs print (keeping real yields elevated) and Middle East ceasefire optimism (removing safe-haven demand) drove the metal sharply lower. A breakdown below \$4,300 would be technically significant.

8. RATES & FX (Friday 5 June 2026 close)

INSTRUMENT	LEVEL	CHANGE	DIRECTION
US 10Y Treasury Yield	>4.50%	+8-10bps (Fri)	Higher – payrolls shock; 30Y crossed 5.00%
German 10Y Bund Yield	~3.04%	Climbing	Higher – ECB hike uncertainty keeping supply premium
EUR/USD	~1.1650	Stable (approx.)	Range-bound; ECB vs. Fed divergence debate live
GBP/USD	~1.3430	Stable (approx.)	BoE on hold; UK data calendar light Friday
DXY (US Dollar Index)	~99.20	-0.3% (Thu)	Dollar slipped Thu on ceasefire optimism; May jump on NFP Fri

Key: The 30-year US Treasury crossing 5.00% is the most significant rate event this week. It signals that the bond market is repricing the Fed path from “cutting” to “on hold or hiking.” Bund yields following higher will pressure European credit spreads and weigh on long-duration European equity multiples. EUR/USD and GBP/USD levels approximate – verify on Reuters Eikon before use.

9. DCM – PRIMARY BOND MARKET

YESTERDAY'S ISSUANCES (5 JUNE 2026)

Friday primary market activity: European investment-grade primary typically quieter on Fridays, especially ahead of an ECB meeting week. Specific deal-by-deal data for 5 June not confirmed in sources accessed. Key structural context below.

ISSUER / SEGMENT	SIZE	TENOR	COUPON / SPREAD	IPT → FINAL
EU Commission (SSA)	EUR 11bn	n/a	n/a	First 2026 syndication; priced earlier in year
FIG / ESG (3 EUR banks)	n/a	n/a	n/a	ESG-labelled trades in pipeline for week of 8 June

Specific deal terms for 5 June: verify IFR / GlobalCapital before use

PIPELINE / EXPECTED WEEK OF 9 JUNE 2026

ISSUER TYPE	EXPECTED FORMAT	STATUS
European FIG (3 banks)	EUR ESG-labelled senior / covered	Mandated – ESG-labelled deals dominate FIG pipeline
SSA / Sovereign	EUR benchmark	Regular supply expected – EC EUR 90bn H1 2026 target
Corporate IG	EUR 5–10yr	Window dependent on ECB decision 12 June

Specific pipeline mandates: verify IFR / GlobalCapital for confirmed roadshows

KEY SPREADS (FRIDAY 5 JUNE 2026)

INDEX	LEVEL (BPS)	MOVE	TREND
iTraxx Europe Main (5Y)	n/a	n/a	Expected WIDENING on semi selloff + payrolls
iTraxx Crossover (5Y)	n/a	n/a	Expected WIDENING; HY sector under pressure
CDX IG (North America)	n/a	n/a	Expected WIDENING following rate shock
Avg Euro Corp IG spread	n/a	n/a	Verify Bloomberg / Markit before use

iTraxx levels require real-time Markit/ICE data. Not available in sources accessed this session. Directional signal only.

COMMENTARY

The primary market window is facing its first genuine test of the year. Friday’s simultaneous payrolls shock and semiconductor rout will force issuers to reassess print-and-sprint plans for the week of 9 June. With the ECB meeting on 12 June now a live event (hike vs. hold), issuers typically accelerate prints ahead of the decision. The ESG/FIG pipeline that was well-flagged may proceed if spreads stabilise Monday morning; purely corporate IG mandates in tech-adjacent sectors face a tougher reception. Industrials, transport, and SSA names are better positioned given their relative defensiveness and investor demand for carry. Any widening of iTraxx Main above prior week levels would signal a near-term shut window for lower-rated credits.

| 10. ECONOMIC CALENDAR

Saturday 6 June: No scheduled macro releases. Next key dates below (all times London BST).

MONDAY 9 JUNE 2026

All day	Japan: Bank Holiday (potential)	n/a	LOW
09:00 BST	Eurozone: Sentix Investor Confidence (June)	n/a	MED
TBC	ECB speakers / pre-blackout communications (12 June ECB meeting)	n/a	HIGH

WEEK OF 9-13 JUNE 2026 (KEY EVENTS)

Tue 10 Jun	UK: Unemployment / Claimant Count	n/a	HIGH
Wed 11 Jun	US: CPI (May) – critical given strong NFP	n/a	HIGH
Thu 12 Jun	ECB Interest Rate Decision & Press Conference	Hike or hold; 50/50	HIGH
Fri 13 Jun	US: PPI (May) / University of Michigan Sentiment	n/a	MED

Consensus forecasts: n/a – verify on Trading Economics / Econoday before use.

11. CORPORATE EVENTS & EARNINGS

Saturday 6 June: No scheduled earnings. Key upcoming events below.

DATE	COMPANY	EVENT	NOTE
Week of 9 Jun	SpaceX	IPO (expected)	Largest anticipated listing of 2026. Watch for pricing timeline.
2 Jun (recent)	Applied Aerospace & Defense (AADX)	IPO priced \$68/sh on NYSE	Raised \$1.68bn; space/defense exposure
4 Jun (recent)	Quantinuum	IPO; raised \$1.68bn on Nasdaq	Opened at \$68/share; quantum computing
22 Jun	Klarna Group plc	AGM (London + virtual; 15:00 BST)	Fintech / BNPL; post-IPO governance watch
26 Jun	Ermenegildo Zegna (ZGN)	AGM; EUR 0.12/share distribution	Amsterdam; luxury sector
26 Jun	H World Group (HTHT)	AGM (Shanghai)	China hospitality; watch for macro sensitivity

12. STOCKS TO WATCH – Monday 9 June 2026

COMPANY (TICKER)	SECTOR	REASON	DIRECTION
Marvell Technology (MRVL)	Semiconductors	Parabolic 7 unwind. Fell 8% Fri. Watch for dead-cat bounce vs. continued sell.	Likely WEAK
Micron Technology (MU)	Semiconductors / Memory	Down 13%+ Friday on Broadcom fallout. Memory cycle directly impacted. Korea proxy.	Likely WEAK
Broadcom (AVGO)	Semiconductors	Earnings catalyst for the selloff. -3.8% Friday. Further guidance discussion expected.	WEAK to NEUTRAL
Infineon Technologies (IFX.DE)	Semiconductors (Europe)	European proxy for global semi selloff. -4.9% Friday. Monday open critical.	Likely WEAK
ASML Holding (ASML)	Semis / Capital Equipment	-3.2% Friday; key EUV monopoly. Any stabilisation of SOX will see ASML bounce.	VOLATILE – watch level
Applied Aerospace & Defense (AADX)	Defense / Space	Recent IPO (\$68/sh). SpaceX IPO hype fueling sector. Watch for momentum or profit-taking.	POSITIVE bias
GE Aerospace (GE)	Aviation / Defense	Defense budget ramp-up tailwind. Sector showing strong buy signals per analysis.	POSITIVE bias
Howmet Aerospace (HWM)	Aerospace / Metals	Structural defense growth story; cited as flashing strong technical buy signals.	POSITIVE bias
Nvidia (NVDA)	Semiconductors / AI	Major losses Friday. Highest-profile AI name. Monday direction sets the tone for the whole sector.	Likely WEAK
Samsung Electronics (005930.KS)	Semiconductors / Memory	Kospi -5.5% Friday led by Samsung/SK Hynix. Watch for Asian session stabilisation.	WEAK – monitor Monday Asia open

Skew toward aviation, defense, semis, and energy as requested. Directional signals are indicative only – verify price action at open.

13. MACRO / CORPORATE / POLITICAL HIGHLIGHTS

MACRO

US Labour Market Tightening: May NFP +172,000 vs. ~130,000 expected. Unemployment rate unchanged. Wages: n/a (verify). The Fed faces a dilemma – previously expected to cut in June, now on hold. Market pricing sharply re-rated.

ECB June Decision – Hike or Hold: Survey-based consensus in early May flagged two 2026 ECB hikes; by mid-May the June move was uncertain. Bund yields at 3.04% reflect this ambiguity. Decision 12 June. Lagarde press conference will be key for forward guidance on subsequent moves.

Inflation Drivers: Energy inflation from Middle East risk premium now partially reversing as ceasefire talks advance. No broad spillover from energy to core yet, per ECB assessment. US core inflation driven by services; CPI print 11 June critical.

China Growth Buffer: Shanghai Composite outperformed Asia Friday (-0.3% vs. Kospi -5.5%). Domestic stimulus measures continuing to insulate China's market from global AI/tech contagion.

CORPORATE

Broadcom Guidance Miss – AI Trade Repriced: Q3 AI revenue guidance ~\$16bn vs. ~\$17.2bn expected triggered the largest semiconductor sector sell-off since 2020. The “Parabolic 7” trade (Marvell, Micron, SanDisk, Intel, AMD, Broadcom, Dell) unwound heavily. SOX -10.3% in a single session.

Space/Defense IPO Wave: AADX IPO (\$1.68bn), Quantinuum IPO (\$1.68bn) both priced in early June. SpaceX IPO expected June 2026. Defense budget growth globally fueling M&A and public market issuance in the sector.

European Bond Market Mid-Year Push: EC targeting EUR 90bn in H1 2026 syndications. ESG FIG pipeline building for week of 9 June. ECB meeting on 12 June creates a natural deadline for issuers to print before the decision.

POLITICAL / GEOPOLITICAL

Israel-Lebanon Ceasefire Talks: Progress reported Friday. Oil fell ~3% on the news. Risk: talks collapse and Brent spikes back above \$100. Market pricing in moderate-scenario resolution near-term.

US-Iran Nuclear Negotiations: Ongoing. A deal would release substantial Iranian oil supply, potentially pushing Brent sharply lower (<\$90). Failure or escalation could spike oil toward \$110+.

US Political Backdrop: Strong NFP data politically complicates any Fed rate-cut narrative before the November 2026 cycle. White House likely to emphasise labour market strength; pressure on the Fed to keep rates elevated.

14. KEY THEMES – TOP 5 BY HORIZON

TODAY'S TOP 5 (SATURDAY; SETS UP MONDAY 9 JUNE)

1. Semi Selloff Contagion Risk – SOX -10.3% Friday. Will Monday see stabilisation or second leg down? Broadcom management commentary over the weekend could be pivotal.

2. US Rate Re-Pricing – 10Y above 4.50%, 30Y above 5.00% post-payrolls. European credit spreads face widening pressure as risk-free rates surge.

3. Middle East Weekend Developments – Israel-Lebanon talks over the weekend could move oil sharply Monday morning. Any ceasefire confirmation: Brent further lower. Any breakdown: Brent spike.

4. European Open Tone – First test of European market resilience after the US/Asia selloff. Defensive sectors (energy, utilities) may outperform tech proxies.

THIS WEEK'S TOP 5 (9-13 JUNE 2026)

1. ECB Rate Decision (Thu 12 Jun) – Hike vs. hold. Either outcome is market-moving. A hike re-rates EUR rates and pressure IG spreads. A hold may rally bonds but confuse the EUR.

2. US CPI May (Wed 11 Jun) – First major inflation print after the NFP beat. High CPI + strong jobs = Fed completely on hold, risk of rate hike speculation. Low CPI = some relief, Fed on hold still.

3. Semiconductor Sector Recovery – Can Nvidia, AMD, ASML stabilise after Friday's selloff? Short-covering rallies typically follow SOX -10% sessions. Watch Broadcom commentary.

4. SpaceX IPO Timeline – Any formal roadshow announcement this week would be a catalyst for the entire defense/space sector and potentially a significant market event.

THIS MONTH'S TOP 5 (JUNE 2026)

1. SpaceX IPO – Expected in June. Likely the largest listing of 2026. Pricing and aftermarket performance will set the tone for the IPO market into H2 2026.

2. ECB Rate Path for H2 2026 – One hike in June opens the door to a second in July/September. This changes the duration risk profile for all EUR-denominated debt and equity. Critical for European DCM.

3. Fed Re-Pricing Post-Payrolls – June FOMC meeting (18 June). Markets had expected a cut; now pricing on hold. Any Fed hawkish surprise would extend the global equity/credit selloff.

4. Middle East Resolution or Escalation – US-Iran nuclear talks and Israel-Lebanon ceasefire negotiations will dominate energy market pricing through June. Oil is the key swing factor for inflation and central bank decisions.

5. DCM Window Assessment – Issuers and banks will assess Monday morning spreads to decide whether to print ahead of ECB on 12 June or defer to post-decision.

5. European Bond Issuance Window – Pre-ECB scramble: issuers with mandated deals may rush to price before the 12 June decision. FIG/ESG pipeline is the primary focus.

5. European H1 2026 Bond Issuance Completion – EC has a EUR 90bn H1 target. June is the last month of H1. SSA, FIG, and corporate IG issuers all racing to meet H1 funding targets before summer liquidity drops.

15. KEY TRENDS TO WATCH

1 DAY

Semiconductor stabilisation or second leg: Monday open in Asia (Nikkei, Kospi) is the first read. SOX -10.3% sessions historically see 50-60% short-covering bounce within 2 sessions, but fundamentals (Broadcom guidance cut) are real.

Oil response to weekend ceasefire news: If Israel-Lebanon ceasefire is formalised over the weekend, Brent could gap lower Monday morning. Watch \$90 as key support. A gap lower in oil benefits European transport and consumer discretionary.

European DCM Monday tone: Spread movements in the first 90 minutes of European trading will determine whether any pre-ECB issuance can proceed. iTraxx Main is the key gauge. Widening above 80bps would likely shut the window for sub-IG credits.

1 WEEK

ECB decision (Thu 12 Jun): The dominant event of the week. Consensus fracturing. A hike reprices EUR duration and widens credit spreads. A hold delivers a relief rally for duration but could weaken EUR vs. USD.

US CPI (Wed 11 Jun): The most important US data point of the week. An above-consensus print would confirm the inflation-is-back narrative and likely push US equities to fresh lows. A soft print could trigger a relief rally despite the rate-hike risk.

Defense/space sector momentum: SpaceX IPO speculation and the AADX/Quantinuum recent pricings create a sector tailwind. Any formal SpaceX roadshow announcement this week would be a major catalyst across defense and space names.

1 MONTH

AI trade re-rating: The "Parabolic 7" unwind is not a one-day event. Broadcom's guidance miss represents a structural slowdown signal in near-term AI chip revenue growth. The magnitude of re-rating across the entire AI supply chain (ASML, TSMC, memory) over June will define H2 2026 equity direction.

Central bank divergence trade: ECB potentially hiking while the Fed is on hold creates a genuine EUR/USD and EUR/US rate divergence. This will shape cross-currency swap costs for European issuers considering USD issuance and vice versa throughout June.

European H1 funding scramble: With two weeks left in H1 2026, SSA, FIG, and IG corporate issuers are under pressure to complete H1 funding programs. Volume targets and pricing pressure will drive significant primary market activity, regardless of spread volatility, over the remaining June trading days.
